## AUTHOR'S PREFACE.

This Etymological Dictionary is the natural sequel to my Historical Grammar. In that work I had traced out the history of French grammatical forms: that I might complete my task, and embrace the full cycle of the history of the language, I was bound to write also a history of its vocabulary. Accordingly, I have endeavoured in this volume to register for general use the results of philological enquiry, hitherto too much confined to a narrow circle of students.

It is not that philological enquiry has been lacking in France during the last three centuries. In the anarchical period of philology—the period between the sixteenth century and our day, during which philology was little but a confused mass of erudite errors two etymological Dictionaries were written, that of Ménage in 1650, and that of Roquefort in 1829. Seven years after the appearance of the latter work the illustrious Frederick Diez published at Bonn the first volume of his Grammar of the Romance Languages (1836), a comparative history of the six languages which have sprung from the Latin, in which he showed by what invariable laws Latin became French, Italian, Spanish, Portugese, Wallachian; and in so doing he created a scientific history of the French tongue. Thenceforth French philology was revolutionised; and, just as in the eighteenth century chemistry shook itself free from alchemy, so from this time the study of the French language became a science based on observation<sup>1</sup>, the progress of which was destined to be very rapid, under the influence of a spirit of exact investigation: the latest born of experimental sciences, it seemed likely to outstrip them all, except chemistry, in the rapidity and unbroken succession of its discoveries. Every new result is enrolled in its order in the three etymological Dictionaries which followed one another at intervals: in 1853 Diez published his Etymologischer Worterbuch; in 1862 appeared M. Schéler's Dictionary of French Elymology; in 1863 the first parts of M. Littre's admirable Dictionary of the French Tongue came out?.

This magnificent work was completed in 1873; and an Appendix to it published

in 1877.

It is but fair to say that a Frenchman, M Raynouard, had already prepared the way by a comparative study of the six Nco-Latin tongues; still to M Diez belongs the honour of having created the science by introducing into French philology an exactitude quite unknown before his time

These three works give us all the philological discoveries made in the French language during the last thirty years; and the chasm which separates them from the dreams of Ménage and Roquefort can only be compared to that which hes between the chemistry of Lavoisier and the aimless guesses of Raymond Lulli, Nicolas Flamel, or Van Helmont. It may therefore seem needless to wish to swell the catalogue with a new philological Dictionary; yet I have decided on writing this book, for there is a blank to be filled up. scientific subjects there is always room for two kinds of booksthose which, teaching established scientific knowledge, transmit our learned acquisitions in a collective form, and those which leave former discoveries alone, in order to attempt new research, to work out the solution or the discussion of problems hitherto untouched. Thus, in zoology, a treatise intended for the general public would be silent as to all doubtful or unsettled questions (such as the origin of species, or the like), and would occupy itself solely with the minute proof of established truths: if on the other hand the treatise were addressed to the narrower class of professed naturalists, it would be satisfied with simply stating known facts (assuming their proof to be known by the reader) and would set itself specially to elucidate by new observations or hypotheses those problems which were vet uncertain.

This distinction applies with equal force to etymological Dictionaries, according as they address themselves to students of philology only or to the general literary public. In the former case the author will chiefly attempt unsolved etymological problems, simply stating established etymologies without stopping to give the proofs: this has been done by Diez, Schéler, and Littré, who have been more anxious to discover or explore unknown regions than to describe the known. But by the side of these works, which assume in the reader a previous acquaintance with philological principles and a knowledge of the position of each question as it comes up, there is room for another Dictionary which shall take the science in its present condition, shall provisionally regard the etymology of all words whose origin is still under discussion as unknown, shall limit itself to the statement of etymologies already settled, and finally shall lay before the reader all the philological principles on which these interesting results depend. Of such a kind is this manual of the science of etymology which I have endeavoured to make, in the full persuasion that, imperfect as it is, it may yet render some service to the cause of highe, education.

As an example of the difference between the two methods, let us take the two words marcassin and pourrir. The etymology of marcassin is unknown; and while Diez and Littré discuss the hypotheses already started as to the origin of the word, and throw out new

suggestions, I content myself with the simple statement that here is a blank in our knowledge, and so I leave it: for in education uncertainty is worse than ignorance, and the maxim 'in dubiis abstine' finds its application. Under the word *pourrir*, of which the etymology (from Lat. putrere) is well known, Littré and Schéler merely mention the Latin word, and do not stop to explain; in my Dictionary, however, I set myself to prove it, and to show how putrere becomes *tourrir*, in answer to the questions, Why such and such a change? Have the Latin letters been altered by chance? or Is there any invariable law of change? Has putrere become pourrir all at once, or have there been successive changes, letter by letter? and can one fix the steps of the process in their chronological order?—questions which a Dictionary professing to teach the general public the science of etymology cannot possibly neglect. 'Scientific etymology,' says M. Bréal, 'does not consist in a vague statement of the affinity which may exist between two words; it must track out, letter by letter, the history of the formation of a word, and show all the intermediate stages through which it has passed.'

Thus, in the example taken above, one must show that the u of putrere has passed into ou (fourrir), as in ursus, ours; surdus, sourd; turris, tour; -that the Latin tr becomes rr, as in latronem. larron; nutrire, nourrir; -lastly, that the long o of putrore is represented by the French i, as in tenere, lenir; abolere, abolir, &c. The philologer, when he has reached this point, has done but half his work; he has shown that pourrir answers, letter for letter, to putrere. he must now show how this change has come about: we have as yet only the end-links of the chain, we must find the intermediate and connecting ones. Between the grub and the butterfly the naturalist studies all the different conditions of the chrysalis; between the Latin and the French we find, on the one side the Low Latin, on the other the Early French. Thus pourrir has not leapt at one bound out of putrere: Latin MSS, of the Merovingian period show us that the word became first putrire, then pudrire; whence the earliest French form fodrir, whence follow forrir and lastly pourrir. By what slow and almost insensible changes has the Latin word slipped into French!—tr has been successively softened into dr, thence into ir; u passes through o into ou; and, as one can prove by the steps taken, the Latin word has never achieved more than one of these changes at a time. Thus penetrating by means of a strict analysis into the innermost organisation of language, one sees that living words change

<sup>&</sup>lt;sup>1</sup> M. Bréal, Professor in the College of France, has admirably pointed out the dangers of a method which professes to explain everything, and does not know now to resign itself to be ignorant of many things.' For education nothing is so muschievous to the authority of a science as an inconclusive discussion.

and grow, and that in fact the Latin and French are only two successive conditions of one language.

By patient study, by careful comparison of thousands of little facts, insignificant by themselves, etymological science has been able to prove that languages, like plants or animals, are born, grow, and die, according to definite determinable laws. This fact saves us from the reproach of lingering over petty details. Every building raised on abstract ideas,' says Buffon, in his noble manner, 'is a temple dedicated to a lie.' It is high time that men should abandon metaphysical speculations as to the origin of human speech, and betake themselves to the humbler observation of facts: for these alone can lead us on to a just conception of the laws of language; and one may apply to them the saying of Quinctilian, 'Paiva quidem, sed sine quibus magna non possent consistere,'—these are doubtless details, yet without them general principles could not stand.

## TRANSLATOR'S PREFACE TO THE SECOND ENGLISH EDITION.

This Edition has throughout been carefully and minutely revised and corrected. The Introduction, which forms the chief difference between the English Dictionary and the French original, was, to a large extent, rewritten by M. Brachet himself; though he was interrupted, and the accuracy and completeness of the work much marred, by the siege of Paris in the winter of 1870, 1871, when the author was shut up in the capital. M. Brachet's plan was to transfer to the Introduction the bulk of those longer articles which occupied so large a space in the earlier part of the book, and, by breaking the whole up into numbered sections, to render reference from the body of the work to the Introduction clear and easy. This arrangement, in all main points, was carried out in the first English edition, though in some particulars, such as the treatment of the dentals, hquids, and nasals, it was left in an unfinished state; the references also were often not so accurate or full as they might have been.

These deficiencies have now, to a large extent, been made good, and the references diligently revised, corrected, or added. All the articles have been gone through; in each case with the help of M. Littré's splendid Dictionary, the Supplement to which, now just published, has been also called into use throughout; all considerable alterations made in M. Brachet's Dictionary by M. Littré's authority are marked with his name. In a few cases the origins of words which had been marked as 'unknown' have been inserted; in other instances the word 'uncertain' has been substituted for 'unknown,' as there are several French words the origin of which must have been one of two Latin words, although it is uncertain which of them is the true parent; in such cases the alternative has been stated. All mere conjecture has been carefully avoided. The misprints, inevitably numerous in the first edition of a Dictionary, undertaken as this

was under unusually difficult circumstances, have, so far as possible, been detected and set right; errors as to genders of nouns, verbs active and neuter, and the like, have been diligently watched for; inaccurate or insufficient renderings of the meanings of words corrected; finally, considerably over five hundred fresh articles added to the Dictionary, the words newly inserted having been selected from M. Littré. The Delegates of the Clarendon Press issue this amended and enlarged edition at a much reduced price, in the hope that it may not be beyond the reach of schools, and may take its place as a manual of education. If students can be taught by it to see how regular has been the growth of the French language, derived in almost all important cases from the Latin by even stages and under strictest rule of law, 'agis-ant,' as the French love to say of all things, 'par principes,' they will have learnt the first and most important lesson in philological study. The French language is in this respect more valuable for purposes of education than any other tongue; and for those who do not know the classical languages, the scientific study of its etymological phenomena must be of the highest importance. It is on this ground that we venture to express a hope that the work may find its way into the classrooms of girls' schools, in which it will add an element of precision, as well as of interest, to the teaching of the French language, which seems just now to be unfairly threatened by the growing favour shown to the study of German.

## INTRODUCTION.

### BOOK I.

## OF THE RULES TO BE FOLLOWED IN ETYMOLOGICAL INVESTIGATIONS.

Axiomata a farticularibus rite et ordine abstracta nova farticularia rursus facile indicant et designant, itaque scientias reddunt activas.—Bacon, Novum Organon, i. 24.

§ 1. ETYMOLOGY, which investigates the origin of words and the laws of the transformation of languages, is a new science. It is scarcely thirty years since it became one of the sciences of observation; yet the good work it has done has speedily won for it among the historical sciences a place which it can never lose.

Before attaining its present precision, etymology—like every other science, and perhaps more than any other—passed through a long period of infancy, of uncertain groping and effort, during which it subsisted chiefly on arbitrary relations, superficial analogies, and funciful combinations.

'One can scarcely imagine how arbitrary was the search for etymologies so long as it was a mere attempt to connect words at haphazard by their apparent resemblance, without any farther proof. The dreams of Plato's Cratylus, the absurd etymologies of Varro and Ouintilian, the philological fancies of Ménage in the seventeenth century, are known to every one. There was no difficulty in connecting jeine with jeine, for youth is the morning of life, and one rises fasting. Most frequently one word was derived from another of an entirely different form, by means of fictitious intermediate words, invented to fill up the gap. Thus Ménage derives rat from the Latin mus! "They must have said, first mus, then maratus, then ratus. then rat." Nay, farther, these guessers went so far as to suppose that an object could derive its name from a quality the opposite of that which that name denoted, because affirmation provokes negation; thus, for instance, they affirmed that lucus came from lucere, "quia non lucet."

At last, the dreams of etymologists became proverbial, and the whole subject fell into uttermost discredit. How then did this confused heap of crudite error give place to an established science of etymology? Simply by the discovery and application of the comparative method, the method of the natural sciences. 'Comparison is the chief instrument of science. Science is made up of general facts; scientific knowledge is the formation of groups, the establishment of laws; and consequently it elicits the general out of the particular. Now, if we would compel facts to surrender to us their inner meaning, we must draw them together, explain them by one another,—in other words, we must compare them.

'Every one knows something of the discoveries of comparative anatomy. We know how the study of the structure of animals, and the comparison of organs, the infinite modifications of which form the differentia of class, order, genus, have revealed to us what we may call the plan of nature, and have provided us with a solid foundation for our classifications.'

It is the same with the science of language: here, as elsewhere, comparison is doubtless as ancient as observation; but there are two kinds of comparison, or rather, two degrees of comparison through which the mind must pass in succession.

§ 2. The first kind of comparison is hasty and superficial; it was omnipotent in all physical sciences down to the end of the seventeenth century; it was satisfied with connecting beings or words by their superficial resemblances. Thus, naturalists called the dolphin and the whale fishes, by reason of their outer shape, their habits, their constant living in the sea; and etymologists derived the word paresse from the Greek  $\pi \acute{a}\rho \epsilon \sigma \iota s^2$ , because of all words they knew this was the one most like the French word, and they concluded, without any further proof, that this was the origin of paresse: an easy proof indeed!

These arbitrary comparisons have in our own days given place to thoughtful and methodical comparison, after an exact and scientific method, which is not satisfied with outer resemblances or differences, but seeks by careful dissection to penetrate to the essence and innermost analogies of things.

The anatomist now studies the internal structure of the whale, and discerns that the conformation of its organs excludes it from the class of fishes, and places it among the mammals. Similarly, the philologist, instead of studying the mere outside of a word, dissects it into its elements, the letters; observes the origin of these, and the way in which they are transformed.

1 E. Schérer, Études d'histoire et de critique.

<sup>&</sup>lt;sup>2</sup> See below, § 21, for the true origin of the word paresse, from pigritia.

It is by a strict application of this new method, by following facts instead of trying to lead them, that modern philology has proved that languages grow by invariable laws, and follow in their transformations certain necessary rules.

This book will lay out the principal characteristics of this natural Listory of language: it will be found that they furnish the etymologist with unexpected help; for they are, as it were, a valuable instrument, a powerful microscope for the observation of most delicate phenomena.

§ 3. The instruments of observation are, three in number: Phonetics, History, Comparison.

#### CHAPTER I.

#### PHONETICS.

§ 4. Take any Latin letter, and ask what it has become in French: you will soon see that it has suffered transition in a regular course, or, in other words, that each Latin letter passes into French in an unvarying way: for example, ē long usually becomes oi: as rēgem, roi; lēgem, loi; tēla, toile; vēlum, roile: ea becomes ohe; eaballus, cheval; eaminus, chemin; eanile, chemil: o becomes ou; tormentum, lourment; vos, rous; nos, nous; sorieem, seuris, &c. We give the name of Phonetics¹ to the collection of these laws of transformation.

The bearings of this discovery are plain enough; these laws of transformation once observed for each letter are a guiding line in investigation, and stop us if we are on a wrong track; an etymology which does not satisfy these conditions of phonetic change is null and void.

Thus then the knowledge of the sum total of these transformations of the letters from Latin to French<sup>2</sup> is the first condition which must be fulfilled if we would busy ourselves with etymology. If any one thinks this preparatory study too minute or needless, we would remind him that anatomy observes and describes muscles, nerves, vessels, in most minute detail: so vast a collection of facts may seem dry and tiresome; yet, even as comparative anatomy is the basis of all physiology, so is the exact knowledge of phonetics the starting-point for all etymology; from it alone the science gets its character of solidity and exactitude.

§ 5. We may then state this new principle as follows:—every etymology which does not, according to the rules of permutation laid

<sup>&</sup>lt;sup>1</sup> See below, § 37.

<sup>&</sup>lt;sup>2</sup> Ibid, §§ **46**, sqq.

down by phonetics, account for every letter retained unchanged, changed, or dropped, must be set aside as worthless.

Taking this principle as our guide, let us, by way of illustration, look for the origin of the word laitue. One sees at once that the letters it represent the Latin et, as is found in fait from factus; lait from lactem; fruit from fructus, &c. Thus then the first part of the word will answer to a Latin form lact; what however is the origin of the suffix -ue? Now we can prove that this suffix comes from the Latin suffix -uea¹, as in verr-ue, verr-uea; charr-ue, carr-uea, &c. Hence we arrive at the form lactuea, the actual Latin name for a lettuce.

Thus, in fact, the search for etymologies corresponds to researches in chemical analysis. When a substance is put into the crucible and reduced into its elements, the chemist ought to find those elements equivalent in weight to the original substance: in this case the elements are the letters, and the analysis—that is, the etymology—is uncertain until all the elements are accounted for.

§ 6. To sum up; etymological research is subjected to two laws:
(1) No etymology is admissible unless it accounts for every one of the letters of the word which it professes to explain; (2) In every etymology which involves a change of letters we must be able to produce at least one example of a change thoroughly like the one suggested; if we can adduce no such example, the attempted comparison between the two words is valueless.

#### CHAPTER II.

#### HISTORY.

§ 7. Every Latin word has undergone two successive changes in its journey into the present French language: it has passed out of Latin into Old French, out of Old French into Modern French: thus, festa became first fiste, then file. In searching for the origin of a French word it would be a great mistake to speculate on it only in its present condition, and to leap at one bound back to the Latin: we ought first to enquire whether any intermediate forms exist in Old French which illustrate the transition and mark the path through which the Latin word has passed down to us. These intermediate steps lead us up to the point of departure, and enable us to see with greater distinctness, and even sometimes to discover without any further investigation, the original word from which our French word comes.

IIISTORY.

One example will explain clearly enough the difference which separates the old from the new etymological method: formerly etymologists were much divided in opinion as to the origin of the word dme: some, thinking only of the sense, derived the word from the Latin anima, without being able to explain how the transformation was accomplished; others, thinking this transformation from anima to ane too harsh, derived it from the Gothic ahma The dispute would have still been unsettled had not modern philology intervened. Substituting for imagination the observation of facts, modern philologists laid it down that it is absurd to debate for ever over a word in its present form, without troubling oneself with the changes it has undergone since the first beginning of the language; and so, reconstructing the history of this word by means of the study of early texts, they shewed that in the thirteenth century it was written anme, in the eleventh aneme, in the tenth anime, a form which brings us straight to anima.

We can avoid mistakes only by observing step by step all the intermediate forms, so as to study the gradual transformation of the Latin word; yet even so, we ought to distinguish between two kinds of intermediates, those of the old and those of the new philological school. The first assumed at a venture a very dissimilar word as the origin of the word under enquiry, and then, in order to connect the two extremes, invented fictitious intermediates, which thus led them on to the point they wished to reach. Ménage, for example, fancied he found the origin of the word haricot in the Latin faba; and, to fill up the blank between, he added, 'People must have said faba, then fabarieus, then fabaricotus, aricotus, haricot.' It is like a dream, to listen to such lucubrations: they more than justified the laughter of the wits,

6 Alfana 1 vient d'equus sans doute, Mais il faut convenir aussi Qu'à venir de là jusqu'ici, Il a bien changé sur la route.' 2

§ 8. The intermediates which modern etymology demands are of a different kind: the science now no longer asks what people ought to have said, but what they did say. No more fanciful intermediates, invented as they were wanted: it is enough to trace the word through French texts from the nineteenth to the tenth century. Modern etymology notes the first appearance of words, and observes their changes age by age; nothing is left to conjecture or invention. And

Alfana is the name given by Ariosto to the steed of Gradasso. Ménage declares that it comes from equus.
 The epigram is by the Chevalier d'Aceilly.

this exact observation, though a preliminary, is an indispensable portion of every etymological investigation: before passing on to the analysis of a French word in its present state, one must try to find as many examples as possible of the word in Old French.

Littré, in his splendid Dictionary, follows this plan. Instead of inventing an arbitrary series of intermediates, he collects under each word a series of examples taken from actual documents, running back to the very origin of the French language. These landmarks once established, he goes on to discover the etymology, starting from the word as it stood at the very birthplace of the language.

The attentive observation of these intermediate forms is, next

after Phonetics, the most valuable guide in Philology.

This being granted, the comparison of Old French with Modern French—two successive states, in fact, of one language—is absolutely indispensable. How much better do we understand that modulus is the parent of *moule*, when we see the intermediate steps—the Merovingian Latin modlus, the old French modle of the eleventh century, the *molle* of the twelfth. This word becomes *moule* by the same change of ol into ou which we find in fou from fol, cou from col, &c.1 We need not have any doubts as to the meaning of the word deluvé one who will no longer let himself be deceived (leurré) - when we have before us the old form deleurre. In many cases we have lost the primitive form, which was in use in Old French, and have retained the diminutive, as alouette, mouette, belette, whose primitives aloue, moue, bele, are gone. We have no longer the old verbs tenter, freindre, pentir, œuvrer, vergonder, bouter; but we have their compounds, retentir, enfreindre, repentir, désauvrer, dévergondé, débouté : and it is important that the etymologist should know all these forms; for, before we find the origin of a word, we are bound to reduce it to its simplest form 2.

<sup>2</sup> Other examples of primitives lost in Modern French, but retained solely in their derivatives, are to be seen under the words—accabler, béant, compagnon, corset, créance, dernier, doléance, effron, émon, engeance, finance, galant, herboriste, issue, laitance, méchant, mécréant, nuance, outrecuidance, surcan, &c.

The chief reason why the French language is so perfect a model for etymological study lies in the fact that these intermediary forms have an ascertained existence. We may gather from this birth and development of the French language,—in a historical age, well-known to us,—how such languages as Latin and Greek (which are known only in their full age) came first into being. This enquiry into the development of languages, through the study of the French tongue, in which all the conditions required by the philologist are to be found, is analogous to the process in chemistry which is styled 'une expérience en russe close.'

#### CHAPTER III

#### COMPARISON.

§ 9. When the popular Latin gave birth to the French, it also created four other sister languages, formed, like the French, with amazing regularity and similarity—the Provençal, Italian, Spanish, Portuguese: these, as the Germans would say, are the Romance languages. It follows hence that we must use comparison between the Romance forms and the French, as a touchstone by which to verify and confirm our hypotheses. We have, for instance, just shewn that lailue answers letter for letter to lactuea. If this etymology is correct, the Italian lattuga, the Spanish latuga, must also come from the same word, their sense being also the same. Hence we may gather that the Italian tt and the Spanish ch, come from the Latin et, thus:

ITALIAN: notic from noetem; otto, octo; biscotto, biscoctus; tratto, tractus; &c.;—whence lattuga - lactuca.

Spanish: noche from noetem; ocho, oeto; biscocho, biscoctus; trecho, tractus; &c.:—whence lechuga = lactuea.

Thus one sees how a comparison of the Romance languages with the French confirms our preliminary observations and venties our hypotheses. These comparisons have a faither use: they often show us the route we may follow. The Romance tongues are intermediate in point of space between the Latin and the French, as Old French is in point of time: rouler seems less distant from rotulare when the gap is filled up by the Provençal rolar (early Prov. rollar) and Italian rotolare. Chou is directly related to eaulis, through Old French chol, Spanish col, Provençal caul: between coude and cubitus, we find the Provençal code, the old Spanish cobdo, the Italian cubito. The stages between *nourrir* and **nutrire** are filled up when one has passed through the three steps of Provençal norrir, Catalan nudrir, Italian nutrire. If, on the other hand, we study the chronological sequence of the transformations of nutrire into the French language, we shall see that the word was nudrire in Merovingian Latin, nodrir in the eleventh century, norrir in the twelfth, nourrir in the thirteenth: and thence we may conclude that it is a natural law of such developments, that the Romance languages offer simultaneously to our sight, and, as it were, in living examples, the same series of linguistic degradations and dead forms that the French language sets before us at different periods in its history: just as the globe shews us in different parts the successive formations on its surface, while at the same time we have those same beds ranged one under another in a vertical series !.

§ 10. By the side of these four Romance languages, the great divisions of the Latin tongue, we have 'patois,' which are secondary divisions under each language. We have shewn elsewhere 2 that at first there was no one literary language in French; and that the Latin was broken up into dialects corresponding to the different districts—Norman, Burgundian, Picard, French (i.e. the dialect of the inhabitants of the Ile de France). We know by what succession of political events, by the conquests of the Dukes of France, and the successive augmentation of the royal domain, three of these dialects were absorbed at last in the fourth, the French, which, as it rose to the rank of the one literary language, depressed the others into patois, which at this day are slowly dying out in the country districts. These patois are not, as is commonly thought, literary French corrupted in the mouth of peasants; they are the remains of ancient provincial dialects, which, thanks to political events, have fallen from the position of official and hterary languages to that of simple patois. The history of patois shews us their importance in the study of French etymology. Side by side with the four Romance languages, which form as it were four distinct colours, lie patois, filling up the intermediate spaces, and providing us with all the secondary and intermediate stages: thus regarded they throw a very strong light on many words. The bivalve shell, called in Latin musculus, is moule in French. How can we connect these words together, without passing through the Norman patois moucle, then the Languedoc mousele, which form the intermediate links? One can understand that fresaic and praesaga are the same word by seeing the forms presaie in Poitou, and bresague in Gasconv 4.

Even exceptions or corruptions of language often find their explanation in patois. Thus it seems very strange that the Old French *ombril* (the navel), from umbilieus, should have become *nombril*. But if we consider that the Old French *aim* (a hook), from hamus, has become *naim* in the modern patois of Touraine, by an euphonic

Other examples of the value of the comparison of Romance forms for French etymology may be found under the words courrous, guere, pou, tuer, &c.

<sup>&</sup>lt;sup>2</sup> In the Historical Grammar of the French Tongue, p. 18, sqq. English translation.

<sup>&</sup>lt;sup>3</sup> In the same way the Tuscan obtained the supremacy over all the other Italian dialects (the Milanese, Venetian, Neapolitan, Sicilian), which dropped into the position of patois; and in Spain also, the Navarrois, Andalusian, &c., gave place to the Castilian dialect, which became the literary language of the whole country.

<sup>4</sup> For other examples of the value of patois in etymological research, see under the words coulis, godet, levis, nombril, &c.

corruption of *un-aim*, into *un naim*, whence *le naim*, we shall find that we have a clear instance of the process which has converted *un-ombril* into *un nombril*, *le nombril*.

Thus one sees what help etymology can receive from the comparative study of patois. The linguist can also verify in them the following fact, which appears in all the Romance languages: namely, that in them, as well as in the patois, the Latin tongue becomes more dull and contracted the greater its distance from Latium. And thus the progress of the Latin word is a kind of sensitive thermometer, which falls lower and lower as we go northwards, by a sense of slow and insensible degrees, not by a sudden leap or instantaneous change.

#### CHAPTER IV.

#### VARIATIONS IN MEANING.

- § 11. OF the two elements, form and meaning, which make a word what it is, we have now considered the first, its form, 'm space and time,' as philosophers say—in space by means of Phonetics and Comparison, in time by means of History. The knowledge of the history and changes of meaning in words is also an indispensable instrument in the study of forms. In this branch of the subject we may study the history of the meaning either by following the changes in its own language, or by instituting a comparison, and setting the word side by side with words of the same signification in other languages.
- § 12. History of Meaning.—If we compare a number of French words with the Latin words whence they have sprung, we soon see that most of them have changed in meaning as they have passed from Latin to French, and have not retained their original significance and power. Thus, sometimes the meaning is wider: carpentarius (a wheelwright) becomes charpentier (a carpenter); caballus (a nag) has risen to nobility in cheval; minare (to guide a cart, or a flock) is mener (to lead generally); villa (first a farmstead or country-house, and then a hamlet) becomes ville, a town 1. In other cases the sense is narrowed: passing from general to particular—jumentum (every

<sup>&</sup>lt;sup>1</sup> For other examples of expansion of sense see the words abonder, abonner, activer, accorder, accoster, agneau, alarme, alerte, aller, arriver, battard, beugler, boucher, bourg, corbeille, corneille, &c.

kind of beast of burden) becomes *jument* (a mare); peregrinus (properly a stranger, one who travels) is restricted in *fèlerin* to travellers to the Holy Land <sup>1</sup> or some other holy place; arista (a fish-bone or an ear of corn) has lost its second meaning in *arele* (a fish-bone only); earruea (a chariot) becomes an agricultural cart in *charrue* <sup>2</sup>.

Sometimes the abstract Latin word becomes concrete in French: as punctionem (the action of pricking), tonsionem (of clipping), become poinçon, toison: similarly nutritionem, the action of nourishing, becomes nourrisson, one who nourishes himself, i.e. a nursling 3.

Sometimes, on the other hand, a Latin concrete word becomes abstract or metaphorical in French: thus ovieula (a sheep) has produced the word outsilles, which in French ecclesiastical speech is used of the flock of a spiritual pastor. It is clear that the French language, having before it the many rich and slightly different senses of the Latin word, takes one of these, regards it as if it were the only one, and thus gives birth to the modern signification.

§ 13. But these changes of meaning do not merely take place in the passage from Latin to French: 'Consuctudo loquendi est in motu,' says Varro (De Ling. Lat. ix. 17); and if we were to confine ourselves to observing the history of the French tongue from the eleventh century to the present time, we should find, even in the heart of the lunguage, many words whose sense has grown or shrunk as they have passed from Old to Modern French. Words formerly used in a noble or refined sense have fallen into the humblest and meanest condition: thus pectus (the breast) kept its original sense when it passed mto Old French; and pis (from pectus, like lit from lectum, confit from confectum) meant at first the breast or chest; in feudal speech a man was said, in taking an oath, 'mettre la main au pis,' to lay lus hand on his breast. The word has gradually been restricted and lowered to its present meaning. Mutare has become muer (so remutare, commutare are remuer, commuer). Muer, which had at first retained the whole energy of the Latin word (so Froissart says:

The Latin peregrinus (found in the form pelegrinus as early as in the Inscriptions) had already taken the sense of 'pilgrim' in Low Latin. Thus Mapes, De Nugis Curialium, i. 18, has 'Miles quidam a pago Burgundiae . . . . venit Jerusalem peregrinus.'

<sup>&</sup>lt;sup>2</sup> For other examples of restriction of sense see the words ainé, ampoule, ancêtre, andouille, apothicaire, appeau, arche, billon, bâilan, boiteux, brosse. brouette, couper, &c.

<sup>&</sup>lt;sup>4</sup> For other examples see barreau, chambre, chancellerie, &c.

'les dieux et les déesses muoient les hommes en bestes ') presently was restricted to the moulting of birds, the skin-shedding of certain beasts;—labourer (laborare, to work) was restricted at a quite late period to the sense of turning the soil. Oresme, in the fourteenth century, in translating the Ethics of Aristotle, says: 'Les excellens médecins labourent moult à avoir cognoissance des choses du corps' Marâtre (from matraster) meant only 'nother-in-law,' or 'stepmother'; it later came to mean a 'harsh and cruel step-mother.' Préau (from pratellum, like fléau from flagellum) is literally a 'little meadow,' and kept this sense in Old French; later '2 it was restricted to the meaning, a 'little meadow behind a prison,' where the prisoners take their exercise; thence, the prison-court '3.

Not only are there these narrowings and diminutions of meaning but also in some cases there are extensions and enlargements 4. Many terms of trade, or technical and special words, have thus entered into general use: as has been specially the case with hunting terms. Attraper was at first 'to catch in a trap'; leurrer to 'call in the falcon with the lure'; - one who refuses to be deceived by the lure is a déleurré (old form of the modern déluré). When a fakon was caught after his second moulting season, he was hard to tame and fierce, or, as the falconers said, hagard; whence Fr. hagard, Eng. haggard, came to have the sense of wild, then wan and wasted. But when the bird was taken from the nest, it was called mais (nidacem from nidus) and the weakness of young falcons gave the words niais, niaiseru, which express the simpleness and awkwardness of young people who 'are scarcely out of their nest.' Another term of falconry occurs in the phrase dessiller les yeux (formerly déciller). It was usual to sew up the eyes of falcous to tame them, an operation expressed by the word ciller: when the bird was tame enough, they re-opened its eyes (déciller) by cutting the thread which sewed together the eyelids (cils)?. It was, similarly, very natural that man should give to the machines

<sup>1</sup> Voltaire has still preserved this etymological signification in the lines 'Qui de Méduse cût vu jadis la tête Etait en roc mué soudainement.'

he has invented to economise his energy, or to augment the effect of his work, the names of animals which paid him service, or interested him by some fanciful analogy. Thus the Latin aries is a ram, a buttress, and a war-engine; capriolus has the two meanings of a goat and of a pronged fork used to turn up the ground: corvus is a raven, a grappling-hook, and a crane, &c. Similarly, the French language gives this kind of double meaning to several words: thus mouton is a wether and a rammer; con beau, a raven and a corbel; grue, a crane and the engine which bears the same name; belier, a ram and an engine of war; chèvre, a goat and a crane for lifting weights; *chevron*, a kid and a rafter. In many cases the earlier sense, that of the animal, has disappeared from Modern French, and that of the implement has survived alone: thus *foulte*, a beam, signifies also a mare in Old French: 'De toutes parts les poutres hennissantes, says Ronsard (sixteenth century). This word, originally politie, Italian poledro, comes from the Latin pulletrum, a derivation of pullus, a foal, a word found in the Germanic laws; thus in the Lex Salica, tit. xl. (sixth century), we read 'Si quis pulletrum furaverit.' Again, just as equuleus signifies a young horse and a block, and the French chevalet is a little horse and a buttress, so poutre passed from the sense of a mare to that of a beam by the application of that wellknown metaphor which likens a supporting piece of wood to an animal which bears up a burden 1.

So also land and water transport are assimilated, sea-terms being applied to land journeys: thus débarcadère, derived from débarquer, to disembark, is used for the terminus of a road or railway; the platform of a station is called quai, a whaif: some kinds of omnibus are called gondole or galère; coche signified first a barge for travelling, then a coach; from caboter, to coast from port to port, comes cabotin, a strolling player who goes from town to town, &c.<sup>2</sup>

§ 14. To complete this series we must quote some very singular metaphors which come from the vulgar Latin, and prove what a great part the common people took in the formation of the French language: from testa (a broken vessel), gurges (a gulf), botellus (a pudding), pellis (a fur hide), come the French tele, gorge, boyau, peau; and the classical words eaput, guttur, intestinum, eutis, are set aside. The French tongue adopted these metaphors from the vulgar Latin: testa means a 'skull' in Ausonius, botellus an 'intestine' in Tertullian. These fanciful metaphors of the Roman common folk are not at all astonishing, when we remember that in French slang a head is likened to a ball, the legs to skittles, the hand to pincers, &c. By the side of these metaphors, which are transmitted from the Latin to the French, there are a great number of native growth, which are

For other examples see *demoiselle*, *grue*, &c. For other examples see *canard*, &c.

charming in their simplicity: thus the people have given the name of bergeronnette (= petite bergère, little shepherdess) to the wagtail, a meadow-loving bird; the bourreuil (bovarious from bovarius, = a little bourier, or neat-herd) is the bullfinch, a bird which follows the herds, and lingers about in their neighbourhood.

§ 15. Comfarison of Meaning.—What we have already said is enough to shew how much more difficult at is to study the meanings than the forms of words. In dealing with the latter we have simply to deal with regular and observable changes. Climate and race have given to each of the peoples of Gaul, Italy, and Spain, a vocal apparatus differing in certain inflexions of pronunciation; and according to these, the Latin language has been transformed with an unchanging regularity into three different languages. This part of philology, which we call Phonetics, is in reality a part of Natural History, for it depends finally on the physical conditions special to certain families of languages and peoples. In fact it is as much dependent on material conditions as the study of meanings is independent of them. While the study of form can only have in view a single group or family of languages of common origin, the study of meanings attacks all languages alike, observes in all the progress of the human mind, and passes out of the domain of natural sciences into that of psychology: etymology draws largely on this comparison of metaphors, as it often accounts for and confirms the derivations suggested for certain words, even when we cannot give a full explanation of them. Thus, it seems curious that popular language should have called a certain bird (the wien) rottelet ( = 1etit roi, kinglet); the etymology, however, becomes absolutely certain if we compare the Latin, Greek, German, Dutch, Swedish, Spanish, and Portuguese, and find the same metaphor in all. This coincidence does not indeed explain how the name arose?, but it proves its existence, and the correctness of the derivation. Thus again it is easier to understand that the Latin eausa became chose, when one notices that the German Eache has the meaning of both these words. We are certain that chardonnet, the goldfinch, means the bird which feeds on the grains of the thistle, chardon, when we see that in Latin the bird is called carduelis, from earduus, in Italian cardellino, and in Greek dkarthe, from aκαιθος, in German Dutchfinf, the 'thistle-finch in Dutch distelvink.

<sup>2</sup> The origin of this metaphor must be looked for, under guidance of the principles of comparative mythology, in the legends of the Indo-Germanic races

The wren, routelet, is in all the following languages called by names which are connected with the word which signifies a king in each case: Latin, regulus, from regem; Greek, βασιλίσκος, from βασιλεύς; in German, βαιμέτωμα (the 'hedge king'); in Dutch, Winterkoningje (the 'winterking'); in Swedish, fugl-konung, and in Danish, fugl-konge (the 'bird-king'); in Spanish, reyexuelo, from rev; in Portuguese, reisete, from rev.

We have just said that bouvreuil, the bull-finch (from bovariolus, diminutive of bovarius, a neat-herd), signifies a little neat-herd; its English name bullfinch, and one of its German names, Bullenbeißer (the bull-biter), join in confirming this derivation. Contrée comes from Low Latin contrata ( = the land stretched out before one), and contrata comes from contra: here the German General from the prep. gegen ( = over against) explains and confirms the derivation. Defenier (to break one's fast) from jouner (like défaire from faire), is used of the morning meal, just like the English breakfast, which means exactly the same thing. Corset is a diminution of corps, a little body-a metaphor confirmed by like expressions in other tongues, as the German Leibthen (Leibe, a body); English boddice, from body; Italian corpetto (corpo, a body). It seems oute natural that habitus, which signifies an habitual manner of being, should become in French habit, dress, when we see that the Greek σχημα, and the Italian costuma have the same double sense of manner of being, habit, and clothing. It is by making a delicate and careful comparison of the operations of the human mind that the ctymologist is enabled to explain the origin of all such metaphors, whether they spring from capiece, or from the imagination of the people 3.

#### CHAPTER V.

#### Coxclusion.

§ 16. By shewing that words have growth and history, and that, like plants or animals, they pass through regular transformations—by shewing in a word that, here as elsewhere, law rules, and that it is possible to lay down strict laws by which one language is derived from another-modern philologers have established the firm basis of comparative etymology, and have made a science of that which seemed doomed to abide in the region of imagination and individual caprice.

2 We must not imagine from instances like this that the German language has taught the French its method of procedure: the resemblance springs from the identity of the operations of the human mind in general, and is not transmitted from language to language.

<sup>3</sup> For other examples of the value of this comparison of meaning in other languages see arborer, belette, belier, berner, blaireau, ble, boucher, bourdon, brochet, broder, cabus, chardonnet, &c.

<sup>1</sup> Originally written cors; the p was added by the learned after the fourteenth century. At first the word corset was not used, but corps (the corset being regarded as the body of the skirt): and in the eighteenth century, Rousseau found fault with the tightness of ladies' corps. Corset simply means a 'little body.'

Of old, etymology tried to explain à priori the origin of words according to their apparent likenesses or differences : modern etymology, applying the method of the natural sciences, holds that words ought to explain themselves, and that, instead of inventing systems, we ought to observe facts. This is to be done by the help of three instruments; (1) the History of the word, which by regular transitions leads us up to the derivation we are seeking, or, at any rate, brings us nearer to it; (2) Phonetics, which gives us the rules of transition from one language to another, rules to which we must absolutely submit, or we shall lose our way; (3) Comparison, which assures and confirms the results arrived at.

To the fantastic aberrations of learned men of old is due the discredit into which etymology has sunk; it is by the strict application of this method and these principles that comparative etymology has risen in our days to the dignity of a science.

1 For example, the etymologists of the seventeenth century deduced me, te, se, vos, nos, très, beur, from the Latin me, te, se, vos, nos, très, hora, without any suspicion that these words, which have certainly produced mot, toi, soi, vous, nous, trois, keure, could not possibly have produced anything else. They similarly deduced boucher from bouche (as being the man who caters for the mouth), while the history of this word shews that it means the man who kills the boue or buck; they derived cordonnier from cordon, forcené from force, while the Old French forms cordonamer and forsené prove at once that such derivations are impossible; similarly they connected éciper and écurie with the Latin equus, whereas it has in reality no relation whatever to either of them. We may, in fact, always feel safe in laying down as an invariable axiom in etymology the principle that 'two identical words are not derived from one another.'

<sup>2</sup> Were we not acquainted with the successive progress of etymological transformation, we could not believe that *fon* and peduculum, *âge* and aetatieum, *gril* and craticulum, *feu* and fatutum \*, were in reality the

same words.

#### BOOK II.

## ETYMOLOGICAL ELEMENTS OF THE FRENCII TONGUE.

§ 17. A very brief résumé of the history of the French Tongue

is necessary, if we would understand what is to follow.

The 'Vulgar Latm,' carried into Gaul by Caesar's soldiers and by colonists, quickly swallowed up the original Celuc language (see below, pp. xix-xxii): four centuries later it was deeply affected, as to its vocabulary, by the invasion of the Germanic tribes; more than five hundred German words establishing themselves in the Gallo-Roman language (see pp. xxii-xxiv). This language, thus modified by the introduction of barbarous words, and influenced by slow and insensible changes, became a new language, the French tongue, which in the ninth century shakes itself clear of the Latin language. Between the eighth century and the eleventh the French tongue advances, and in the twelfth century may be regarded as fully formed. ancient and popular foundation are added successively, in the thirteenth century, a number of Oriental words, introduced by the Crusades; in the sixteenth century a certain number of Italian and Spanish words; in the eighteenth, terms of German origin; in the nmeteenth, English words: to these must be added words borrowed by the learned from the Latin and Greek, between the fourteenth century and our own day.

To sum up, the French language has two great deposits of words: one laid down before the twelfth century, by the unconscious action of the people, and formed from the three elements, Latin, Celtic, German; the other later than the twelfth century, formed on the one hand of elements borrowed from the modern, on the other hand from

the ancient languages.

Thus then French words can be divided into three classes,—words of popular origin; words of learned origin; words of foreign origin.

#### PART I.

## ELEMENTS OF POPULAR ORIGIN.

#### CHAPTER I. .

#### THE LATIN ELEMENT.

§ 18. As we have shewn in the Historical Grammar of the French Tongue, we may study any language in four ways:—

1. We may study sounds, and consider the origin and history of

each letter; this is called *Phonetics*.

2. We may study words, the manner of their creation or deforma-

tion; this is called the Formation of Words.

3. When we have thus studied the constituent elements of words, and their aggregation, we may farther consider how words are modified when they are brought together; this is *Inflexion*, and is divided into declension and conjugation.

4. Lastly, Syntax shews us how words may be grouped together so

as to form phrases or sentences.

A review of these four divisions in succession is needful if we will describe the transition from Latin to French; the third Book of this Introduction will give us the rules which the Latin letters have followed in their transition into French;—we have elsewhere studied the changes which the Latin declensions and conjugations have undergone; how the article was created to replace the case-inflexions; how declension lost one gender, the neuter, and at first was reduced from six cases to two in Merovingian Latin and Old French, and then from two cases to one at the end of the thirteenth century; how conjugation lost the passive voice, how it created the auxiliary verbs the and avoir to take the place of the Latin compound tenses, how it gave a new form to the future: we need not, therefore, reconsider these purely grammatical points.

As to vocabulary, the French language, being the simple product of the slow development of the 'vulgar Latin,' is of necessity profoundly different from the classical Latin: sometimes the vulgar and the classical Latin had two different forms of the same word to express the same idea; thus doubler, avail, revair, come from the vulgar forms duplare, abante, ebriaea, while the classical forms duplicare, ante, ebrius, have produced no French words: at other

times the people and the learned employed two words of entirely different origin; thus it is not from the classical forms hebdomas, via, pugna, osculari, verti, but from the popular words septimana, caminus, batalia, basiare, tornare, that semaine, chemin, bataille, baiser, tourner, have been formed.

Many other Latin words have disappeared from different causes; some because they had not sufficient hold on the language, or sufficient power of resistance—as e.g. spes, which gave way to speres, a word found in Ennius; others because they would have produced the same form in French as was being produced by some other word of different meaning—as bellum disappeared because of bellus, beau; for the French word for 'war' derived from bellum would also have been beau. Lastly, many synonyms have perished,—thus fluvius, fleure, has overwhelmed amnis and flumen; janua and ostium have given way to porta, forte.

Next after these modifications of the Latin vocabulary we must enumerate briefly the changes introduced in the formation of words either in their derivation or their composition. Of these the most important is the addition of diminutive suffixes to Latin primitives, without any change in sense: thus we have sturnus, sturnellus, elourneau; corvus, corvellus, corbeau; passer, passorellus, passerauu. The 'Lingua Romana rustica,' the 'field-Latin,' had already shewn this influence when it gave to diminutives the full meaning of their primitives, as apicula for apis, cornicula for cornix, &c., whence we have in French chevreuil from capreolus, abeille from apicula, agneau from agnellus, &c., words in which the diminutive signification is entirely lost.

Many new substantives have been formed from existing verbs, and for this end other means have also been employed. The Latin language had the remarkable power of being able to make substantives out of its past participles: e.g. peccatum, properly the p.p. of peccare, scriptum of scribere, fossa of fodere. The French language has carried on this grammatical process, and has thereby produced thousands of substantives, as reçu, fait, di, the p.p. of recevoir, faire, devoir. This is also especially the case with feminine participles, as vue, étouffée, venue, avenue, &c.

Next after the past participle comes the infinitive, whence are formed about three hundred verbal substantives, answering to no Latin form, but derived directly from a French verb by cutting off the infinitive termination: thus, the Latin apportare, appellare, purgare, have produced the French verbs afforter, affeler, purger, and these verbs in their turn, by dropping the verbal ending, become the verbal substantives affort, appel, purge, which have no corresponding substantives in Latin. As however the Latin and French are but two

<sup>1</sup> For details, see the Historical Grammar, pp. 140, 141.

successive conditions of the same language, there is scarely any grammatical process in the French the germ of which cannot be found in Latin: so we find that the Latins also created verbal substantives by means of the infinitive; from notare, copulare, probare, &c., came the substantives nota, copula, proba.

Thus, too, it is after the Latin pattern that the French language has formed new verbs by means of the participles of existing verbs: from edere, cogere, quatere, detrahere, videre, the Latin had formed, by adding the infinitival ending to the participles editus, cogitus \*, quassus, detractus, visus, the verbs editare, cogitare, quassare, detractare, visere; and the 'nustic Latin' built a crowd of verbs on this plan; it rejected such primitives as uti, radére, audère, &c., and from the participles usus, rasus, ausus, produced the verbs usare, rasare, ausare, &c., whence have sprung the French verbs user, raser, over, &c.

These are the principal changes introduced into the structure of the Latin language by the inhabitants of Gaul<sup>2</sup>. We shall see in the Dictionary itself, and in the next book of the Introduction (*Phonetics*), through what intermediate stages the Latin, thus modified in inflexion, syntax, formation of words, passed before it reached its present state as Modern French.

#### CHAPTER II.

#### THE CELTIC ELEMENT.

§ 19. We need not again 3 discuss the reasons for the absorption of the Gallic language by the Latin: it is enough to state that, two centuries after Caesar's conquest, the Celtic tongue had all but disappeared from Gaul. Still that language did not perish without leaving behind it traces distinct if slight. Thus, the Romans noticed

¹ The subject of verbal substantives has been exhaustively treated by M. Egger, in an admirable article in the *Mémoires de l'Académie des Inscriptions*, 24. 2, a model of sure and acute scientific study, which leaves his successors no gleanings in the field which he has reaped.

<sup>&</sup>lt;sup>2</sup> There are many more modifications, which must be looked for in the body of the Dictionary; we here attempt only a general view.

See the *Historical Grammar*, pp. 4, 5. It is so difficult to describe the etymological elements of the French tongue without reproducing the history of the language, that the reader must excuse our frequent references to the book in which that history has already been given: the introduction of certain elements in the language can only be explained by a historical account of the vicissitudes of that language; and thus we have more than once repeated here what we have already said elsewhere.

that their galerita (the crested lark) was called 'alauda' by the Gauls; that fermented barley, their zythum, was in Gaul 'cervisia'; they accepted these words as incomers; and from them, six centuries later, sprang the French words alouette<sup>1</sup>, cervoise.

This is also true of bec, lieue, alose, braie, banne, arpent, brasscur, bouleau, marne, which answer to beecus, leuca, alosa, braea, benna, arepennis, brace (Pliey), betula, margula, words which Roman writers cite as borrowed from the Celuc. There are many other Latin words, said to be of Gallic origin, which have not descended to the French: such are ambaetus, bardus, druída, galba, rheda, soldurius. These isolated words, and certain other such 2, especially names of places, are all that are due to the Gallic language; and indeed, to speak more exactly, nothing is due to it, for even these words reached the French through the Latin; they did not pass straight from Celtic to French, but underwent translation into Latin first. In short, these words are so few that one may fairly say that the influence of the Celtic on the French has been inappreciable.

Thus, while the French nation is in the main Celtic, the French language has preserved but a few words which can be traced to a Celtic origin:—a singular fact, and one which shews even better than

history can do, how all-absorbing was the Roman power.

The Gallic language, thrust back into Armorica by the Roman conquerors, has survived, thanks to its isolation, for centuries; in the seventh century its strength was renewed by the immigration of refugees from Wales. The Bretons resisted the Frankish conquest even as they had resisted the Roman; the Low Breton patois, as it is called, of the present day is the direct heir of the old Celtic speech. It has a considerable literature, tales, national ballads, plays,—though they date no farther back than the fourteenth century. For a thousand years this Low Breton has been incessantly pressed, in its last refuge, by the French language, and is therefore now very different from the original Celtic: the original Celtic elements having necessarily suffered degradation from eighteen centuries of use, and, besides, many strange, that is, French, words having forced themselves in. And thus many Breton words run in pairs, the one old and of Celtic origin, the other

<sup>&</sup>lt;sup>1</sup> Alauda is not the immediate parent of alouette, but of aloue, which existed in Old French; alouette is its diminutive; cp. curvette and curve, amourette and amour, &c.

<sup>&</sup>lt;sup>2</sup> Bagage, balai, barre, bétoine, bildet, bille (a log), bouge, bran, brugère, bassin, claie, cormoran, crucke, darne, dartre, dru, galerne, gavotter, gober, goëland, goëlette, barnais, boule, jarret, lais, matras, pinson, pot, quai, rucke, sornette, toque, truand, vassal. newer, French in origin, and dressed up with a Celtic termination: thus the French word

Of these synonyms, the first column (egwirion, &c.) is composed of old words of Celtic origin; the second (just, &c.) of French words slightly altered. It would not have been needful to insist on this simple matter, had not some bold speculators in the eighteenth century, struck with this resemblance, concluded at once that such words as just, troublet, &c. were not French importations, but were rather the originals of the corresponding French words. Le Brigant and the illustrious La Tour d'Auvergne (as bad as a philologer as he was good as a patriot) declared that the French language was derived from the Low Breton<sup>1</sup>. They would have been rather astonished had they seen the proof that the contrary is the case, and that these words (just, troublet, &c.) instead of being the parents, are the children of the French language, being only French words corrupted and disguised under a Celtic termination. These etymological follies, which Voltaire derided under the name of 'a Celtomania,' formed the amusement of the eighteenth century; the 'Celtomaniacs' gave loose rein to their fancies, and declared that the Celtic was the language of Paradise, and that Adam, Eve, the serpent himself, talked Low Breton.

One would have thought that, after all the discoveries of modern philology, which has clearly proved the Latin origin of the French language, and has worked out by observation the laws of its transformation, there would have been an end of such fancies; on the contrary, the Celtomaniacs are as lively as ever, and we may read in the Memoirs of the Celtic International Congress, that 'France, whose magnanimity impels her to the four corners of the earth to succour the oppressed, will never allow the literature whence hers has sprung to languish at her side. The saying runs that the Pelican feeds her young with her blood; we have never heard that her brood have shewn themselves ungrateful for such unparalleled generosity. But

These unfortunate mistakes have also had a worse result—that of throwing undeserved discredit on Celtic studies. Instead of trying to prove that the French language springs from the Celtic, as the Low Breton philologers have done, they ought to have studied the Celtic in and for itself, and to have written the comparative history of the dialects of Brittany, Ireland, Scotland, and Wales, as has been done for Italian, Spanish, and French. It is to a German, Zeuss, that Breton philologists owe the completion of this task, in an excellent work, the *Grammatica Celtica*, published at Leipzig in 1853.

I am wrong:—such ingratitude does exist! The Celtic tongue has nourished all the languages of Europe, and specially the French, with her best blood: surely we cannot have to say of France what has never been said of the little Pelicans—she has forgotten her mother!

#### CHAPTER III.

#### THE GERMANIC ELEMENT.

§ 20. By the side of the vulgar Latin tongue, the basis of the French language, a very considerable number of German words have been brought by the Germanic tribes into the Gallo-Roman speech. Three successive strata of such imported words may be noted: (1) those prior to the invasion, introduced by the barbarians who served under the Roman eagles, such as burgus, used by Vegetius for a fortified work; (2) war-terms, feudal-terms, &c., which Franks, Goths, and Burgundians brought in with them; (3) a great number of sea-

terms, imported in the tenth century by the Northmen.

Under these three heads there are, in all, about 450 words: if we were to add German words imported into Modern French, the number might easily be doubled. This great invasion of foreign words seems to be the necessary consequence of the adoption of the manners and institutions of the conquerors. How could such ideas as those expressed by the words vassal, alleu, ban, mall, fief, be rendered into Latin, which had neither the things nor the names for them? When the conquerors substituted the feudal régime of the Germanic tribes for the monarchical and centralising organisation of the Roman Empire, they were obliged at the same time to introduce into the language words relating to their institutions; consequently, the titles of the feudal hierarchy and all terms referring to its political or judicial institutions are of German origin. Thus, such words as mahal, bann, alod, skepeno, marahscalh, siniscalh, &c., introduced by the Franks into the common Latin, became mallum, bannum, alodium, skabinus, mariscallus, siniscallus, &c., and when, together with the rest of the common Latin, they passed into French, they became mall, ban, alleu, échevin, maréchal, sénéchal, &c.2 These words, thus introduced, represent

<sup>1</sup> Congrès Celtique international, Saint-Brieuc, October 1867, p. 309.

<sup>&</sup>lt;sup>2</sup> These German words having been latinised by the Gallo-Romans, we will cite them as far as possible in their Latin form, which has between the German and the French. Thus, échevin is nearer to scabinus than to skepeno.

There are also two other questions connected with this subject, which have not yet been noticed: (1) the exact determination, in the case of each word, of the particular German dialect to which it belongs; (2) the date of its introduction into the Low Latin. There is but one class the origin of which we know, the sea-faring terms, which come, almost without exception, from the Dutch or the Norse. This uncertainty, and our

classes of ideas of very different kinds<sup>1</sup>; war, seafaring, hunting, are the most considerable, as may be seen by the following examples.

The following is a full list of these borrowed words, classified under

a few of the most general heads:-

1. Military terms:—arroi, auberge, balle, bande, baudrier, beffroi, berme, blinder, boulevard, bourg, brandir, brèche, brette, bride, briser, butin, cible, dard, desarroi, drille, écharpe, écraver, écurie, éperon, éper, esquiver, étape, étrier, fourrage, flèche, fourreau, frapper, gage, galoper, gonfalon, guerdon, guérite, guerre, guet, guichet, guide, hallebarde, halle, haubert, heaume, héberger, héraut, houseaux, housse, marcher, maréchal, marque, navrer, rang, rapière, targe, tréve, vacarme.

2. Seafaring terms:—agrès, amarrer, avarie, bac, bitte, bord, brasse, canot, caquer, chaloupe, cingler, crique, digue, drague, écume, élingue, équiper, esquif, esturgeon, étangue, falaise, foc, fresange, fret, gaffe, garer, guinder, halage, hamac, hauban, havre, hisser, hune, lisse, mat, matelot, mousse, quille, rade, radouber, tillac, vague, varangue, varech, voguer.

3. Hunting terms, names of animals, &c.:—augrette, baudir, bélier, blesser, bramer, braque, breuil, broncher, brouter, caille, canard, carpe, chopper, chouette, clabauder, clapir, crabe, crèche, croupe, écaille, échasse, échine, écrevisse, épeiche, épervier, épois, estrive, fanon, faucon, garenne, garou, gerfaut, glapir, grumfer, grincer, gripper, grommeler, hanche, hanneten, happer, hareng, hargneux, héron, homard, lécher, leurrer, madré, marsouin, mile, mouette, mulot, rat, rénard, rosse, rôtir, taudis, trappe, traquer.

4. Tules, and names of political or judicial institutions:—abandonner, alleu, ban, bedeau, carean, chambellan, échafaud, échanson, échevin, écot, fourrier, fief, franc, gabelle, gai, galant, hanse, hardi, haro, honnir, joh, liste, lot, malle, marc, mignard, mignon, nantir,

orgueil, race, radoler, riche, saisir, sénéchal.

5. Cardinal points and geographical terms:—dune, est, nord, ouest, sud.

6. The human body:—blafard, blémir, bosse, bot, brun, dandiner, danser, empan, forcené, gauche, giron, grimace, guérir, hocher, jaser,

laid, lippe, moue, nuque, raler, rider, rimer, teter, touffu, toupet.

7. The vegetable world:—alise, aune, bille, bois, bourgeon, brour, drageon, drèche, éclisse, élaguer, épeautre, émoussé, framboise, gale, gaude, get be, grappe, groseille, gruau, haie, haveron, hêtre, houblon, houx, lauhe, regain, roseau, saule, hwau.

8. The earth, elements, &c .: -flaque, frimas, gazon, gris, vase.

ignorance as to the ancient German dialects, have hindered us from giving (as we have done for the Latin element) a complete phonetic system for the words of German origin; we have only given, under each word, the chief examples which support the observed rules.

<sup>1</sup> This intermixture of German words affected only the Latin vocabulary; it left the syntax almost untouched, and was scarcely more than an acci-

dental and superficial disturbance.

9. Dress, &c.:—agrafe, brodequin, coiffe, cotte, étoffe, fard, feutre, froe, gant, goder, guimpe, guipure, haillon, laye, layette, milaine, rochet, touaille.

10. Instruments, &c.:—anche, banc, bloc, brandon, canif, clinquant, crampe, crampon, cremaillère, émail, étau, faulcuil, gaule, hanap, houe, huche, latte, loquet, manne, mannequin, noue, pincer, raper, tamis, tas, tonneau, tréteau, vilbrequin.

11. Dwellings:-échoffe, étal, étayer, étuve, gacher, halle, hameau,

hanter, hutte, loger, salle.

12. Food, &c.: -beignet, bief, bière, drogue, flan, gâteau, gaufre, saur, soupe.

13. Abstract terms, &c.: -affreux, agace, bafouer, blane, blette, bleu,

emboiser, émoi, gai, gris, guère, hair, hale, have, leste, sombre, sur.

14. Other words:—bisse, bouter, braise, brelan, brover, bin, bruée, choisir, choquer, clocher, cracher, dauber, déchirer, défalquer, déguerpir, dérober, drôle, éclater, effrayer, épeler, faude, fournir, frais, gaber, gagner, gamboison, garant, garder, gainir, gaspiller, galine, gauchoir, gehir, gletteron, glisser, gratter, graver, grenon, groufe, guerfir, guille, guiller, guise, harangue, hâle, jardin, lot, marri, meurtre, musser, regretter, river, rour, sale, siller, sillon, souhait, suie, suif, suinter, taisson, tarir, ternir, tirer, toucher, trâle, trop.

#### CHAPTER IV.

#### THE GREEK ELEMENT.

- § 21. The Greek language has given scarcely anything to the French since the time of its popular formation; it could not be otherwise, as the Gallo-Romans and Greeks never came into contact, and all the patriotic tales invented by Henri Estienne, Ménage, and others to prove the affinity between French and Greek, are mere fancies. The one city which could have brought France into connection with the Greek language, Marseilles, a Phocean colony, was early absorbed into the Roman Empire, and lost its Greek character and language. There are a few Greek words 1, such as chère, somme, farole, bourse, bocal; but these do not come straight from the Greek
- 1 We are speaking here of words of popular, not scientific, origin. We must also distinguish, in the case of Greek compounds, between those which existed in Greek, as ἀριστοκράτεια, aristocracie, and those which have been framed by French writers, as photographie, typographie, &c.; in the latter case we must study each of the elements of these new words, unknown to the Greek language; in the former case we should be wandering mto the history of the Greek language were we to decompose these words and their component elements. As for the numerous class of words introduced from Greek to Latin (such as allegoria, philosophia, caryatides, &c.), they have come to the French language through the Latin, and are therefore, for our purposes, Latin words.

κάρα, σάγμα, παραβολή, βύρσα, βαυκάλιον, but from the Latin cara, sagma, parabola, byrsa, baucalis, derived from the Greek; all these words are to be found in Latin authors of the seventh century. The discovery of the laws of transformation of Latin into French has given us the true origin of many words formerly regarded as derivatives from the Greek: thus, the chance likeness of paresse and πάρεσις had led etymologists in old times to connect the two words; but if we divide the word paresse into its elements, we shall see that the suffix esse must answer to a termination -thia (cp. tristesse, tristitia, mollesse, mollitia, &c.); such words as entière from integra, noire from nigra, shew us that the r of paresse answers to a Latin gr; the French a is the Latin i (as in balance, bilancia; aronde, hirundo, &c.); and thus we reach, by these three observations, the word pigritia, the true original of paresse.

To sum up, we may say of the Greek as of the Celtic; its influence on popular French has been altogether insignificant.

#### PART II.

#### ELEMENTS OF LEARNED ORIGIN .

§ 22. By words of learned origin we mean all words introduced into a language after the epoch of its formation<sup>3</sup>; that is, in the case of

<sup>1</sup> To this list may be added, adragant, bouteille, chimie, chômer, clopin, dragée, emeri, golfe, gouffe, migrame, over, flut, poèle, serm. Accabler, chaland, mangonau, are inilitary terms 'imported into the French language at the time of the crusades by the Byzantines. Two Oriental words, aroma and chicane, have passed into the language through the medieval Greek.

It is not always easy to distinguish between words of popular and words of learned origin. I have placed among the latter a very large number of words composed of two parts, the one popular, the other learned; sometimes a learned prefix has been joined to a popular word, as in ad-joindre, ad-mettre, dis-courir, dis-joindre, im-payable, in-clinaison, produire, pro-fit, sub-ordonar (words which should have been a-joindre, a-mettre, dé-courir, dé-joindre, en-clinaison, en-payable, pour-daire, pour-fit, souv-ordonner); sometimes a learned termination suffixed to a popular word, as in en-luminer, fer-meté, nourri-ture (which should have been en-lumer, fer-té, nourr-ure). Among these words we meet with some ghastly philological monsters, like in-surmontable, pré-alable.

The persistence of the Latin tonic accent (see § 49) is the rule and guide for the discovery of such words. All popular words introduced during the formation of a language respect the Latin accent, proving that they have been formed by the ear, not by the eye, and that they spring direct from the living and spoken language. All words which neglect the accent

the French language, between the eleventh century and our own day. They have been created, long after the death of the Latin language, by learned men and clerks, who got them out of books, as they needed them to express their thoughts, and who transplanted them just as they were into the French speech. Thus, in the eleventh century we find in some MSS, the word innocent, the exact and servile reproduction of innocertem: the French tongue had then no term for such a quality, and the writer, embarrassed in his attempt to express himself, was obliged to copy the Latin word. The learned origin of the word is shewn from the fact that it has not undergone those transformations which popular usage imposes on all the words it adopts; thus, in popular words, in becomes en (as infantom, enfant; inimicus, ennemi), and nocentem becomes nuisant; so that if innocentem had suffered popular transformation it would have become ennuisant, not innocent. Popular words are the fruit of a spontaneous and natural growth, learned words are artificial, matters of conscious reflection; the former are instinctive, the latter deliberate.

At first, each learned word, for some time after its introduction into the French language, remained as unknown to the people as scientific terms are in our day. The barons and villains of the days of Robert the Pious were as little able to understand the word innocent, as the labourers of our day are to comprehend the meaning of paleographic or stratification; as however there was no popular word for the thing, innocent presently passed out from learned into general use: it appears for the first time in ecclesiastical works; less than a century later it is to be found in the Chanson de Roland, and other popular poems; it has become a full citizen of France, having passed from the scientific and special vocabulary to the usual and dady language of men<sup>2</sup>.

In writing the history of the French language, it is necessary to state that it is in the popular part alone that we can grasp the laws according to which the instincts of the people have transformed Latin

are of learned origin. This distinction enables us to determine exactly the time when the French language took its birth;—the French tongue, that is, the popular and vulgar tongue, was born, and the Latin language was utterly dead from that day on which the people no longer spontaneously recognised the Latin accent. This was about the eleventh century; thenceforward the formation of the popular French is complete; all the rest is of learned origin.

These are words borrowed from ancient languages—at any rate, from Greek or Latin; as to words borrowed from modern languages, they will be found below, under the head of 'Elements of Foreign Origin' (§ 23).

<sup>&</sup>lt;sup>2</sup> Philologists who divide all languages into two deposits, the instinctive and the conscious, need not draw any distinction between learned words and what we call scientific words; for both of these are of conscious origin (whether they are in common use, like *innocent*, or technical, like *paleographie*); and besides, each word in common use whose origin is learned has begun by being a scientific term, employed by the few.

into French; from this point of view, learned words are useless to the philologist: this being laid down, it does not follow that learned words are therefore to be banished; they have proved their right to exist by existing; as M. Sainte-Beuve has rightly said, 'ils sont une des saisons de la langue.' When the French language was formed the popular speech was meagre 1, answering to the wants of a simple and unrefined state of society, and to the scality ideas of a warlike, agricultural, and feudal population; all scientific ideas, the property of the clerks, being expressed only in Latin. After a time feudal society was modified, then declined, lastly perished, and gave place to a new order; to express new ideas the French language had to enrich itself either by developing popular terms<sup>2</sup>, or by borrowing from the dead languages learned terms, which after a time passed into the common tongue. These borrowed words, rare in the twelfth and thirteenth centuries, and more numerous in the fourteenth, have become countless from the sixteenth downwards; they have increased directly with the growth of ideas and the daily quickening succession of inventions and discoveries 3.

#### PART III.

## ELEMENTS OF FOREIGN ORIGIN.

§ 23. In addition to the classes already considered there are many words of foreign origin, borrowed directly by the French from other living languages. These follow no fixed law, for they are the simple results of chance. Thus, a succession of marriages in the sixteenth

<sup>1</sup> In the French language there are not much more than 4000 popular primitives. See below, § 36, for the *statistics* of the language.

<sup>2</sup> By means of compounds, or fresh derivatives; as from règle have sprung in course of ages, derégler, déréglement; régler, réglementer, régle-

mentation, &c.

<sup>3</sup> I give only the immediate etymology, having neither time nor room for more. Thus I simply cite enormis as the primitive of *morme*; were I to go on and give the derivation of enormis (ex norma), I should have to write the history of the Latin language. Those who desire to know more of that history are referred to the valuable *Manuel des racines grecques et latines* by M. Bailly. It often happens, that after a Latin word has produced a popular French word, it produces, later on, a learned term; thus from rationem, raison, in popular French, comes later the learned ration; this process of double reproduction has received, from a seventeenth-century grammarian, the name of 'Doublets.' I have abstanced from dealing here with this subject, as I have already treated of this philological phenomenon in detail in a Dictionnaire des Doublets ou doubles formes de la langue française; Paris, 1868.

century between princes of the House of Valois and Italian princesses brought in suddenly a number of Italian terms: when France in the last century borrowed from England some of her judicial and political institutions, she also took the terms which expressed them. These instances show that a minute study of history, political, artistic, or colonial, will enable us to determine the precise part taken by foreign language in our vocabulary. On the other side, the attentive observation of early texts will teach us the age of these words, and will give us one more element of our knowledge by fixing for us the epoch of their introduction. Thus we know that plane ( = soft) is imported from Italy, partly because the word exists, with the same meaning, in Italian, partly because it does not appear in French musical writings till the end of the sixteenth century. Besides these à posteriori proofs. furnished by history, there are other à triori proofs, provided by philology, which enable us to declare at once that the word sought for is not of French origin, and point out to us its true source. These words have all entered in since the formation of the language: accordingly, they have not combined with it, nor have they received any of the characteristics which the French language impresses on those words which it assimilates. Thus, to refer again to the word piano; we have already considered it by the historical or  $\hat{a}$  pesterior i method; let us see what philology tells us about it. Piano, which answers to the Latin planus, cannot, à priori, be a word of French origin, for pl never becomes pi in French, but remains pl, - plorare. pleurer; plenus, plein; plus, plus, &c.; but more, piano must be of Italian stock, for in Italian only does pl turn into fi, witness plorare, piorare; plus, più; plenus, pano, &c. Thus it is seen how the laws discovered by philology often enable us even to anticipate in many cases the inductions of the historical method.

To enumerate according to the scale of importance the languages which have thus affected the French, we must begin with the family of the Romance languages (Provençal, Italian, Spanish, Portuguese): these have furnished the most. It was natural that the kindred languages should provide most: then comes the Teutonic family (German, English, Flemish). Modern Greek, Hungarian, and the Sclavonic tongues (Polish, Russian) have given some words. If we leave Europe, something is due to the Semitic languages (Hebrew, Turkish, Arabic), and also to the East Indian, Chinese, and Malayan. The American Colonies have introduced a few special terms into the French language.

We have now nothing to do but to lay before our readers a formal catalogue of all these borrowed words, and the history of these importations.<sup>1</sup>

<sup>&</sup>lt;sup>1</sup> As we have done in the case of Greek and Latin, we only give in this Dictionary the immediate etymology of the words borrowed from modern

#### CHAPTER I.

## Words of Provençal Origin.

§ 24. It will perhaps seem strange that I should have named the Provençal here as a distinct language, parallel with Italian, Spanish, Portuguese. The truth is that if we would really understand its importance, and the influence it has exercised over the French, we must cease to regard it in its modern form, as an obscure despised patois, and must look at it in its historical development: before its decadence it had, between the eleventh and the fourteenth century, a brilliant and flourishing existence.

The Provençal, or 'Langue d'Oc,' is the language of all the population of the Garonne basin, and of the southern part of the Rhone basin: it is the speech of a race of men quite distinct from the French of the North; it is parent of a brilliant lyrical literature, which in the thirteenth century was translated into German, admired by Dante, imitated by Petrarch; and lastly, it satisfies the two criteria which in a historian's eyes distinguish a language from a patois—it is the language of a people and of a literature. The philologist sees still more clearly the linguistic originality of the language when he compares it with the French'; though its age is equil, it has certain more archaic characteristics, which bring it nearer the Latin and give it the

languages; thus we shall see that the French dilettante is a ninteenth-century importation of the Italian dilettante (== amateur, person of taste); but it would be outside our sphere, and a part of the listory of the Italian Language, to go on and shew that the Italian dilettante comes from the Latin delectantem, like atto, frutto, &c., from actum, fructum, &c., by regular change of et into tt. Want of space forbids us to carry out the relationship between words of French origin and those of foreign origin which have a common root. Delectantem, for example, has produced the Italian dilettante, the French delectant; in the nineteenth century dilettante crossed the Alps and became French; it would be interesting to explain that delectant and dilettante are two forms of a common root, that dilettante is a 'doublet' of delectant, and that these two words form what we call a 'doublet' (see § 22, note 3).

¹ In the middle ages the southerners regarded the French language as so thoroughly foreign, that the Leys d'Amor (a kind of poetical and gramma'ical code of laws, written in the fourteenth century) says (ii. 318) of the French language: 'Apelam lengatge estranh coma frances, engles, espanhol, lombard'—'We mean by foreign tongues such as the French, English, Spanish, Lombard.' In 1229, in a municipal document of Albi. a notary excuses himself for not having read the inscription on a seal because it was in French, or some other foreign tongue: 'In lingua Gallica vel alia nobis extranea, quam licet literae essent integrae, perfecto non potuinus perspicere.'

same intermediate position between French and Italian that Provence holds geographically between France and Italy. But the course of events quickly put an end to this independent life. The rivalry between South and North which ended with the Albigensian war and the defeat of the South, gave a deadly blow to the Provençal

In the year 1272 Languedoc fell into the hands of France, and the introduction of the French language followed at once. The Provençal was no longer written; it fell from the rank of a literary language to that of a patois. The patois of Provence, Languedoc, and Gascony in our day are the mere wrecks of that 'Langue d'Oc' which in its time had been so brilliant. Yet it has left in the French language a great many terms of different meanings, introduced chiefly during the middle ages, since the twelfth century; and a few in modern times. These words represent the most different ideas; thus there are scafaring terms, aulan, cap, carguer, carre, corsaire, espade, gabarrit, mistral, vergue; names of plants and animals, bigarrade, cabri, carnassier, dorade, grenade, isard1, jigale, ortolan, radis: names of precious stones, cornaline, grenat; terms of dress, dwelling, horticulture, barette, bastide, cadenas, caisse, camail, cambours, pelouse 2; and other terms, such as badin, badaud, croisade, donzelle, facher, fat, forçat, malotru, ménestrel, jaser, roder, ruser.

#### CHAPTER II.

#### Words of Italian Origin.

§ 25. The expeditions of Charles VIII, Louis XII, and François I beyond the Alps, and the prolonged sojourn of the French armies in Italy, during the early years of the sixteenth century, made the Italian language very familiar to the French. 'The brilliancy of arts and letters in the Peninsula attracted men's minds at the very time when the regency of Catherine de' Medici set the fashion of admiring everything Italian 3.'

This Italian influence was omnipotent over the courts of Francis I and Henry II, and the courtiers did their best to make it felt throughout the nation. Then for the first time there appeared in the writings of the day a crowd of hitherto unknown words; terms of military art used by the French throughout the middle ages, such as haubert, heaume, &c., disappeared, and gave place to corresponding

<sup>8</sup> M. Littré.

<sup>2</sup> Add to these baladin, ballade, béton, câlin.

<sup>&</sup>lt;sup>1</sup> Peculiar to the Béarn patois, which has also given the word béret. Before leaving the countries which border on France, let us say that the Walloon has contributed ducasse, and the Grisons' patois avalanche, chalet, crétin, ranz.

Italian words, brought in by the Italian wars. From this time date terms of fence, botte, escrime; words relating to military usages and qualities, accolade, affront, altier, bravache, bravade, brave, bravoure; camp-words, fortification, alarme, alerte, anspessade, bandière, bandoulière, barricade, bastion, bastonnade, brigade; weapons, arquebuse, baguette, bombe, &c.

This mania for 'Italianisms' roused the just wrath of a contemporary, Henri Estienne: 'Messicurs les courtisans se sont oubliez jusque-là d'emprunter d'Italie leurs termes de guerre sans avoir esgard à la conséquence que portoit un tel emprunt; car d'ici à peu d'ans qui sera celuy qui ne pensera que la France ait appris l'art de la guerre en l'eschole de l'Italie, quand il verra qu'elle usera des termes italiens? Ne plus ne moins qu'en voyant les termes grecs et tous les arts libéraulx estre gardez ès autres langues, nous jugeons, et à bon droict, que la Grèce a été l'eschole de toutes les sciences 1.

And Catherine de' Medici brought in not only court terms, and words expressing amusements, but also terms of art, needed to express new ideas, which had come from Italy with Primaticcio and Leonardo da Vinci; such were architectural words, painters' and sculptors' words, terms of music, brought in at the end of the sixteenth and throughout the seventeenth century; commercial words also, sea terms, thief-language, names of plants, diminutives, and many others.

We subjoin a list of these borrowed words:-

1. Court-terms:—accolade, accort, affidé, affront, allesse, altier, banquet, bravade, brigue, camériste, canaille, caracoler, carrosse, cavaleade, caveçon, cocarde, corlège, courtisan, escorte, estafier, estrade, fanfreluche, grandesse, grandiose, imbroglio, incognito, page, paladin, partisan, sérénissame.

2. Names of games, &c.:—arlequin, baladin, bamboche, batifoler, bouffon, burlesque, cabriole, capot, caricature, carnaval, carrousel, comparse, entrechat, escapade, gala, gambade, jovial, lazzi, loto, mascarade, fasquinade, polichimille, prestidigitateur, quadrille, raquette, saltimbanque, tarot, tremplin, vollège.

3. Terms of art. Architecture:—arcade, archivolle, balcon, baldaquin, balustrade, balustre, belvedire, cabinet, campanile, casino, calafalque, cimaise, corniche, coupole, dome, façade, galbe, niche, paravent, pilastre, stuc, villa. Painters' terms:—aquarelle, calquer, canevas, carmin, diaprer, esquisse, estamper, fresque, gouache, grotesque, incarnat, madone, maquetle, modèle, mosaique, paletle, pastel, pastiche, pittoresque, profil, sépia, virtuoso. Sculptors' and other artists' terms:—artisan, bronze, burin, buste, camée, cicerone, concetti, diletlante, feston, filigrane, filoselle, girandole, improviser, madrigal, médaille, orviétan, panache,

#### WORDS OF SPANISH ORIGIN.

§ 26. The Wars of the League and the long occupation of French soil by Spanish aimies towards the end of the sixteenth century spread wide among the French nation the knowledge of the Castilian speech. This invasion, which lasted from the time of Henry IV to the death of Louis XIII, left very distinct marks on the French language. Hence come the names of many exotic plants and their manufactured products, as abricol, benjoin, cannelle, cigare, indigo, jasmin, jonquille. papale, limon, savane, labac, tomate, tulife, vanille; animals 1, anchois, cochenille, épagneul, mérinos, musaraigne, pintade; colours, albinos, alezan, basané, nacarat; parts of dwelling-places, alcôre, case, corredor; furniture, calchave, cassel ite, mantille; dress, basquine, caban, chamarrer, galon, mantille, pagne, sarate; confectionary, caramel, chocolat, marmelade, nougat; some musical terms, aubade, castagnette, guitare, sérénade; games, or enjoyments. dominos, hombre, poute, realer, sarabande, suste; titles or qualifications, duigne, grandesse, laquais, menin; sea terms, arrimer, cabestan, embarcadère, embargo, debarcadere, mousse, funte récif, subrécarque; infitary terms, adjudant, algarade, cabrer, camarade, cafaraçon, cafilan, caserne, colonel, diane, esconade, est a aon, haquenée, me artade, matamore, salade.

Abstract terms are rare, barbon, baroque, lizarre, casuisle, disparate, eldorado, hábler², faragon, risquer, soubresaut, transe. Créole, mulaire, mègre, come from the Spanish-American colonies, as also does hane, which is not to be found in literary Spanish. We may add that most of these importations are later than the time of Charles IX, with

<sup>&</sup>lt;sup>4</sup> Certain organs also, as *carapace*; or their products, as *basane*.

<sup>\*</sup> Håbler comes from hablar to speak, and answers to the Low Latin fablare from fabulari. As it passed into French the word took the signification of exaggeration in speech. It is curious that the same change has overtaken parler; the Spaniards borrowed the word in the seventeenth century from France, and have given to it the sense of boastfulness in speech. Ambassade came from Spain about the end of the fifteenth century.

the exception of a few words like algarade, which are to be found as far back as the middle of the sixteenth century.

The Portuguese language has given some words bearing on Indian and Chinese manners, as bayadère, bézoard, caste, fétiche, mandarin; one term signifying an ecclesiastical punishment, auto-da-fé; one of military discipline, chamade; and some names of fruits, abricot, bergamote, coco.

#### CHAPTER IV.

#### WORDS OF GERMAN ORIGIN.

§ 27. ALL French words of German origin are later than the middle of the sixteenth century. The religious wars, the Thirty Years' War, the German wars of the eighteenth century, have introduced a number of military terms, bivouac, blockhaus, blocus, chabraque, colback, fifre, flamberge, havresac, hourrah, lansquenet, loustic, obus, reitre, rosse, sabre, sabretache, schlague, vaguemestre; words expressing drink, pothouse terms, bonde, brandevin, cannette, choucroute, fleche, gargotte, kirsch, nouille; some names of animals, brême, élan, hamster, renne; some terms of art, estamper, graver; of dancing, valser; of seafaring, bábord². Mining industry, so general in Germany, has given a great number of specific mineralogical terms, bismuth, cobalt, couperose, égriser, embérize, gangue, glette, gueuse, manganèse, polasse, quartz, spath, zinc. Niekel is a Swedish word.

We have said above that French words of German origin are not earlier than the sixteenth century; this remark does not apply to words of Old German or Teutonic origin, which came into the Latin language between the tenth and the thirteenth centuries, and passed from the Latin into the French. These two classes of words are very distinct; the Teutonic words, in passing through the Latin, have lost their native form, and have gone through regular transformations before becoming French; the others, German words, borrowed straight from Modern German, and introduced in their natural state, break the general regularity of the language. The former unite closely and absolutely with the French, the latter are but superficially connected: in the language of chemistry, words of German origin mix only with the French, those of Teutonic birth enter into combination with it

<sup>&</sup>lt;sup>1</sup> Add, as debts to the Spanish, the name of one metal, *platine*, and of a typographical abbreviation, *cédille*. One word, *mesquin*, came in about the twelfth century.

<sup>&</sup>lt;sup>2</sup> House furniture owes to German some special terms, babut, édredon. Abstract terms are few, anicroche, chenapan, chic, and almost always bear a bad sense. The Flemish has given bouquin, the name of a plant, colza, and one name of a festival, kermesse.

#### CHAPTER V.

#### WORDS OF ENGLISH ORIGIN.

§ 28. Communications between England and France have daily grown more and more frequent from the time of the Restoration, and have brought with them a large number of English words. These refer to industrial pursuits, ballast, coke, express, flint, lias, malt, rail. tender, tunnel, wagon; agriculture, collage, drainer; politics, legislation. bill, budget, club, comité, convict, jury, meeting, pamphlet, toast, verdict, speech; banking, chèque, drawback, warrant; sundry moral states, comfort, humour, sphen; dress, carrick, chale, lasting, plaid, redungote, spencer; food, biflick, bol, gin, grog, pudding, punch, rhum, rosbif; racing, sport, amusements, bouledogue, boxe, break, clown, dandy, dogcart, fashionable, festival, groom, jockey, lunch, raout, sport, stalle, steeple-chasse, tilbury, touriste, turf, whist; medicine, croup; sea-terms. many of which are of old standing in the French language, accore, beaupré, bosseman, boulingrin, coaltar, cabestan, cabine, cachalot, cambuse, cutter, éterlan, flibustier, héler, interlope, loch, lof, paquebot, poulie, touage, vacht1.

#### CHAPTER VI.

#### WORDS OF SLAVIC ORIGIN.

§ 29. The Polish language has provided certain dance-words, polka, mazurka, redowa, the word calèche, and one heraldic term, sable. Russian gives cosaque, czar, knout, palache, steppe, cravache (though this last word travelled into France through Germany).

Besides the Slavic languages the Uralian tongues have also borne their very slender part in influencing the French language; Louis XIV having introduced the hussards, the new corps kept its Magyar name, huszár (=the twentieth), and some of its old technical terms, as dolman, shako. In the fifteenth century, horde, a word of Mongol origin, meaning in Tartar the camp and court of the king, was brought into France.

#### CHAPTER VII.

#### WORDS OF SEMITIC ORIGIN.

§ 30. The Semitic words in the French language are Hebrew, or Turkish, or Arabic. It was a pet notion of the old etymologists to

France also owes to the English the words square, billet, and alligator.

derive all languages from the Hebrew; the labours of modern philologists have shewn that such dreams were a vanity; and the most important result of modern philological science has been the discovery of the law that elements of languages answer exactly to the elements of race. Now the French belong to a very different race from the lews. and therefore the relations between the French and Hebrew tongues must be illusory, a more chapter of accidental coincidences. St. Jerome rendered the Old Testament out of Hebrew into Latin, he brought into his version a number of Hebrew words which had no Latin equivalent, such as seraphim, gehennon, pascha, &c., and from ecclesiastical Litin they passed, five centuries later, into French, sérabhin, géne, paque, &c. 1 But it is through the Latin that the French received them, and we may fairly say that Hebrew has had no direct influence on French. The same is true of the Arabic, whose relations to the French have been entirely matters of chance. Besides words expressing things purely Oriental, like Alcoran, babouche, bazar, bey, burnous, cadi, calife, caravane, caravansérail, chacal, emeterre, derviche, drozman, firman, gazille, genelle, girafe, janissaire, mimeluk, marabout, marfil, minaret, mosquée, narghilé, odalisque, once, pacha, sequin, sérail, sullan, talisman, turban, vizir, &c., which have been brought straight from the cast by travellers, the French language received during the middle ages several Arabic words from another source: the effect of the crusades, the great scientific progress made by the Arabs. the study of oriental philosophers, common in France between the twelfth and fourteenth centuries, have enriched the vocabulary with words bearing on the three sciences cultivated successfully by the Arabs, namely, astronomical terms, azimuth, madir, zénith; alchemist terms, alambic, alcali, alchimic, alcool, ambre, borax, clixir, julep, sirop; mathematical terms, algebre, algorithme, chilfre, zero; but even these words of exclusively learned origin, did not pass straight from Arabic into French, but passed first through the scientific medieval Latin.

The commercial relations between France and the East have also introduced a number of terms bearing on dress, babouche, toura in, colback, coton, hoqueton, jufe, taffetas; on building and furnishing, bazar, divan, knoopue, magasin, matelas, sofa; jewellery, colouis, perfumes, azur, carat, civette, laque, lazuli, naere, orange, tale; lastly, words which come under no special classification, amiral, café, échec, haras, hazard, mat, tamarin, truchement.

The frequent invasions and long sojourn of the Saracens in Southern France between the eighth and the eleventh centures have left absolutely no traces either on the southern dialects, or on the French language<sup>2</sup>.

We may add to this list the Talmudie words cabale and rabbin.
 See Reinaud, Invasions des Sarrasms en France, pp. 306, 307.

#### CHAPTER VIII.

#### Words of Eastern Origin.

§ 31. By words of Eastern origin are meant all those terms which have been brought by travellers from India, bambou, brahme, cachemire, carnac, jongle, mousson, nabab, pagode, falanquin, faria, &c.; from China, thé; from the Malay Archipelago, casoar, orang-outang.

The word zèbre is of African origin.

# CHAPTER IX. WORDS OF AMERICAN ORIGIN.

§ 32. The words collected in the three last chapters do not express French notions, and are, properly speaking, not French words at all; the same is true of local terms introduced into the language by the relations kept up between France and the American colonies. Such words are acajou, alpaga, ananas, boucanier, cacao, caiman, calumet, chocolat, colibri, condor, julap, mais, ouragan, quinquina, quinine, sagou, tabac, tapioca, talouer.

### PART IV.

#### ELEMENTS OF VARIOUS ORIGIN.

Under this head come all the words whose introduction into the language may be said to be purely accidental, whether their origin be historical, as the word  $Side^1$ , or onomatopoetic (due to the imitation of sounds), as *craquer*. After these, which will close the list of words of known origin, we shall come to a list of all the words as to which etymology has arrived at no definite conclusion.

#### CHAPTER I.

#### WORDS OF HISTORICAL ORIGIN.

§ 33. These words, few in number, are due to some accidental circumstance: this makes it all the more needful to recognise them properly; for if we were to shut our eyes to their origin, and try to

<sup>&</sup>lt;sup>1</sup> From Voltaire's Mahomet, in which there is a blind agent of the Prophet's will named *Séide*, the French form of the Arabic *Saïd*.

discover a scientific etymology for them, we should be sure to go wrong. If we were to forget that guillotine, macadam, manyarde, quinquet, are named after their inventors, and set ourselves to decompose them into their elements, with a view of finding, by the rules of permutation, their Greek or Latin origin, we should certainly fall into the most fantastic mistakes.

Words of historic origin almost always stand for concrete things or material objects, and especially, as is natural, for new inventions, or importations, as, for example, stuffs, astrakan, cachemire, calicot, gaze, madras, mousseline, nankin, rouennerie, from the names of places, Astrakhan, Cashmire, Calicot, Gaza, Madras, Moussoul, Nankin, Rouen, where these goods were first made; carriages, berleve, made at Berlin, flacre, Victoria, d'Aumont, &c.; vegetables, Dahlia, named after the botanist Dahl by Cavanilles in 1790, cantaloup, or melon,

cultivated at Cantaluppo, a papal villa near Rome, &c.

Abstract words are scarcer: such as jérémiade, from the Prophet, lambiner, from Lambin (d. 1577), a professor in the College of France, and famous for the immense length of his explanations, and the diffuseness of his commentaries. Other words are either invented by the learned, as gaz, which was created in the sixteenth century by Van Helmont the alchemist, or they are the expression of some ancient circumstance, as the word grève (= combination of working men) comes from the phrase se mettre en Grève, and this from the fact that under the old régime the working men of the different corporations used to assemble on the old Place de la Grève at Paris, to wait to be hired, or to prefer complaints against their employers before the Prévôt des Marchands 1.

#### CHAPTER II.

#### ONOMATOPOETIC WORDS.

§ 34. There are very few words in the French language which are formed 'onomatopoetically,' that is, by imitation of sounds. These express the cries of animals, báfrer, croasser, japer, laper, mauler; the

¹ The following is the list of French words of historic origin:—Amphrtryon, Angora, Artésien, Assassin, Atlas, Baïonnette, Balais, Baragouin, Barême, Basque, Béguin, Berline, Besant, Bicoque, Biscaien, Bougie, Bretteur, Brocard, Cachemire, Calepin, Calicot, Canari, Cannibale, Cantaloup, Carlin, Carmagnole, Carme, Casimir, Cauchois, Céladon, Chiner, Cognuc, Cordonnier, Cravate, Curação, Dablia, Damasser, Damasquiner, Dédale, Dinde, Echalotte, Epagneul, Esclave, Escobard, Espiègle, Faience, Fiacre, Flandrin, Florin, Fortange, Franc, Frise (cheval de), Futaine, Galetas, Galvanisme, Gavote, Gaze, Gilet, Gothique, Grève, Guillemet, Guillotine, Guinée, Hermine, Hongre, Inde, Jarnac, Jaquette, Jérémiade, Laconique, Lambiner, Louis, Macadam, Madras, Magnolier, Mansarde, Marionnette. Marotte, Maroquin,

phases of human speech, babiller, cancan, caqueter, chucholer, chut, fredonner hoquet, marmotter; certain conditions of size or movement, bouffer, bouffer, zigzag; some natural sounds, bruissement, clapoter, claque, cliquetis, erac, craquer, cric, croquer, fanfare, humer, pouffer, tic, toper; the speech of children, fanfan, maman, papa; and some interjections, from bah, ébahir; from hu, huer.

#### CHAPTER III.

WORDS THE ORIGIN OF WHICH IS UNKNOWN.

§ 35. We have now described all the known provinces of that vast domain which men call the French Language; there are other provinces which philology has not yet recognised or explored. The limits of these must now be carefully traced out on our linguistic map of the language; for the line which separates the known from the unknown cannot be fixed till we have made out the map of the former, and have fixed the frontiers of the provinces with which we are certainly acquainted.

This unknown region, as might be expected, embraces hardly any but words of popular origin, and gives us a collection of more than six hundred words of which the derivation is as yet undiscovered. It would be not strictly true to say that the etymology of all these words is unknown to us; there are very few of them as to which philology cannot give us several conjectures, each equally plausible; and it is quite certain that the day will come when the science, with more powerful instruments, will resolve all these problems 1; still, in the present state of our philological knowledge, these hypotheses can be neither verified nor refuted, and we therefore pass them by in silence, reckoning as unknown all those words as to which philology has not attained to any definite conclusion.

To reproduce discussions which lead to no conclusion would be contrary to the aim we have set before us; for purposes of in-

Marotique, Martinet, Mercuriale, Meringue, Mousseline, Nankin, Nicotine. Patelinage, Perse, Persienne, Phaéton, Pierrot, Pistolet, Praline, Quinquet, Renard, Ripaille, Robinet, Roquet, Rouennerie, Salsepareille, Sansonnet, Sardonique, Sarrasin, Séide, Serin, Silbouette, Simonie, Strass, Tartufe, Tournois, True, Turlupinade, Vandalisme, Vaudeville.

It is hard to foresee into what these 650 words will be resolved: a large and marked portion of them is certainly formed from words altered from the Latin or the Teutonic, and the action of degradation has been so great that it conceals from us their origin. The rest, doubtless less than one half, are sprung from, and will be traced back to, the indigenous languages, the Basque, the Celtic, &c., which were spoken on the Gallic soil at the time of the Roman Conquest.

struction, doubt is worse than ignorance, and in teaching the young we are apt to lose some of the fruits of knowledge unless the distinction between the known and the unknown is laid down clearly and without hesitation.

There are about 650 words of which the origin is unknown 1. The

following is a list of the chief ones.

Abri, accoutrer, aigrefin, aise, ajone, aloyau, amalgame, amphigouri, andouiller, antilope, antimoine, ardillon, ardoise, argot, armet, atteler,

attifer, aube, aumusse, auvent.

Babine, babouin, bâche, badigeon, baguenauder, balafre, balise, baliverne, balle, bancal, bancroche, barat, baratte, barder, barguigner, baril, baron, basané, bascule, bâtir, baudruche, bange, bedaine, bâgue, bêlitre, bereer, berge, berne, besogne, besoin, biche, bidon, bielle, biffer, bigarrer, bigle, bigot, bijou, bilboquet, billevesée, billon, bimbelot, bique, bis, bise, biseau, bisquer, bistouri, bistre, blaser, blason, blette, blond, blottir, blouse, bobêche, bobine, bombance, bombe, borgne, bosse, bot, bouder, boudin, boue, bougon, boulanger, bourbe, bourdon, bourreau, bousculer, bouse, braire, branche, brande, branler, braquemart, braquer, bredouiller, brehaigne, breloque, bretauder, bretello, bribe, briole, brimborion, brin, brioche, broc, brocanter, brou, brouire, bruine, bruire, bujfet, burette, butor.

Cabaret, cabas, cafard, cagot, cahoter, caueu, caillou, calembour, calefourchon, calotte, camard, camion, camouflet, cant, cauton, caramboler, cassis, catimini, chalet, chalit, chamailler, chambranle, chanfrein, charade, charançon, charivari, chassie, chific, choyer, en on, ciscau, civure, claquemurer, cocasse, coche (a notely), cochevis, colifichet, complet, concarge, copeau, coqueluche, coquin, corme, cosse (écosser), coterie, coli et, courge, crécille, crépe (a cake), cretonne, creuset, crotte.

Dague, dalle, débaucher, décruer, dégingandé, dégringolé, développer,

diner, disette, dodu, dorloter, doncine, douce, drap, dupe.

Eblour, ébouriffer, écarquiller, échouer, échabousser, échanche, écran, écrouer, ècrouir, égrillard, embaucher, émoustiller, empagne, endéver, engouer, enlizer, enticher, épargner, éparvin, ergol, estaminel, étancher, étoder, étoquette.

Fagot, falbala, falun, fardeau, farfadet, felon, feuillette, filou, flagorner, flanelle, flaner, flatter, foulard, fredaine, freluquet, frétin,

fricasser, friche, fricot, frime, fringant, fripe, friser.

Gadoue, gaillard, galet, galelas, galimátias, galvauder, ganse, garçon, gargote, gargouille, gargouse, gibet, gibier, giboulée, gifle, gigol, givre, se goberger, godailler, godelureau, gogo, goinfre, gonelle, goret, gosier, goujat, gourmand, gourme, gourmel, grabuge, graillon, gravier, gredin, grêle, gribouiller, gromoire, gringalet, grive, gruger, guenille, guenon, guéridon, guétre, guilleret, guimbarde, guinguette, guisarme.

<sup>&</sup>lt;sup>1</sup> This is calculated on the base of the *Dictionnaire de l'Académie*; if we were to include every unknown word in the language the number would be considerably larger.

Harasser, hardes, haricot, haridelle, heurter, horion, houille, houppelande, houspiller, hure.

Jachère, jalon, jargon, jauger, javarte, javelot, jucher.

Laie, laiton, lamboau, landur, laudanum, liais, liard, lice, lie, lingot, lopin, losange, loupe, luron, lutin, luzerne.

Mache, machicoulis, macquer, magnanerie, magot, mammouth, manganee, manivelle, maquereau, maraud, mare, marcassin, marmot, marmouvet, matelot, matois, matou, mauvais, mégissier, melèze, meringue, merisier, merlan, mièvre, mijaurée, mijoter, mince, mirliton, moellon, mognen, moquer, moquette, morgue, morlaise, morue, motte, mouron,

Nabol, nigand.

mulle, maser.

Omelette, orseille, quate.

Patois, patraque, patte, pépin, percale, percer, petit, pile (reverse, of coins), pilori, pumpant, pingre, pronette, pilon, pivot, pleige, pompe, fompon, pot lé, potron, preux.

Quinand, quintal.

Rabácher, rable, rabonerir, rabroner, racher; rafale, rainure, rataliner, raz, renfregner, requin, réve, rueaner, ruecher, ronfler, resser, ruban.

Sabord, sabot, salmis, sarrau, schile, semelle, serpillière, sobriquet, soin, sot, soubrette, souche, soupape, soupa nille, sournois, sparadrap.

Tache, taloche, tan, langage, laper, lapir, tarabuster tarander, tarte, tintamarre, trancher, trapu, truceter, trumbaler, trimer, tringle, tripot, tripoter, trique, trogne, trognen, trompe, truffe, trumeau.

Varlope, vasistas, vigie.

#### CHAPTER IV.

#### OF THE STATISTICS OF THE FRENCH LANGUAGE.

§ 36. Let us finally express in figures the chief results at which we have now arrived: although statistics are hardly in their right place here, and although we may not wish to follow Malherbe's precept, that it is very pretty to 'nombrer nécessairement,' we may apply to our subject M. Sainte-Beuve's excellent maxim, that il faul, tot ou tard, dans ce vaste arriéré humain qui s'amoncelle, en venir . . . à des règlements din passé, à des conceptions sommaires, fussent elles un feu artificielles, à des méthodes qui ressemblent à ces machines qui abrégent et résument un travail de plus en plus interminable et infini. We must not, then, press our figures too hard; they only express approximately the relations and proportion of the different elements which combine to form the French language.

## BOOK III.

## PHONETICS, OR THE STUDY OF SOUNDS.

§ 37. There are two objects which Phonetics set before them: first, the description of sounds, which are the elements of language; secondly, the study of the ough and history of these sounds when once we have clearly described them 1.

#### PART I.

## DESCRIPTION OF SOUNDS.

§ 38. Without attempting to describe the organs of the human voice, or encroaching on the sphere of the anatomist, we must still state in this place (though without endeavouring to prove our positions)

<sup>1</sup> I have already defined Phonetics (§ 4), and have shewn what help etymology gets from them; guided by these fixed laws of transformation of sounds in passing from a parent-language to its offspring, etymology is no longer obliged to trust to fallacious analogies of sounds or signification; it can usually tell beforehand the form which any particular Latin word naturally adopts in French.

The true place of Phonetics is under the head of Grammar, of which they are an integral part; and I have discussed the Phonetics of the French language in the *Historical Grammar*. It might have been enough to refer the student to that work; but as I am now endeavouring to lay before him for the first time the proof of every etymology, I wish have ready to hand the means of verifying and controlling my statements, and the complete collection of the transformations of Latin into French.

These two treatises on Phonetics are not the same. In the Grammar I limited myself to the exposition of the chief laws, with a few examples only; here, on the contrary, I lay down not only the list of facts which confirm the chief laws, but also most of the secondary laws and the exceptions.

the chief results which have been attained by physiology¹, in its researches into the mechanism of language and the classification of sounds. It is only by dissecting sounds that we can get a detailed account of the marvellous instrument on which, as Max Müller well says, 'we play our words and thoughts.' And, moreover, these physiological preliminaties are an indispensable prelude to the study of the history of the sounds of the French language.

- § 39. Whatever the human ear can perceive may be divided into two classes, *sounds*, or successions of periodical vibrations, and *noises*, or irregular successions of discontinuous vibrations. Sounds may be noted musically; noises cannot. The human voice is caused by a current of air emitted from the lungs, under the pressure of the thorax, vibrating as it passes across the vocal chords.
- § 40 If the current of breath reaches the open air without having been interrupted or troubled in its passage through the mouth, there is produced a sound, which we call a  $rowel^2$ .
- § 41. If, on the other hand, this current of air is suddenly stopped in its progress by any barrier, such as the tongue, teeth, or hps, the sound is spoilt, and instead thereof out comes a noise, known by the name of consonant; of these the different varieties are due to the differences in organs (tongue, teeth, hps), which thus interrupt the emission of the voice.

Thus, then, human speech is to be divided into two modes and forms; the consonant which is but a *noise*; and the vowel, which is a *sound*, and is consequently subject to certain musical conditions which we must now pass on to discuss.

¹ The two works of the highest value on this subject (placed in chronological order) are Brucke's Grundzüge der Physiologie und Systematik der Sprachlaute (Vienna, 1856), and Helmholtz's Lehre von den Tonempfindungen (Brunswick, 1863). Of these, the former has settled, quite finally or nearly so, the laws of consonants; the latter is all-important for the vowels. Both have been combined, and thrown into a short and useful form, by Dr. Rumpelt, in 1869 (Das natürliele System der Sprachlaute). I need not name Mr. Max Muller's admirable lecture (Lect. II. p. 103) on the same subject; it is a real elef-d'œuvre of penetration and clearness.
² Literally an emission of the voice; vocalis from vox.

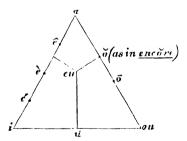

#### CHAPTER 1.

#### THE VOWELS.

- § 42. Setting aside the question of its duration, each note has three aspects:---
- 1. As to its *elevation* or tone; that is, its place in the scale of sounds. The elevation of a note is a result of the number of vibrations which take place in a given time. When we say that a st is more shall, or a higher note than a mt, we mean to say that st is produced by a greater number of vibrations in the same time than are required to produce the sound called mt.
- 2. As to its *power*; that is, the degree of intensity with which the note strikes the ear. This depends on the length of the curves of oscillation of the air-particles; or (as it would be phrased in acoustics) on the amplitude of the vibrations. When we sing a note softly we displace or set in vibration a less volume of air than it we were singing the same note at the full pitch of our voice.
- 3. As to its quality; that is, the timbre, or sonorous characteristics of a note. Thus, if we hear the same note sounded at the same moment on a violin and on a piano, why is it that we can distinguish the two? Whence comes if that these two notes, of the same elevation and power (identical, that is, in number and amplitude of their vibrations), are yet perfectly distinguishable? The answer is that the prano and violin have different qualities; they give, as one may say, two distinct colours, just as when we see the same object through two panes of coloured glass, one making it look green, the other red. Each instrument has us own peculiar quality; a colour which tinges each sound, and gives its timbre to it. This modification of sounds auses from the different shapes and materials of the mstruments which generate them; for these differences in shape and material naturally produce a corresponding difference in the form of the vibrations which create the sound. Whence then comes it that, in the case of two notes, identical in intensity and elevation, the form of the vibrations can produce this diversity of quality? This brings us to the theory known under the name of that of 'Multiple Resonance, or of 'Harmonic Sounds,' As long ago as A.D. 1700, Sauveur remarked that if the string of a clavichord be pinched tight, one hears at once, in addition to the note which has been struck, and at the same time with it (supposing the ear is sharp and practised), other notes which are more acute than the one struck, and which sound feebly through a sort of sympathy. These accompanying secondary notes, which emerge directly we strike a note, are called 'the harmonics' or 'resonant sounds': the experiment by

which the existence of these harmonics can be materially proved is well known:—if we put leaden soldiers on the notes of a piano, and then strike a note, all the men standing on the notes which are harmonics to the note struck will be upset, while the others all remain unmoved. Next, Helmholtz discovered the important fact that the harmonics which accompany each note vary in number and quality, according to the nature of the instrument; or, in a word, that the form of the instrument giving its own character to the vibrations, the harmonics were modified in different ways, while the note struck remained always the same; he shewed that this difference in the nature and intensity of the harmonics was in fact the cause of that difference in quality of which we have been speaking. This discovery, that the shape of the instrument modifies the form of the vibrations, and that this determines the different varieties of harmonics, whence come the varieties of quality, gave Helmholtz the clue to the explanation of the manner in which vowel-sounds are produced. Thinking that in order to pronounce each of the vowels a, i, u (the last to be sounded ou, as in Italian), we have to modify the form of the tube made by the cheeks, and that thereby we modify the form of the vibration, and thereby also we change the character of the harmonics, Helmholtz succeeded in proving that the different vowels are only the different qualities (or timbres) of the human voice, due to the different forms taken by the onfice of the cheeks, the mouth, during the emission of the voice.

§ 43. The gamut of vowels, as Helmholtz has established it, is u, o, a, e, i; the relationship and transformation of the vowels will be more visible by means of the vocal triangle, as Brucke determined it in  $1856^{-1}$ :—

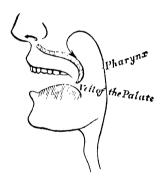

This triangle shows us the progress of vowel sounds as they pass through the phases of their transformation: thus o on its way to  $\ddot{u}$ 

<sup>&</sup>lt;sup>1</sup> In this diagram are given the sounds which exist in French or Latin. Brücke's triangle marks several other vowels, foreign to these two languages, and therefore not inserted or studied here.

must necessarily first pass through eu; and this law, directly established by physiological investigation, is confirmed by history, which shews that it has always existed, and has always been obeyed: thus Lat. morum became first O. Fr. meure, and is now mare; motum, O. Fr. meu, now ma. Is it not clear then, that the previous study of the physiological law of sounds is a very valuable guiding line for the history of the transformations of language? In fact, strange as it may seem, this preamble to etymological research is an absolute necessity. The human organs ever obey the same laws, and it is natural that we should employ the discoveries made by investigation into the living organ, if we would explain the changes of sound caused by the vocal organism of races which have now disappeared from the earth.

§ 44. By the side of these vowels which we have just studied, known by the name of 'pure or sonorous vowel-sounds,' we find a second class of vowels known as the 'nasal or muffled vowel sounds'; so called, not because they are really pronounced through

the nose, but because in pronouncing them the veil of the palate is lowered, and the air thus compelled to vibrate through the cavities which connect the nose with the pharyux: in fact, if while these sounds are being emitted, we close the nose altogether, we make the vowel still more strongly nasal, which shews that they cannot be formed through the nose. These nasal sounds, unknown to the Latins and to most European languages, are, we may say, a French speciality, represented by the following groups of letters, an,  $\epsilon n$ , in, on, un.

§ 45. In addition to these vowels, pure and nasal, are the diphthongs, or mixed sounds, made up of two vowels pronounced together

by a single voice-utterance: these we must consider next. Now, according as we rest on the first or on the second of these vowels, so shall we produce one or other of two kinds of diphthongs: those which are accented on the former vowel, as the Italian  $\delta i$  ( $\delta i$ ,  $n\delta i$ ), we will call strong diphthongs; and those accented on the latter vowel, like the French  $\rho i i$ , which we will call the weak diphthongs.

## § 46. Application of the above-stated Principles. Inventory of Latin Vowels.

- I. There are cleven Latin vowels:  $\hat{\mathbf{a}}$ ,  $\hat{\mathbf{a}}$ ;  $\hat{\mathbf{e}}$ ,  $\hat{\mathbf{e}}$ ;  $\hat{\mathbf{o}}$ ,  $\hat{\mathbf{o}}$ ;  $\hat{\mathbf{i}}$ ,  $\hat{\mathbf{i}}$ ;  $\hat{\mathbf{y}}$ ;  $\hat{\mathbf{u}}$ ,  $\hat{\mathbf{u}}$ . The pronunciation of  $\mathbf{a}$ ,  $\mathbf{o}$ ,  $\hat{\mathbf{i}}$  was identical with that of the French a, a, i;  $\hat{\mathbf{e}}$  was pronounced like the open French  $\hat{e}$  (as in ap);  $\hat{\mathbf{u}}$  like the French  $a\hat{\mathbf{u}}$ ;  $\hat{\mathbf{y}}$  was a sound unknown in common Latin, and imported into the learned language from Greece; it answers to French a, or to German  $\hat{u}$  in Muller, with, however, a somewhat more marked tendency to pass into a. The nasal sounds are unknown in Latin.
- II. The diphthongs. These are six in number, all of them with the accent on the former vowel: they are áu, éu, éi, úi, ae, oe. These strong diphthongs are pronounced as follows.—

'Au like German au (m. Saus), and answers to the combination of French letters dou: thus, durum was pronounced douroum: methe latter days of the Empire this dou became of methe speech of the peasantry; for Festus (p. 189) tells us that from the third century downwards the peasantry said orum, for aurum, orienta for auruenta (forum profourum rustici dicebant).

'Eu was pronounced éou (as in Italian Europa).

Et like the French ei in edle (in eorbedle), or like Spanish  $\acute{e}r$  (in  $r\acute{e}t$ ), or like Italian  $\acute{e}i$  (in  $\acute{e}\acute{e}t$ ).

**'Ui**, like the French oui, if the accent be shifted to the earlier part of the diphthong  $(\tilde{oui})$ , instead of oui): the Italian ui (in fui) exactly reproduces the Latin sound.

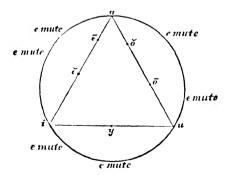

It is useless to say anything about the pronunciation of ae and oe, which at quite an early Latin period were transformed into  $\tilde{\mathbf{e}}$  (as in edus for hoedus, Mesius for Maesius).

## § 47. Further application of above stated Principles. Inventory of French Vowels.

I. The pure vowels. As is well known, the French alphabet is very badly constructed; for it has several orthographic signs for the same sound, and, on the other hand, is so meagre that it has to denote several different sounds by the same letter: thus, for the one sound o, it has the three signs o, au, and cau; while for the two

If we compare this list with the Latin vowel sounds, we shall see that the French language has gained the sounds  $\vec{u}$  and eu, and the closed  $\vec{e}$ , none of which existed in Latin; the letter u (which in Latin marked a sound equivalent to the French ou) is used in French to represent the new sound  $\vec{u}$ , and in order to represent the Latin sound, the ou group has been created, thus murum has become mur, while ursus is ours. Hence has come an unfortunate confusion: it would have been better to keep for the letter u the sound it already had in Latin, and to represent the Modern French u sound (as the Germans have it) by  $\vec{u}$ .

Another and more important gain to the French language is that of the vague sound indicated by the name of the e mute. This sound, unknown in Latin, is produced from every one of the Latin vowels: thus the Latin a, e, i, o, u, have all alike become e mute, thus a becomes e in rosam, rose; caballum, cheval; e becomes e in venire, venir; fratrem, frère; i becomes e in vestimentum, vélement; minutum, menu; o becomes e in conucla\*, quenounlle; and u becomes e in juniprum, genièvre; templum, temple. Now if we draw the Latin vocal triangle within a circle, the circumference will stand for the e mute, that sound to which, in French, all the Latin vowels descend when they become deadened; thus—

This loss of vocal power in the Latin final vowels had advanced far at the time of the fall of the Empire: and Inscriptions of that

period are full of such forms as domino for dominum (see Schuchardt), in which the final yowels are confused with one another and used one for another, a confusion which shews how very undecided their pronunciation had become: towards the seventh century all these vowels were lost in one common sound, which was between the French eu and o, an umform sound which really required only one sign, and has been represented in French orthography by the e mute. But this symbol was not adopted at once: in the very first specimen of the French language—the well-known Strasburg Oaths of AD, 8421 -we find, two lines apart, two different signs for the silent final vowels: thus the Latin fratrem is thrice rendered by fradre, once by fradra; instead of notre, peuple, Charles, we find nostro, toblo, Karlo, which is also written Karlo. This difficulty, experienced by the scube in rendering this new sound by a common and umform sign, may be seen at every step in the linguistic remains of the period between the ninth and the eleventh century. After that time e is always used to represent the mute sound. This letter was not chosen because it answered to the e sound (for that new mute sound would have been better represented by o or eu than by c), but simply because, as a matter of fact, of all the Latin final vowels, the e was the one which occurred the most frequently. But this e mute, which now is almost imperceptible in pronunciation, had, up to about the middle of the sixteenth century, a distinct and sufficiently marked sound (like the final o still heard in the pronunciation of the Provençal peasantiy, as in francéso, musico, tóxto, for française, musique, paste). Palsgrave, the old English grammanan, in his Esclaircissement de la langue françoise, A.D. 1530, says expressly (lib. i. regula 5, ed. Génin, p. 4): 'If e be the laste vowell in a frenche worde beynge of many syllables, eyther alone or with an s flolowynge hym, the worde not having his accent upon the same e, then shall he in that place sound almost lyke an o and very moche in the noose, as these wordes homme, fémme, honéste, tárle, hómmes, fémmes, honéstes, shall have thevr laste e sounded in maner lyke an o, as hommo, fammo, honesto, parlo, hommos, femmos, honestos: so that, if the reder lyft up his voyce upon the syllable that commeth nexte before the same e, and sodavnly depresse his voyce whan he commeth to the soundynge of hym, and also sounde hym very moche in the noose, he shall sounde e beyng written in this place according as the Frenchmen do. Whiche upon this warnynge if the lerner wyll observe by the frenchmen's spekynge, he shall easely perceive.' Then, passing from theory to practice, Palsgrave gives us (p. 56) the pronunciation as it ought to be: La trés honnorée magnificence (la-tres-ounoréo-manifisánso): secrétaire du roy nostre sire (secretáyro-deu-roy-nótro-síro); glorieuse renommée (gloricuzo renoumméo). This leaves us no room to doubt what was

<sup>1</sup> See the Historical Grammar, p. 14.

the pronunciation of the e mute at that time, and shews that it was plainly discernible.

# How to study the transit of the Latin Vowels into French, and the Rules of Accent.

§ 48. If we may compare words to a living organism, the consonants will be the bones, which can only move by help of the vowels, which are the connecting muscles. The vowels then are the fugitive and shifting part of a word; the consonants its stable and resisting part. Hence the permutation of vowels is subject to less certain laws than that of consonants, as they pass more readily from one to another.

The Latin vowels must be studied in two ways,—as to quantity, and as to accent.

- 1. As to their quantity;—they may be short like the e of ferum, long by nature like the e of avena, or long by position 1 like the e of ferrum. This distinction may seem trifling, but is really important: thus, for example, following these three differences of quantity, the Latin e is transformed into French in three different ways; the short e becomes ie (ferrus, fer); the long e becomes oi (avena, avoine); while the e long by position does not change (ferrum, fer).
- 2. As to their accent;—in every word of more syllables than one there is always one syllable on which the voice lays more stress than on the others. This raising of the voice is called the 'tonic accent,' or more simply, the 'accent.' Thus in the word raisón the accent is on the last syllable; in raisonnáble, it is on the last but one. This syllable, on which the voice lays more stress than on the others, is called the 'accented' or 'tonic' syllable: the others are unaccented, or, as the Germans name them, 'atonic'. The tonic accent gives to each word its proper physiognomy, its special character; it has been well called 'the soul of words.' In the French language the accent is always placed on one of two syllables;—on the last when the termination is masculine (as chanteur, aimér, finir, recevrá); on the penultimate when the termination is feminine (as róude, pórche, vóvage). In Latin also, the accent occupies one of two places; penultimate, when

<sup>&</sup>lt;sup>1</sup> A term borrowed from Latin prosody, which so calls words followed by two consonants, which are 'long by position,' not by nature.

In short, every word has one accented syllable, and only one; the rest are unaccented, or *atonic*; thus, in the word *formule*, the last syllable is tonic, the other vowels are unaccented; in Latin, in cantórem, the penultimate is accented, the others are atonic.

<sup>&</sup>lt;sup>3</sup> That is to say, when the word does not end with e mute; when it ends with e mute, the termination is said to be feminine.

that syllable is long (as cantórem, amáre, finíre), antepenultimate, when the penultimate syllable is short (rígidus, pórticus, viáticum).

We have just seen how important it is, with a view to the origin of the French language, to distinguish the quantity of the Latin vowels. It is still more important to distinguish their accent; the tonic and atomic vowels do not change into the same vowels in French.

We will now state the five rules of Phonetics: they are the fundamental laws for the transformation of Latin into French; the

charter of the constitution of the French word.

§ 49. The Latin Accent always continues in French; i.e. the tonic accent always remains in the French on that syllable which it occupied in the Latin word; whether that syllable was the penultimate, as in amáre, aimér; témplum, témple; or the antepenult, as oráculum, orácle; artículus, artícle; durábilis. duráble. Thus we see that the accented syllable is the same in each language.

In studying the fate of the other syllables, which are of course all atonic, we must distinguish between those which come after the tonic syllable, as the e of cantórem, and those which precede it, as the a of cantórem.

We will first consider those which follow the tonic syllable; they can occupy only one of two places, the last syllable, or the last but one, when it is a short syllable.

- § 50. II. EVERY ATONIC LATIN VOWEL, IN THE LAST SYLLABLE OF A WORD, DISAPPEARS IN FRENCH—Thus, mare becomes mer; amare, aimer; porcus, porc; mortalis, mortel; or, which is in fact the same thing, it is written as an e mute, as firmus, firme; templum, temple.
- § 51. III. When the penultimate of a Latin word is atonic, the Latin vowel disappears in French.—In words accented on the antepenult, as oraculum, tabula, artículus, durabilis, the penultimate vowel is necessarily short in Latin; this vowel was scarcely sounded at all; the refined Romans may have given it a slight sound, but the grosser popular voice neglected altogether such delicate shades of pronunciation. In all the remains of popular Latin that have come down to us (the Graffiti of Pompeii, inscriptions, epitaphs, &c.), the short penultimate is already gone: we find oraclum, tabla, postus, moblis, vinere, suspendre, &c.²; and when this common Latin passed into French, the words thus contracted became in turn oracle, table, poste, meuble, vaincre, suspendre, &c. Indeed, by the law which forbids the French language to throw the accent farther back than the penultimate syllable, it was compelled, if it would retain the Latin

<sup>&</sup>lt;sup>1</sup> We are not speaking here of words of learned origin; these rules refer only to words of popular origin.

<sup>&</sup>lt;sup>2</sup> In more than one case the short penultimate had already disappeared even in classical Latin, as in saeclum, poclum, vinclum.

accent in its proper place in words formed from oráculum, tábula, &c., to suppress the short u of the penultimate, and to say oracle, table, &c.

Having now considered the two classes of atonic syllables which follow the tonic syllable, let us go on to enquire according to what law atonics which precede the tonic syllable pass into French. These atonics may be divided into two classes: those which precede the tonic syllable immediately, as the o of derogáre, and those which are at a farther distance from it, as the o of derogáre.

- § 52. IV. EVERY ATONIC LATIN VOWEL WHICH IMMEDIATELY PRECEDES THE TONIC SYLLABLE DISAPPEARS IF IT IS SHORT, REMAINS IF IT IS LONG<sup>1</sup>.—It disappears if short, as sanitátem, bonitátem, positúra become santé, bonté, posture<sup>2</sup>. It remains if long, as coemetérium, ornaméntum, cimelière, ornement.
- § 53. V. EVERY ATONIC LATIN VOWEL WHICH PRECEDES THE TONIC SYLLABLE AT A GREATER DISTANCE REMAINS IN THE FRENCH.—Thus the o in positiva remains in the French posture; the a of sanitatem in sante; the o of vestimentum in velement.

#### CHAPTER II.

#### HISTORY OF THE LATIN VOWELS.

Thus, by help of the Latin accent, and the quantity of syllables, we have fixed the five laws according to which the Latin vowels disappear or remain in passing into French. Let us now reconsider these, and see whether the French language has retained intact the vowels it has received from the Latin, or has altered them, and, if so, after what laws. This study of Latin vowels in their nature must be thus divided—first the simple vowels (a, e, i, o, u), then the diphthongs (ae, oe, au, eu), and each of these subdivided into accented and atome.

#### HISTORY OF A.

§ 54. 1. The Latin a, when long by position, remains unchanged, as arbor, arbre<sup>3</sup>.

<sup>1</sup> For examples, see the Dictionary, s. v. able, affable, ancre, asperge.

3 In a very few instances it becomes e (see acheter), or ai (see aigle).

<sup>&</sup>lt;sup>2</sup> For examples, see the Dictionary, s.v. accointer, aider. I have also worked out these two laws in detail in the Jahrbuch für romanische Litteratur (Leipzig, 1867).

2. The Latin  $\tilde{\mathbf{a}}$  and  $\tilde{\mathbf{a}}$ , treated alike in French, become ai before the liquids l, m, n, if these consonants are followed by a vowel. This ai answers also to e, and is found under that form in the suffix ien (see ancien), which stands for iain by a slight alteration.

3.  $\tilde{\mathbf{a}}$  and  $\tilde{\mathbf{a}}$  may also become ai, by the attraction of the i, in words which have the accept on the antepenultimate, when the i is con-

sequently penultimate (see ailleurs from aliorsum).

4.  $\hat{\mathbf{a}}$  and  $\hat{\mathbf{a}}$  become e before the rest of the simple consonants; they become an open e before a consonant followed by r (br, h, dr, pr), as fratrem, frere; they become a closed e before mute consonants (see abbe), and before final consonants.

5. à and à become also ie in some words like canis, chien; gravis, grief; pietatem, filié; but this has been arrived at by passing through e, and then by strengthening the e with an i, which has

produced the diphthong 2.

#### HISTORY OF E.

§ 55. We have already said (§ 46) that the Latin  $\tilde{\mathbf{e}}$  was sounded by the Romans like the open French  $\hat{\mathbf{e}}$  in  $a/r\hat{\mathbf{e}}$ ; and  $\tilde{\mathbf{e}}$  was a similar though longer sound, like the French  $\hat{\mathbf{e}}$  in  $t\ell\ell e$ .

#### I.—Ě.

§ 56. The Latin ŏ becomes a diphthong ie in French (except before gutturals): as in férum, fier; měl, miel; fel, fiel; pedom, pied; těnet, tient; věnit, vient; pětram, pierre; febrim, fièvre; derètro, derrière; palpébram, paupière³: and this tendency to turn ŏ into a diphthong is so strong that it affects even the French è in position and treats it as ŏ before a simple consonant; as in pěd(i)ca, piège; lěp(o)rem, lièvre; těp(i)dum, tiède: eb(u)lum, hièble;

<sup>2</sup> a becomes i in cerasus, cerise; o in tabanus, taon; phiala, fiole; u in

calamellus, chalumeau; saccharum, sucre.

<sup>&</sup>lt;sup>1</sup> R in this case does not lengthen the preceding vowel by position.

<sup>&</sup>lt;sup>3</sup> Bref from brěvis, tu es from ěs, are not true exceptions to this rule; for in Old French the words were more correctly brief and tu ies: the words have been re-fashioned by the clerks and latmists of the close of the middle ages, to make them resemble more closely the Latin forms. The only true exception is et from ět. Such words as lépra, lèpre; ténébras, ténèbres; céléber, célèbre, are learned, not popular, words.

hēd(e)ra, lierre<sup>1</sup>. The history of this change of e into the diphthong e is short; it did not take place in Latin times, for there is no trace in the common Latin of that strengthening of the sound which is got by the change into this diphthong; still the common Latin bears witness in its own way to the need it felt of strengthening the short e; for we find it constantly written pe after the sixth contury: thus inscriptions and barbarous diplomas write paedem for pědem, facrum for ferum, paetra for pětra; an important fact, which shews, not that the Merovingians pronounced é as ae, but that they gave the è so much emphasis as to oblige the scribes to find a distinct symbol to express the new sound. From the ninth century downwards ie is found for ae (as eaclum, cirl, in the Song of St. Eulalia; 'Qu'elle Deo ranciet chi maent sus en cirl,' literally 'Quod illa Deum renegabit qui manet susum in caclo').

The only true exception to this rule is Dieu from Deum first became, in very early French, Dio, as in the Oaths of A.D. 842; it is written Deu in the eleventh century in the Oxford Psalter (Ps. 149, 6)°; then Diu, by change of eu into iu. Next, the accent was displaced, Diu becoming Diu, and the strong diphthong weak. Finally, Diu becomes Dieu, just as pius becomes fiaux. There are a few words which change fiaux before fiaux forcem, farouche; efferare, effarer.

- § 57. Let us pass to the case of § in a word accented on the antepenult, and followed by eus, ius, ia, ium: we shall see that it becomes we in lévium, liège; ministerium, miller; melius, O. Fr. miels, mienx; but i in impérium, emfire; pretium, frix; médium, mi; ingénium, engin; spécies, épice.
- § 58. Before gutturals ĕ and ĕ are treated in the same manner in passing into French; we shall therefore treat of these together, although this chapter properly deals with ĕ only.

 $\check{\mathbf{E}}$  and  $\check{\mathbf{e}}$  before a guttural pass into i (this influence of gutturals in like manner affects  $\mathbf{a}$ , by transforming it into ai): thus,  $n\check{\mathbf{e}}\mathbf{e}$ , ni; décem,  $di\mathbf{v}$ ; legit,  $lit^3$ ; peius, pis; verveeem, bicbis; and this tendency is a very early one, for we can trace

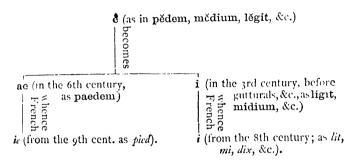

¹ The exceptions are gĕn(e)rum, gendre; tĕn/e)rum, tendre; which, however, are doubtless due to the intercalated cuphonic d, which grouped the consonants together, and weighted the word so heavily that it was easier to keep the short e than to pronounce the diphthong ie. Merle (mĕr u·la), was written correctly mierle in Old French, and transformed into merle by the learned.

<sup>&</sup>lt;sup>2</sup> For the accentuation of this Psalter, and its value as helping to fix the history and pronunciation of the French vowels, I refer the reader to my article in the *Revue Critique*, 1871, ii. 247.

<sup>\*</sup> Legit is written ligit in several Merovingian documents of the seventh century: this i was certainly pronounced very much like *ei*, and did not take the sound of *i* pure till after it had received its French form.

the change from  $\bullet$  into i even in the common Latin (as berbicom for vervecom in the Lex Salica). Before hard  $\mathbf{g}$  and  $\mathbf{e}$ ,  $\bar{\mathbf{e}}$  and  $\bar{\mathbf{e}}$  change to oi; as legom, loi; necare, nover (O. Fr. nover).

The chronological evolution of e may be expressed thus:-

#### II.—Ē.

- § 59. È is found to have taken the i form in early common Latin documents; and Inscriptions of as early a date as the second century (see Schuchardt, i. 104) are full of such forms as mercidem, dibet, virus, eadire, capire, tradire. This i must have had a sound intermediate between closed é and pure i (perhaps one something like that of the French ei in veille), for it has taken two different French sounds, as i on the one side (mercedem, mercidem, merci) and as ei on the other side, whence comes the oi of Modern French (thus verum, Low Lat. virum, Old Fr. veir, Mod. Fr. veir). We must consider these two developments of the Latin in detail, and trace the path by which they have at last arrived at two such very different results.
- § 60. To clear the way, let us begin by at once making out a list of the words which have sharpened into a pure i the natural tendency of the Latin ē to become i in Merovingian days: ē became i before a simple consonant (except the nasals) in the following words: mercēdem, merci; cēra, cire; berbēcem, brebis; prēsus\*, pris; pagēsis\*, pays; marchēsis\*, marquis; and sometimes even before a nasal, as in venēnum, venin; saracēnus, sarrasin; racēmus, raisin; pullicēnum, poussin; pergamēnum, parchemin².

In a very few instances, and before I and n only, ē continues unchanged: strēna, étrenne; eandēla, chandelle; erudēlis, cruel. All other instances of the continuance of the ē, such as sevērus, sevère; extradere as if extradére, extrader, are cases of learned words.

For the nasal sound of i in in, see § 73.

- § 61. Before the nasal consonants, e, after becoming i, is developed into ei; just as before the nasals a becomes ai (§ 54). This e, which became ei before a nasal at the very origin of the French language, was accentuated on the former vowel, and was pronounced sonorously, like the éi in Ital. léi. In the eleventh century we find in the Oxford Psalter (of which we have already spoken in § 56) the forms conséil, céint, viéil, véine; and, in the sixteenth century, Palsgrave gives us the true pronunciation of éi in his Example howe prose shulde be sounded' (Book i. p. 57). There he writes the phrase conseil de la souverayne, by the phonetic forms 'counséy de la souverayne.' After the sixteenth century ei was flattened into ei, then into e: thus vena was vina in Merovingian Latin, véine in the eleventh century, veine in the sixteenth, and now is pronounced vène, though still written veine, a form which remains as an orthographic indication of the former pronunciation. The like change is found in serena, sereine: verbēna, verveine; balēna, baleine; rēn, rein; plēnum, plein; frēnum, frein1; sometimes this et has dropt to oi, as avena, O. Fr. avene, Mod. Fr. avoine; fenum, O. Fr. fen, now foin; sometimes it goes vet further, and reaches ai, as terrenum, terrain2. In a few cases of becomes a, as ēmendare, amender; rēmus, rame.
- § 62. Before a simple consonant (other than the nasals) ē becomes oi in habēre, avoir; sapēre, savoir; debēre, devoir; sedēre, scoir; mēsis\*, mois; bourgēsis\*, hourgeois; rēgem, roi; lēgem, loi; sērus, soir; vērus, voir; hēres, hour; trēs, trois; tēla, toile; vēlum, voile; in a few other cases oi has gone and is replaced by ai: thus theea, O. Fr. toie, taie; crēta, O. Fr. croie, craie; alnētum, O. Fr. Aunoi, Aunay; francēsis\*, O. Fr. François, Français.

But hitherto we have only stated the mechanical facts of these changes; we must also describe their history, and point out (1) how becomes oi; (2) how, and in what cases, oi becomes ai.

§ 63. How e becomes oi, and then ai.

We have seen already (§ 60) that before nasal consonants the classical Latin ê becomes i in Merovingian Latin, then a sonorous éi in the oldest French monuments, then was stopped in its progress, and was flattened to è. Before all other consonants, on the contrary, this development was not so suddenly arrested: thus debero, francesis, become successively debiro, francisis (seventh century), deveir, francesis (tenth century); at the end of the tenth century this

<sup>2</sup> In the body of the Dictionary will be found an account of the exceptions, rēmus, rame; sēbum, suif; sequere\*, suivre.

<sup>1</sup> Notice that ei is sounded like è when n has continued to be sounded, as in sereine, wine; while it takes the nasal sound of in in words of a masculine termination, such as frein, plein, in which the ein is sounded exactly like the in of venun, raisin: for this nasalisation, see § 73.

sonorous  $\ell i$  became a sonorous  $\ell i$ , and we get  $dev \ell i r$ ,  $fran e \ell i r$ ; by the end of the twelfth century this sonorous  $\ell i$  is softened into a sonorous  $\ell i$  is softened into a sonorous  $\ell i$  just as the old Latin foidere, Coilius became foedere, Coelius, so  $dev \ell i r$ ,  $fran e \ell i r$  changed their pronunciation and became  $dev \ell i r$ ,  $fran e \ell i r$  but it may be noticed that at the end of the twelfth century it was  $\ell i$  characteristic and uniform mark of French vocalisation, that it weakened all the strong diphthongs, and that the accent passed from the first vowel of the diphthong to the second: then  $dev \ell i r$ ,  $fran e \ell i r$  became  $dev \ell i r$ ,  $fran e \ell i r$  for the Modern French form has been made by the simple change of the strong diphthong into a weak one.

Let us now sum up this first period of the evolution of change by means of a table:—

Classical Latin .	•	٠ē
Merovingian Latin		. i
Tenth century .		. éi
Before A.D. 1050		. ôi
Aiter A.D. 1050.		. óe
Twelith century		. vé

From the fourteenth century onward a new evolution of of begins to take place, and this in two directions: (1) of advances towards a more closed sound; (2) towards a more open sound.

I. The closed sound.—Just as the Latin foemina, coelum, poena, coena, quickly took the weaker forms femina, celum, pena, cena, so did the French of in certain cases drop to the weaker  $\hat{\epsilon}$  (between the thirteenth and the fifteenth century): thus the pronunciation François, Anglois, dropped to the simple sound François, Anglois. This new sound is often, in documents before the seventeenth century, rendered by  $\hat{\epsilon}$ , which is its proper symbol; but for the most part the Old French spelling in oi was kept, as in François, Anglois, although it in no way answered to the pronunciation. In order to put an end to this discrepancy between the sound and the spelling, Nicolas Bérain (A.D. 1681?), and after him Voltaire, proposed to

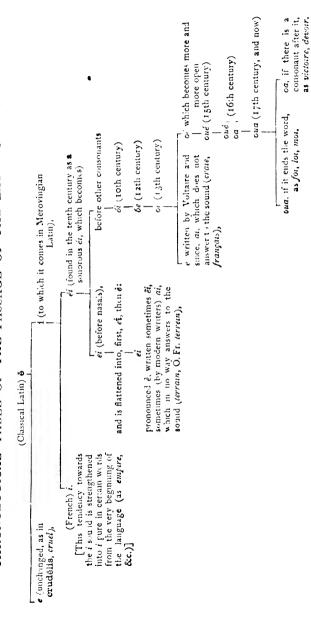

<sup>&</sup>lt;sup>1</sup> By sonorous oi I mean the sound of oi in the English word voice (which is also the Italian and Greek oi); that is to say, a strong diphthong, accented on the first part, in contradistinction to the sound of the Modern French oi, which is a weak diphthong, accented on the last vowel.

represent by ai<sup>1</sup> the sound so ill represented by ai; it would have been more logically proper had this sound, really an open e, been expressed by e; but ai was chosen, a symbol which simply still farther increases the orthographic difficulties of the French language. Adopted and pushed by Voltaire, the fashion of spelling with ai triumphed, and the French Academy adopted it authoritatively, to the exclusion of ai, in the sixth edition of its Dictionary (A.D. 1835).

- II. The open sound.—In another direction, of instead of becoming weaker constantly gathered strength. From ed in the fifteenth century it passed to the sound out, transformed in the sixteenth by popular usage into oua. Palsgrave, in his specimens of French pronunciation (A.D. 1535), Book i. p. 61, give us drait, victoire, pronounced as droat, victoare. Still this pronunciation of oi as oa, which was that of the Parisian citizens (as Henri Estienne tells us), was not at once adopted by the court and the literary circles: they retained the oue sound for more than two centuries. Mohère makes fun of the peasantry for saving oua for oi; and Louis XIV and Louis XV used to say un ouézeau (oiseau), la foué (foi), la loué (loi): the oua sound did not triumph finally till the end of the eighteenth century. The stage stuck to oue up to the beginning of the present century; and Lalayette in 1830 pronounced le roi, le reué. The oua sound,—which has two shades of pronunciation, our when it stands at the end of a word, as four (foi), lour (lot); and or when the word has a final consonant which is sounded, as devoir, gloire, victoire, - is expressed in French by or, which is the eleventh century orthography. This example clearly shews how in certain cases orthography falls far behind the progress of pronunciation.
- § 64. The study of the history and developments of the Latin e will best be shewn by the following table:—

<sup>&</sup>lt;sup>1</sup> This ai at a later time became confounded with  $\hat{\epsilon}$ , and finally supplanted it, very wrongly; for the two symbols  $\hat{\epsilon}$  and ai originally represented two entirely different sounds.

CHRONOLOGICAL TABLE OF THE PASSAGE OF THE LATIN 6 INTO FRENCH.

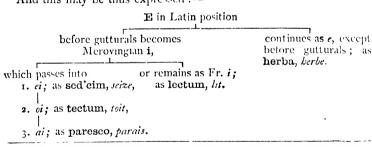

### III.—E in Position.

§ 65. E in Latin position (i.e. when followed in the Latin word by two consonants) remains unchanged: as herba, herbe; testa, tele; festa, fele; ferrum, fer; hibernum, hiver¹; except that before gutturals the e passes into the i form, under the usual influence (§ 58) of the guttural: and this either into i, as pectus, pis; lectum, ht; confectum, confit; sex, six; or into ci, as sed'cim, tred'cim, seize, treize; and later on this ei becomes oi, as tectum, hoit; ereseo (by transposition erecso\*), crois; directum (Low Lat. dirictum, drictum, O. Fr. dreit), droit; and finally becomes ai, as in pareseo (Low Lat. pariseo, O. Fr. pareis, then parois), farais. In a few cases (before m, n, r) e becomes a, as pergamenum, parchemin; inductile, enductile, andouille; necentem\*, néant; a change seen in late Latin, as in lucarna for lucerna; marcatum for mercatum.

For e becoming ei, oi, and ai, see §§ 61, 62, 63.

- § 66. Of E in French position (i.e. when followed in the French word by two consonants), as debita, deb'ta, delle, there are two cases.
- 1. ě is treated as if it were not in position, and follows the course of ě, which passes into ie (§ 56): as lép(ò)rem, lièvre; pěd(i)ea, fiège; tép(ĭ)dus, liède; ěb(ŭ)lum, lièble, &c.²
- 2. ē in position remains unchanged: as dēb(i)ta, dette; eler(1)eus, elere, &c.; quadrages(1)ma, careme; but centes mus becomes centreme and centume.

And this may be thus expressed:-

¹ The only true exceptions are lucerna, lucarne, and lacerta, lézard: in the Dictionary will be found an account of each of these exceptional torms. The change of e into a before r (as is also seen in per, par) follows a secondary law which is explained in my Mémoire sur le changement de l'e latin en a, in the Mémoires de la Société de Linguistque, i. 418. In nièce from neptia, tiers from tertius, the le has been tormed by the transposition of the i; as also in siècle, which is a bad and semi-learned form, as is shewn by the retention of the e; seule would have been the good form of the word.

<sup>2</sup> Měrula, postěrula, and aspěragus\*, have been treated as if their

e was in Latin position; and have produced merle, poterne, asperge.

# E in French position

if ŏ, becomes ie; as lĕp(o)rem, lièvre. if ē, remains unchanged; as elēr(i)eus, clerc.

§ 67. General résumé of the passage of the Latin e into the French language:—

I. ĕ always becomes ie (except before gutturals, when it always

becomes i).

2. ē becomes i, which sometimes, though very seldom, continues as i; it usually passes on to ei, oi, ai.

3. e in Latin position always remains unchanged (except before gutturals, when it becomes i); e in French position remains as e if long; becomes ie, if short

### HISTORY OF I.

# I.—Ĭ.

§ 68. The Latin i is treated in common Latin, and also in French, as if it was o. We have seen, § 63, that the classical Latin of took in common Latin an iotacised sound, like  $\ell$ i, which became i, and was developed consecutively into  $\ell$ i in Old French before the eleventh century; then into  $\ell$ i, as logem, ligem,  $\ell$ i,  $\ell$ i.

Similarly the Latin i, in Merovingian times, was sounded like éi, and written in Merovingian texts as e<sup>1</sup>, which simply became éi in very early French, then 6i: as fidem, Merovingian Latin fedem, O. Fr. fei, then foi. In several cases the i remains as e, as minare, mener; minutus, menu; divinus, devin; appertinére, appartenir is singular, as violating the rule of the disappearance of the atonic short vowel (§ 52).

This remarkable parallel may be best seen by the following

table:-

Classical Latin ē (lēgem).

Merov. Latin, i, pronounced éi (ligem).

French of the 11th century . . . ei (lei, fei).

After that date . . . . . . oi (loi, foi).

<sup>&</sup>lt;sup>1</sup> The forms vecem, bebere, fedem, menus, &c., for vicem, bibere, fidum, minus, &c., occur in Inscriptions of the times of the Empire: and this pronunciation of i as éi, expressed by e, dates from very early times; for we find in Varro 'Rustici nunc viam . . veham appellant.'

This change of i into oi through O. Fr. ei, is also to be found in pirum, foire; pilum, foil; picein, foil; nigrum, noir; minus, moins; sit, soil; sitim, soil; viam, voie; fidem, foi; bib're, boire; pip'r, foire; Lig'rim, Laire!. For details, and for the history of the passage from Old French ei into oi, see above, § 61.

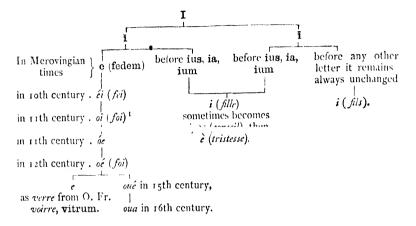

In some cases the atonic i drops to a, as bilancem, balance; pigritia, paresse; hirundo, aronde; eylindrus, calandre. Sometimes is 'consonnified' into j, as pipionem, pipionem; alleviare, allevjare; thence it passes into a soft g in French, as pipionem, pigeon; allevjare, alleger.

## II.—T.

- § 69. I usually remains in French: as nīdum, nid; rīpa, rive; finem, fin; vīnum, vin; prīmum, prin (m frintemfs); sīe, sī; vīta, vie; pīea, pie; and so too in the suffixes īlis, il; as Aprīlis, avril; īcem = is, ix, as perdīcem, perdrix; radīcem, rais (in raifort); thus also the terminations īcum, īcam = i, ie, as amīcum, ami; vesīca, vessic; īnum = in, as molīnum, moulin; īre = ir, as audire, ouar; ītum = i, as marītum, mari; īvum = if, as captīvum, chélif².
- § 70. Before a consonant followed by ius (eus) ia, ium, this i, whether long or short, usually remains: as filius, fil; eilium, cil; sorvitium, service;—lineum, linge; tibiam, tige; simia, singe;—familia, famille; filia, fille; linea, ligne; vinea, vigne. In a few cases, however, this i passes into ci (pronounced like è, as we have seen in § 61): as consilium, consil; mirabilia, merveille; nivea, neige; tinea, legne; insignia, envigne: and this ci, pronounced as è, is met with in the latter form in vieia, vesce; tristitia, lristesse; lactitia, lesse; pigritia, faresse<sup>3</sup>.
- ¹ Sinus has stopped at sein, and vitrum at verre, because these monosyllables instinctively keep all the strength they can. The Dictionary explains how it is that sine has become sans: mino, ligo, plico, formed the regular O. Fr. moine, low, ploie; and these again have been reformed in Modern French into mène, lie, plue. The only true exceptions are eigen, chiche; librum, livre (but the quantity of librum was uncertain); other words, such as tigris, tigre, &c., are of learned origin. The ī of vīcinus, voisin, is treated as it it were short, thanks to the accent, vicinus.
- <sup>2</sup> Patrinum, parram; matrina, marrame, at first changed the i into ei (§ 70), whence O. Fr. parrem, marrame: for the change from ei to ai see §§ 61, 62, 63. Glirem, loir; pīsum, pois, have treated the i as if it were i: perhaps pois, which in regular course ought to have been pis, is so formed in order to escape from the confusion between pis from peetus, and pis from peius. Cervoise is not from cervisia, but from cervisa.

<sup>3</sup> See above, § 2. This change of i into e is also to be met with m vidua, vidva, vedva, veve, veuve. Courroie, from corrigia, has treated the i as if it were i, see § 68.

The history of the passage of the Latin i and i into the French language may be shewn as follows:—

#### III.—I in Position.

- § 71. I in Latin position is changed to e in Merovingian Latin<sup>2</sup>: thus fermum, ceppum, mettere, for firmum, cippum, mittere, are found in Inscriptions; and this e, pronounced ci (see § 66), has produced two distinct French forms, according as it has preferred the open  $\delta$  sound, or the i sound.
- § 72. (i) The è sound.—This is the usual way in which i in position before all consonants, except the gutturals and nasals, is changed: as illa, elle; axilla, aisselle; firmum. ferme; siecum, see; missum, mels; fissa, fesse; arista, aréle³; cippum, cep; crista, créle; crispa, créle⁴.

<sup>1</sup> For details and history of the development of oi, see the table which gives the history of  $\bar{\mathbf{e}}$ , above, § 63.

i in position rarely remains unchanged; instances are ille, il; villa, ville; mille, mil; millia, mille; missum, mis (but also mete); seriptum, écrit. Such words as triste from tristis, argile from argilla, épître from epistola, are learned or half-learned words.

Illos, capillos, ilicem, have formed, quite regularly, the O. Fr. els, chevels, selee, whence, at a later time, by softening l into u (see § 157), came the Modern French eux, cheveux, yeux. Vierge, from virgo, is an exception; but in O. Fr. the correct form, virge, was in use.

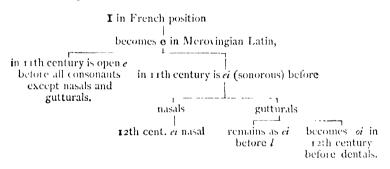

<sup>4</sup> In en, from inde, the word has taken the sound of an, a sound which appears orthographically in such words as langue, dans, sangle, tanche, céans, dimanche, from the Latin lingua, &c.: these words were correctly written as lengue, dens, &c., in Old French.

- § 73. (ii) The ei sound.—This is the form taken by i before nasals, whether they are (1) pure, as imprim(e)re, empreindre; exprim(e)re, epreendre; or (2) fortified by a guttural, as eing(e)re, cendre; exstingu(e)re, élemdre; ting(e)re, temdre; string(e)re, étremdre<sup>1</sup>. For the history of this ei sound, see § 61.
- § 74. Before pure gutturals i first becomes, ei, which then passes into oi, and sometimes even into ai: as rig(i)dum, reide, roide, raide. For the history of ei, oi, and ai, see §§ 61, 62, 63. This i is not in all cases so fully developed; in some words it even remains unchanged: as periculum, péril; elavicula, cheville; lenticula, lentille; eraticula, grille; dictum, dit; delictum, délit.

Before gl, ih, i drops to ci; as apic(u)la, abcille; somnic(u)lus, sommerl; siela, scille; vig(i)lo, veille; trichila, traille; ovic(u)la, O. Fr. oucille, now outsile. (For ei=ai, see § 61.) Axic(u)lum and spic(u)lum made the O. Fr. aissierl, espicil, which, by the later softening of l to u (§ 157), have produced assieu, épicu.

It is only before c, g, followed by a dental, that the i is completely developed: thus strictus, digitus, rigidus, frigidum, explicitum, become O. Fr. estreit, deit, revile, freit, expleit, now étroit, dorgt, roule, froid, exploit<sup>2</sup>. This of (following the rule given in § 63) becomes ai in roude, raide; but e in implicita, empleite, emploite, now emplette.

To sum un:-

- Why is constringero, contraindre, written with ai? Vincero makes vainere, through O. Fr. veinere. Benignus, malignus, keep the i, as bénin, malm: seing and daigne come, through O. Fr. sein, daingne, deingne, from signum, digno. Signum remains as sin in toe-sin.
- <sup>2</sup> The attraction between the *i* and the gutturals is so strong that it makes itself felt, even though a consonant be between it and the gutturals: thus discus, meniscus, theodiscus, become diesus, meniesus, theodiscus, whence O. Fr. deis, menes, tiess, then dois (now dais), menos, tiois.

## HISTORY OF O.

## I.--ŏ.

§ 75.  $\bullet$  continues unchanged in French in a very few cases; that is, before the nasals: as sono, *sonne*; bonus, *bon*; sonum, *son*; homo, *on*: this o, which was sonorous (like the Italian o) in the earliest French, becomes nasal (on) from the twelfth century o.

§ 76. Before all other consonants o becomes a diphthong in French, in consequence of the necessity of strengthening the accented short vowels. In all the Romance tongues, except Portuguese, the Latin  $\check{o}$  becomes a diphthong by placing before it u, the vowel which comes next after it in the scale of vowels: just as e called in i to form ie, so  $\delta$  attracted u, and formed the group  $u\phi$ , some traces of which are even to be found in popular Latin2; this is to be seen in the Italian uo (novum, It. nuovo). This uo was softened into ue in Spanish (novum, nuevo), and, still more, into eu in French (novum, neuf). But the remark made above, that the Romance tongues offer us in space the same phenomena as are presented by the French language in time, is here again shown to be just; for the Latin & was uo in ninth-century French—the Hymn of St. Eulaha has buona; in the eleventh century this uo had softened into ue: thus novum, proba\*, are nucf, prueve in the Chanson de Roland. In the twelfth century the u dropped to o, the group uc became oc, whence nocf, procee; this group, oc, in the thirteenth century takes the sound of the German  $\phi$  (as the rhymes of that age clearly shew), Now, this German  $\sigma$  being expressed in French by eu, the  $\sigma e$  group was transcribed into eu towards the end of the fourteenth century. It may be noticed that, here as elsewhere, orthography has taken two centuries to accommodate itself to pronunciation. Hence comes the modern orthography of novum, neuf; novem, neuf; proba, preuve; movita\*, meute; volo, veux; mola, meule; Mosa, Meuse; coquus, queux; dolium\*, deud; folia, feuille; solea\*, seud; jocum, jeu: also locum, O. Fr. leu, now written lieu, just as Deu has become Dieu.

Here also there are many orthographical irregularities: although the pronunciation is eu, we find even now (1) the orthographical twelfth-century form ue in accueillir, organic, cueillir<sup>3</sup>: (2) the orthographic form eu, which is still more uncouth, in bovem, beuf;

<sup>&</sup>lt;sup>1</sup> Let us add the two words, schola, école; rota, O. Fr. roe, now roue.
<sup>2</sup> Schuchardt, ii. 329, cites buona for bona in a MS. of the seventh

<sup>&</sup>lt;sup>3</sup> While the O. Fr. mucte, from movita, was changed in regular course to meute in Modern French, the old form remained in the hunting-term mucte, a house in which hunting relays are kept: hence comes the name La Mucte, a château in the Bois de Boulogne, mentioned in the correspondence of the eighteenth century.

soror, saur; cor, caur, which were buef, suer, cuer in the twelfth century. This strange orthography was invented by the copyists, who were embarrassed by ue, oe, and eu; they got rid of the difficulty by a compromise between oe and eu; that is, by sticking these two diphthongal forms together (oe + cu = avu). This avu is even reduced to ave in avi. We must not be deceived by these irregularities of the written language; the true language, the spoken tongue, is, on the contrary, perfectly regular in all its developments.

In a few cases & becomes ou, as rota, roue; dolere, douloir; dotare, douer.

§ 77. After reaching cu, the Latin  $\delta$  usually remains stationary: it does, however, sometimes undergo a change, descending still farther to u: thus forum was first O. Fr. fuer, then feur, now fur: and the O. Fr. meure, beu, meu, meutin, bluet, feurée, have dropped to mûre, bu, mû, mutin, bluet, purée. Similarly gageure is pronounced gajure.

To sum up :--

#### Latin ŏ

before all consonants before the nasals except the nasals becomes in 6th century Merovingian uo in oth century French. . 110 in 11th century French in the 11th cent. o (sonorous) . ue in 12th century French in the 12th cent. o in on (nasal). in 13th century French . eu (ö) written alıke as ue, eu, œu, œ, remains as eu drops to u in 16th cent.

## II.-Ō.

§ 78.  $\overline{O}$  in popular Latin early took a sound intermediate between o pure and ou—a sound which transcribers expressed by u: thus we find honur, amur, neputem, nus, vus, &c., in the Inscriptions of the fifth century, and in later Merovingian diplomas.

This new sound passed into the French language, which, in the eighth century, in the Glosses of Cassel, has tutti, purcelli, tundi; in the ninth century, in the Oaths of A.D. 842, we find amur, dunal, returnar, nun; while side by side with these are om, contra, non, which

shews clearly how undecided was the scribe as to the best way of expressing this new sound; for he rendered it sometimes by u, sometimes by o. From the ninth to the eleventh century it is usually noted by u by French scribes: thus we commonly find, till the twelfth century, duncr, amur, ublier, sun, tule, hume, lur (leur), in all French texts  $^{1}$ : after the twelfth century the French scribes seem to prefer o to express this sound  $^{2}$ , and write amor, honor, lor, oblier, tote, &c. Finally, in the thirteenth century this misleading orthography (which did not express the true sound, and made a confusion between o and u) is abandoned, and in its place the two special notations eu and ou are introduced to express the two sounds into which the Latin o is divided.

- § 79.  $\bar{\mathbf{O}}$  passes regularly into eu (save in the cases stated below): as nepōtem, neveu; hōram, heure; flōrem, fleur; eōtem, queux; mōbilis, meuble; illōrum, leur; sōlum, seul; mōres, mours; nōdum, noud; vōtum, vou; ōvum, ouf; seniorem, seigneur; all suffixes in osum become eux: as virtutosum  $^*$ , vertueux; peduculosum  $^*$ , poulleux; ventosum, verteux: suffixes in orem become eur: as dolorem, douleur; honorem, honneur; imperatorem, empereur. Before we end, let us say that this eu coming from  $\bar{\mathbf{o}}$  (and expressed in the twelfth century by o, in the tenth and in Merovingian Latin by u), cannot be confounded with the eu which comes from  $\bar{\mathbf{o}}$  (expressed in the twelfth century by oe, in the eleventh by ue, in the ninth by uo, see § 77).
- § 80. Sometimes cu drops to u: thus morum becomes O. Fi. meure, but from the sixteenth century mure.
- § 81. There are a few cases (chiefly before dentals between two vowels) in which ō prefers to become ou: as nōdo, now: vōto, voue; dōto, doue: and to these let us add spōsus\*, ifoux; nōs, nous; vōs, vous; totum, loul; ferōcem, farouche; amōrem, amour; zelōsum faloux (which is an exception to the general rule for words ending in osum)
- § 82. Before the nasals,  $\bar{o}$ , after becoming u in the eleventh century, settles down as o in the twelfth century; first as sonorous o (§ 75).

<sup>&</sup>lt;sup>1</sup> The editors of medieval works are wrong in concluding hence that in these words u was pronounced as Modern French u: it is easy to see, by means of rhymes of the period, that the pure u sound (like mur, from Latin u in murum) never rhymes with such a word as amur (from Latin o mamorem).

<sup>&</sup>lt;sup>2</sup> On the other hand Anglo-Norman scribes retain the orthography in n, a fact which for a long time kept alive the behet that this n was the distinctive sign of the Norman dialect; it is so, in fact, only from the thirteenth century.

<sup>&</sup>lt;sup>3</sup> In the words maurs, nand, wan, ands, the an for eu is an unlucky imitation of the an group, already treated in § 76.

<sup>&</sup>lt;sup>4</sup> Amörem, amour, forms a single and singular exception. Labour is simply the verbal substantive of labourer, and is therefore no exception.

then as nasal on (§ 75) thus leonem, donum, nomen, after having been leun, dun, num in the eleventh century, are fixed as lion, don, nom in Modern French.

§ 83. Before the gutturals  $\bar{o}$  is 'iotacised'; and, just as a becomes ai, and e ci, so o becomes  $\delta i$ , which in the eleventh century is sonorous, like the Italian  $v\delta i$ , but is weakened in the twelfth century into the modern oi; as vocem, voix. For the history of French oi see § 63.

§ 84. Before proparoxytons in eus, ea, eum, ius, ia, ium, the o (which also includes o treated, from its position, as if it were o) attracts to it the i, and then one of two results follow: either (1) the ō remains, while it softens the subsequent consonant; either continuing as o, as in eiconia, cigogne<sup>1</sup>, or following the regular changes into cu, as folia, feuille; solium, seuil; or into ou, as de-ex-spoliare, dépouiller (as is expounded in §§ 78, 79): or (2) the ō is 'iotacised,' and becomes ui, as corium, cuir; podium, fui; modium, muid; hodie, hui; oleum, huile; and this sound afterwards drops to oi in eboreum \*, ivoire; monius \*, moine; testimonium, témoin; dormitōrium, dortoir; glōria, gloire; historia, histoire<sup>2</sup>.

To sum up:-

o | In Merovingian Latin u | in 9th century either u or o, indifferently,

(as morum, mûre)

<sup>1</sup> Cigogne, however, is a learned word; and the true popular form of it is O. Fr. soigne, which remains in the derivative soignole, from **ciconiola** (the lever of a well, in Isidore of Seville).

<sup>&</sup>lt;sup>2</sup> This oi, coming from Latin o + i, must not be confounded with oi which comes from e or i: (1) because oi from o + i was never ci, whilst the other oi was ei at the beginning of the French language. (2) oi from e or i is a natural outcome of the Latin sound, while oi from o + i comes from the addition of a Latin i to the Latin o.

## III.—O in Position.

§ 85. O in Latin position, except in the two cases considered below (§§ 86, 87), always continues in French: as ossum, os; portum, port; longum, long; soceum, soc; porta, porte; corpus, corps; cornu, cor; cornua, corne; montem, mont. The same is the case when Latin o is in French position (§ 66): as coph(1)num, coffre; pon(é)re, pondre; com(ĭ)tem, comte; rot(ŭ)lum, rôle; comp(ŭ)tum, comple; hosp(ĭ)tem, hôle¹.

§ 86. In certain words this o drops to ou (see § 88): as cortem \*, (). Fr. cort, cour; torno\*, (). Fr. torne, tourne; torta, (). Fr. torte, tourle; coventus (from conventus), (). Fr. covent, couvent; costare (from constare), (). Fr. couster, coulter; consuere, cosuere, (). Fr. couster, coulte, coudre,

Note, that this is not the same kind of softening that has changed o into ou in the following: mollis, O. Fr. mol, mon; collis, O. Fr. col, cou; follis\*, O. Fr. fol, fon; pollicem, O. Fr. police, pouce; resolvere, O. Fr. resoldre, résoudre; molere, O. Fr. moldre, moudre; vol(u)ta, O. Fr. volle, voûle; colaphum, O. Fr. colp, coup; rotulo, O. Fr. rolle, roule; corotulo, O. Fr. crolle, croule; polypum, O. Fr. polpe, poulpe: for these come from the resolution of ol into on; for the history of which see § 157.

§ 87. Before gutturals, and in proparoxyton words ending in ius, ia, ea, &c., o is 'iotacised,' like all other vowels in the same position (see §§ 70, 84), and becomes oi in the eleventh century (§ 84); this at a later time becomes oi (§ 84), then ni towards the end of the middle ages: thus noetom, O. Fr. noit, nuit; eoesa (eoxa), O. Fr. coisse, cuisse; oeto, O. Fr. oit, huit; eoq(ue)re, O. Fr. coire, cuire; noe(e)re, O. Fr. noire, nuire; ostrea, O. Fr. oistre, huite. Even in common Latin we find ustium for ostium, ustiarius for ostiarius. For the history of French oi, see § 63.

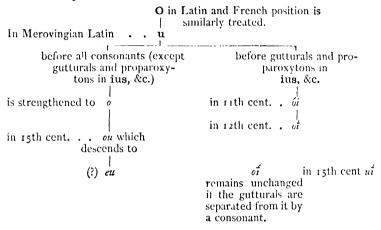

<sup>&</sup>lt;sup>1</sup> Why should dom(i)na (written domna in Merovingian texts) have taken the strange form dame, while dom.i)num became dom in regular course?

<sup>&</sup>lt;sup>2</sup> As late as Villon we find oistre (whence Engl. oyster) rhyme with clostre.

<sup>&</sup>lt;sup>3</sup> This influence has been so strong that possum produced the O. Fr. pois, now puis, although there is no guttural in the word: the probability is that the word was treated as if it was poesum. A remarkable irregularity is to be seen in oc(u)lum. oclum in the fourth century (Appendix and Probum). Oclum produced the O. Fr. ucil, then ocil whence comes the transformation into wail, wil, as we have seen above, in § 76. Why then have we aveuale from aboculum, and not avwil? From the form eail, plural eails, comes the diphthongal form in ieuls, whence, by dropping the l, comes the plural yeux.

§ 88. This mutual attraction between o and the gutturals is so strong, that it even affects them when they are separated by another consonant. In this case the o attracts the guttural, transposes it, and produces the oi sound: thus cognosco, boseum\*, becoming cognocso, boseum\*, produced connois, now connais\*, and bois. Similarly, when the letters are divided from one another by a nasal: longe, mon-(a)ehus, canon(i)cus, become logne, moc'nus, canoc'nus, whence loin, moin, chanoin. It should further be noticed that in the two cases treated in this paragraph o stops at oi, and does not descend to ui.

To sum up:—

# General résumé of the history of the Latin o:-

- ŏ remains unchanged before nasals; becomes a diphthong cu
  before all other consonants.
- 2. ō remains unchanged before nasals; becomes of before gutturals; eu or ou before other consonants.
- 3. o in position (Latin or French) becomes *ui* before gutturals; remains unchanged before other consonants.

Thus we see that as the tendency of a is towards c, of e towards i, so is that of o towards u.

## HISTORY OF U.

§ 89. This vowel was pronounced like French on by the Romans: they used to express the French u sound (=German  $\ddot{u}$ 

<sup>&</sup>lt;sup>1</sup> Similarly, we find in Inscriptions of the fifth century the form crexentem (=crecentem) for crescentem.

<sup>2</sup> For the later change of oi into a, see § 63

and Greek v) by the letter y, which in imperial times took (like

Gr. v) the sound of i pure.

Towards the end of the Empire the classical u sound was often softened into  $\ddot{u}$ , which the copyists could not render by y, seeing that that letter was softened in turn from  $\ddot{u}$  to  $\dot{i}$ . Consequently, we find a great confusion in the written language: u being taken to represent the new  $\ddot{u}$  sound, it was necessary, in order to express the old classical sound of u, to introduce a new orthographic sign, ou. This is apparently a diphthong, but in reality has always expressed a simple sound  $\dot{u}$ .

## I.—Ŭ.

§ 90. Just as  $\tilde{\mathbf{e}}$  and  $\tilde{\mathbf{i}}$  become confounded together in Merovingian Latin, and are both rendered in French by oi, so  $\tilde{\mathbf{o}}$  and  $\tilde{\mathbf{u}}$  undergo the same fortune in French,  $\tilde{\mathbf{o}}$  becoming ou, as is also the case with  $\tilde{\mathbf{u}}$ 

(except before nasals).

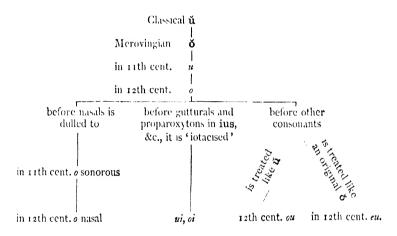

The Latin ŭ sound is represented in Merovingian Latin by o, a letter which certainly must have differed from pure u, since the Appendix ad Probum (Keil, 199. 2) has 'coluber non colober.' Thus we find cobetus for cubitus in the Formulae Andegavenses; jogum for jugum in the MS. of the Theodosian Code. This sound, certainly intermediate between ou and eu, was usually represented by u, then by o, in the hands of the French scribes at the beginning of the language; and it is only at the end of the twelfth century that we see this sound dividing in two very different directions, and passing one way towards ou pure, as cubo, couve; jūgum, joug; ūbi, où; lūpum, loup; and on the other side towards eu², as gūla, gueule; colūbra, couleuvre; jūvenis, jeune; sūpra, O. Fr. seur, now sur. For the softening of eu into u, see § 773.

<sup>2</sup> For this change of Merovingian ŏ into eu, see § 78.

We must take care not to confound ou, as found in sound, which is a simple orthographic transcription of the classical Latin u, with ou in cou (a softened form of O. Fr. cou, originally col, from Lat. collem). In the former case ou is a simple sound, and has always been such; in the latter, ou is the softened form of a strong diphthong, ou in the eleventh century (§ 157), which also is a resultant of the softening of l into u. In the eleventh century these two sounds, now altogether confused together, were completely distinct.

<sup>&</sup>lt;sup>3</sup> The same word has often undergone this double treatment, passing into one form with eu and another with ou: thus lupum becomes in O. Fr. both leu and loup; supra both seur (sur) and sor; juvenis both jeune and jone. Modern French has only adopted one of these two forms. This eu from unit must not be confounded with the eu which really comes from o, and which has been treated of in § 76. The former was always eu in the middle ages, but the latter was originally ue.

- § 91. Before gutturals this parallelism of o and  $\tilde{\mathbf{v}}$  is again met with. Just as o becomes of (vocem, voix), so  $\tilde{\mathbf{u}}$  also becomes of (núcem, noix; ericem, croix). A strange exception is ducem, duc.
- § 92. There is a parallel phenomenon in proparoxytons in ius. eus, ia, ea, &c.:  $\bar{0}$  then becomes ui (as podium, fuy?), and  $\bar{u}$  also becomes ui in cupreum\*, cuivre.
- § 93. So again before nasals:  $\tilde{\mathbf{o}}$  and  $\tilde{\mathbf{u}}$  become  $\theta$ , which is somorous when followed by a single nasal and a vowel, but nasal in all other cases:  $\tilde{\mathbf{sumus}}$ , sommes;  $\tilde{\mathbf{tum}}$ , ton;  $\tilde{\mathbf{sum}}$ , son.

## II.-Ū.

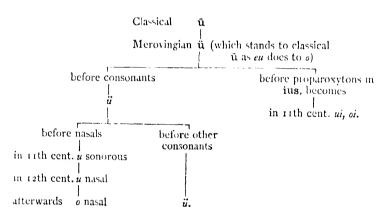

§ 94. The classical Latin  $\bar{\mathbf{u}}$  was at an early date transformed into a softened ii, and the scribes have kept the orthographic sign which formerly designated ou to express this new sound. This change of classical  $\bar{\mathbf{u}}$  into ii is general: crudum, cru; cupa, cuve; culum, cul; durum, dur; scutum,  $\acute{e}cu$ ; gluten, glu; jus, jus; luna, lune; maturum, mur; murum, mur; mula, mule; muta,  $mue^1$ ; nudum, mu; nubem, nue; purum, pur; pluma, plume; sudo, sue; securum, sur; susum \*, sus; usus, us; and in the suffixes (1): ura = ure, as armatura, armure; secatura, sciure; (2) utem = u, as virtutem, vertu; salutem,  $salut^2$ ; (3) utum = u, as acutum, aigu; minutum, menu; canutum, chenu.

<sup>&</sup>lt;sup>1</sup> In the one word rage mue. The masculine mu from mutum remains in the diminutive muet.

This is a form reconstructed by the learned: the O. Fr. regular form was salu.

- § 95. Before the nasals u becomes nasal: as jejunum, jeine; unum, un; Melodunum, Melun; Augustodunum, Autun; Eburodunum, Embrun: and this sometimes passed into a nasal o, as Sedunum, Sion; Lugdunum, Laon, Lyon.
- § 96. In proparoxyton words ending in -ius, -eus, &c., ū or ū, through the reflex action of the i (or e) of the suffix, are transformed into ui, oi: as fugio, fuis; junius, juin; pluvia, fluie; puteus, fuils; euphia, coiffe; Curia, Coire; euneus, com: and this iotacism is extended even to u when in position: angustia, angoisse; bustia\*, botte. Diluvium has undergone peculiar treatment: instead of falling under the influence of the i, and becoming oi, it has turned the i into a consonant, whence comes diluvjum; and then the u, being before two consonants, does not follow the rule given below (§ 97) for vowels in position, but becomes ii (deluge). Fleure from fluvius, and bute from buteo, are harder to explain: so also is heur in bonheur, malheur; O. Fr. eir, oriir; Provençal agur, from Lataugūrium: here the i has no perceptible influence.

To resume the history of  $\bar{\mathbf{u}}$ :—

# IV.-U in Position.

§ 97. It is an ascertained fact that vowels are protected, and saved from change, by being 'in position' (i.e. followed by two or more consonants): thus a in position remains as a: arbor, arbre; e is still e, as ferrum, fer. Similarly, u ought to keep the pure ou sound, and not to drop to ü; and this is exactly what happens. U in position retains its classical purity, under the new orthographic sign of ou, as gutta, goutte.

Ū having, even in Merovingian times, become ü (see above, § 94),

as in purum, pur, the scribes of that time, wishing to shew that u in position kept its ou sound, were obliged to have recourse to a new symbol, and took for this purpose the letter o. Thus the Inscriptions of the Empire and Merovingian diplomas are full of such forms as fornum, mosea, doleem, comolo, sordum, oltra, orsum, in all of which o stands for u.

This Merovingian o was transcribed by the French scribes sometimes into u, sometimes into o; for they were as undecided about the best sign for this new sound as the Merovingian scribes had been: from the thirteenth century however it settled down definitely into the ou sign. Thus turrim is turre in Merovingian Latin, for in Old French, and now tour.

The same continuance of the Latin u in French, under the form of ou, is to be seen in ampulla, ampoule; bulla, boule; betulla, boute; bueca, bouche; eub'tus, coude; eultrum, coutre; eursus, cours; eurvum, courbe; euppa, coupe; eurtum, court; eule'ta-puneta, courte-pointe; duleem, doux; dubito, doute; fulgurem, foudre; furnum, four; gutta, goutle; gluttus\*, glout\*1; diurnum, jour; luseum, louche; luridum, lourd; musea, mouche; ultra, eutre; ursum, ours; utrem, outre; pulv'rem, poudre; pulsum, pouls; pulla, poule; russum, roux; sol'dum, sou; subtus, sous; satullum, soil; suffero, souffre; sulphur, soufre; surdus, sourd; turba, tourbe; turbo\*, trouve; turrem, tour; turnum\*, tour; tussem, loux.

On the other hand, the Old French o remains in fluctus, flot; muttum, mol; nuptiae, noces; viburnum, viorne; ulmum, orme; ructus, rol; gurges, gorge.

Hence it can be seen how very generally this rule is applied: there are but few exceptions to it, and such are (2) in Latin position: as nullum, nul; rusticum, rustre; fustem, fút; justum, juste; purgo, purge; deusque, jusque; (2) in French position (§ 66): as hum'lis, humble; jud'cem, juge; pul'cem, puce; consuetud'nem, contume; amaritud'nem, ameriume. The cause of these exceptions is not easily to be discovered; nor is that of the two words burrus, O. Fr. huire, now bure, and butyrum, O. Fr. burre, now beurre.

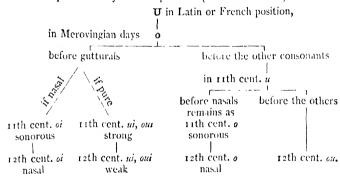

§ 98. Before a nasal the Merovingian o for u remains as o in French: as columba, Low Latin colomba, colombe. This o was sonorous at first, in the eleventh century, then nasal (§ 77) from the twelfth century. Similarly rotundus, rond; undeem, onze; unda, onde; mundum, monde; numerus, nombre; pumicem, ponce; rumpere, rompre; cumulum, comble; fundum, fond; fundus, fonds; de-unde\*, dont; summa, somme; grundis\*, gronde; verecundiam, vergogne; Burgundia, Bourgogne.

§ 99. Before gutturals u in position is iotacised, and becomes ui:

thus fructus, fruit; buxus (= bucsus), buis; tructa, fruite; lucere, lure; conducere, conducer; lucta\*, O. Fr. luck (now lutte): this rule, however, does not hold good for u before el, in which case it became oi in very early French, and afterwards oui; as foenuculum, Low Latin fenuclum, O. Fr. fenoil, now fenoul; so too inductilis (later form induclis\*), andouille; ranuela (for ranuncula), grenouille; colucula, quenouille; as well as the Old Fr. pouil, verrouil, genoul (now fou, verrou, genou, see § 157), from peduclum, veruclum, genuclum. Acucula has certainly produced aiguille; but the Old Fr. word was regularly formed, agoille and agouille.

§ 100. When u is followed by a gutturalised nasal (i.e. by ne, ng, gn) it is iotacised, and becomes oi; at first sonorous (§ 43) and strong, and now nasal (§ 44): as punctum, point; pugnum, poing; jungere, joindre; ungere, oindre; pungere, poindre. But unquam, onques; ungula, ongle; truncus, tronc; juneus, jone, have kept the o without becoming iotacised.

To sum up the history of u in position (Latin or French):—

Finally, as a general résumé of the history of the passage of the Latin u into French:—

- Just as i has a tendency to ascend to e,  $\mathbf{u}(e\mathbf{u})$  has a like tendency towards e.
- u remains either as ou pure, or softened to eu (except before gutturals, when it becomes ui or oi, and before the nasals, when it remains as o).
- 2.  $\vec{\mathbf{u}}$  is softened into  $\vec{u}$  (except when iotacised into  $\vec{u}$  by the gutturals).
- 3. u in Latin or French position remains as ou (except when iotacised into ui, oui, oi by the gutturals, or into o by the nasals).

<sup>&</sup>lt;sup>1</sup> The **x** has had no influence on O. Fr. *jouste* from **juxta**, whence the derivatives *jouster*, *ajouster* (now *joûter*, *ajouter*). So the guttural has gone, without leaving a trace, from fluetus, *flot*; ruetus \*, rot.

## Y.

§ 101. This letter, an importation from Greece, and intended to represent Upsilon in the numerous words borrowed by the learned Latin from the Greek, stands for the exact sound of the modern u. The Greeks expressed the Latin u sound by our

Now this  $\vec{u}$  sound has been dealt with in three different ways by the French: either (1) it has retained the  $\vec{u}$  sound, as  $\zeta(\zeta\psi\rho\nu\nu)$ , zizyphum, jujube; or (2) has risen to the full ou sound: thus  $\beta\psi\rho\eta$ ,  $\pi\nu\xi(\delta a)$ ,  $\kappa\rho\psi\pi\eta$ ,  $\tau\nu\mu\beta\sigma$ s, which were byrsa, pyxida, erypta, tumba\*, in Latin; then bursa, buxida, erupta, tumba, in Merovingian Latin, and were treated as if formed with an original Latin u, so making quite regularly the forms bourse (§ 97), bothe (§ 100), grothe (§ 97), tombe (§ 97): or (3)  $\vec{u}$  has followed the descending course, which is towards  $\vec{i}$  (just as the German Muller becomes English miller, and as the Latin maximus passed first to maximus, then to maximus), as tympanum, timbre; myrtus, O. Fr. mirte (the modern myrte is a classical reproduction). Similarly myxa became miesa, and was treated in French as if written with an original  $\vec{i}$ ; whence come the two regular changes of miesa into misea (§ 170), then misea to mesche (§ 126), lastly méche.

## CHAPTER III.

## THE LATIN DIPHTHONGS.

§ 102. Just as the tendency of the classical Latin was to soften the primitive diphthongs of the Indo-European language <sup>1</sup>, so it is the tendency of the popular Latin to reduce the diphthongs to simple vowels, which are then treated as such by the French tongue <sup>2</sup>.

#### I.-- AE.

§ 103. Ae appears about the time of the Gracchi as a degenerate form of the Old Latin ai (aidem, datai, then aedem, datae). Then in turn this diphthong, already half-gone, is reduced to the simple e sound, which must have taken place somewhat early, for Varro speaks of edus. Mesius, as a popular pronunciation for haedus, Maesius, and Lucilius ridicules the pronunciation Cecilius, pretor, instead of Caecilius, praetor. Still, except on the Graffiti, or wall-

2 Common Latin reduced ae and oe to e, au to o, and retained only

eu.

<sup>&</sup>lt;sup>1</sup> Of the six old Latin diphthongs, ai, ei, oi, au, eu, ou, classical Latin has reduced ei to  $\bar{\imath}$ , and ou to  $\bar{\imath}$ ; has changed ai to ao, and oi into oe; only au and eu have remained untouched.

inscriptions of Pompeii, e for ae is rather rare in Inscriptions down to the third century; after that time it becomes common in monuments and MSS.: as preda, prefectus, presens, Grecus, for praeda, &c.

§ 104. This ae has been treated, when in position, as a primitive e (see § 65), whence comes regularly praesto, prêt. When not in position, the e which comes from ae is treated by the French language (1) sometimes as an e, whence in due form (§ 61) comes a, then of (§ 63); as balaena, balena, baleine; praeda, preda, proie; blaesus, blesus, blois: or (2) as a e, whence, in due form (§ 56), comes the diphthong w: as laeta, leta, he; quaerit, querit, quert; saeculum, see'lum, siècle; caelum (which is cel in S. Enlaha), ciel. But how has as become eu, ieu, in hébreu (Old Fr. ébrieu), from Hebraeus; Matthieu from Matthaeus, and Old Fr eieu for caecus; grau from Graecus; Dicu, Old Fr. Deu, from Deus? This is a phonetic difficulty, which has as yet received no answer, and remains very obscure. The same is the case with the transformation of Judaeus into juif, in which the d has become f (cp. sitim, soif): and here the change from ae to i cannot be explained, unless we suppose that it has taken place in the same way in which iniquus, concido, illido, requiro have come from aequus, caedo, laedo, quaero.

## II -OE.

§ 105. Just as the Old Latin ai became ae in classical times, and then e in popular Latin, so the archaic Latin oi (foidere, Coilius) is softened by the time of Plautus into oe (foedere, Coelius), which becomes e in late imperial times. By the third century A.D. it was difficult to distinguish between oe and e<sup>1</sup>: whence ae and oe, having alike become e, have been similarly treated: thus we have oi, foenum, (§ 63), foin; ci in poena (which was poine in Old French, § 63), peine; also e from foemina, femme.

## III.-AU.

§ 106. Just as at became ae, then  $\epsilon$ , so au becomes ao, then  $\epsilon$ . This change is to be seen more than once in classical times; as in Clodius for Claudius, olla for aula, plostrum for plaustrum, explodo from plaudo, suffoco from fauces: it becomes common in the decadence of the Latin language: thus Festus says that in his days auricula, aurum were pronounced oricula, orum by country people. In Merovingian documents the substitution of o for au is general.

When once ae and oe had both become e, an inextricable confusion sprang up in Latin orthography between them; and thus we find poena, coena, wrongly written paena, caena.

- § 107. Au always begins by becoming o in French: as aurum, or; clausus, clos: ausaro\*, oscr; causa, chose¹. This o usually remains in Modern French², except when followed by a consonant which disappears: in this case o becomes ou in Modern French: as in laudo, O. Fr. loc, loue; compare also aut, ou; inrauco\*, enroue. It is clear that we must not confound this ou from O. Fr. o with the ou which comes from the softening of l into u, as in caulis, O. Fr. chol, chou.
- § 108. Before a guttural (as auca), or in a proparoxyton word ending in ius, ia, ea, &c., au, after passing into o, follows the rule which we have noticed as holding invariably in this case (§§ 83, 84), and is iotacised into oi: as auca, oie<sup>3</sup>; nausea, noise\*; gaudium, poie; Sabaudia, Savoie: a change which even reaches to such words as claustrum, cloitre<sup>4</sup>; adbaubare, aboyer, in which cases there is no guttural.

### CHAPTER IVS

## THE LATIN CONSONANTS.

- § 109. A consonant which stands between two vowels, like the t in maturus, disappears in French; thus we have augustus, aoûl; credentia, créance; dotare, doucr; ligare, lier; vocalis, voyelle.
  - § 110. The consonants may be divided into:
    - I. Explosive: (i) Labials, p, b (soft and dull p, weak and sonorous b).
      - (ii) Dentals, t, d (strong and dull t, sonorous d).
      - (m) Gutturals, c, g.

<sup>1</sup> Learned writers have often reconstructed, and wrongly so, the Old French forms, with a view to bringing them back to what they conceived to be the original Latin form: thus the very correct Old Fr. power from pauper, torel from taurellum, have been rewritten as pauvre, taureau, by the clerks.

<sup>2</sup> In one or two cases Modern French has treated this Old Fr. o as if it had been a primitive Latin o, and has changed it regularly (§ 79) into eu: thus cauda, paucum, gave the Old Fr. coc, po, softened in Modern French into queue, peu. The old form coe, or coue, is still to be seen in the derivative couard.

We have seen (§ 84) how often the Latin as it becomes weaker in French takes two forms: thus paucum, when it lost its guttural influence, became peu, but in Old French, when it retained some memory of it, it was poi; and similarly auea loses all trace of the guttural in the O. Fr. oe, oue, but recovers it again in oie.

<sup>4</sup> In Old French we have also the more regular form clostre.

<sup>5</sup> The Latin Consonants have been rewritten by M. Brachet for this volume.

II. Aspirate: h.

III. Semi-vocals: j, v.

IV. Prolonged: (i) Labial, f (ph).

(ii) Dentals, s, x, z.

V. Liquids: r, 1. VI. Nasals: m, n.

# EXPLOSIVE CONSONANTS. P, B.

# (1) Labials. Strong P.

§ 110. The Latin initial p always remains unchanged: paupertatem, pauri clé; pacare, payer; palatium, falais.

§ 111. Medial p drops to b in popular Latin, and this b in its turn drops to v in French: thus the classical saponem, ripa, crepare, saporem, become sabonem, riba, crebare, saborem in Merovingian days: but (as we see, § 113) b drops necessarily to v in French, and the forms sabonem, riba, crebare, saborem, become savon, rive, crever, saveur.2.

**P** having such a distance to pass (**p** to **b**, **b** to v)<sup>3</sup>, it is easy to see that when medial it is not syncopated in French; still there is one example of this syncope in sii, (O. Fr. seii, from sa(p)útus \*.

In some cases p before another consonant disappears, as accapitum, accaptum, achat; rupta, route. Sometimes it remains as

It is no objection to this rule that we have *boite* from **puxida** because the Romans themselves called it **buxida**; Placidus the grammarian mentions this as a popular and incorrect pronunciation of the word.—(Glosses of Placidus, ap. Mai. Cl. Auct. vi. 570.) Compare also the classical Latin **buxus** from Gr.  $\pi \dot{v} \xi os$ . The change of initial **p** into b cannot therefore be attributed here to the French, but to the popular Latin.

<sup>2</sup> In apiela \*, abeille; apotheea, boutique; eaepulla, ciboule; eapanna, cabane, it seems at first that the Latin p had been arrested in its descent at b, without being able to drop to v: but, in fact, these words are not French (i.e. they have not come straight from the Latin); they have been imported (as may be seen in the Dictionary) some from Provence, others from Italy: and consequently they do not vitiate the rule laid down. The same is the case with the word acabit, which is an offensive corruption of accapitum \*.

d'Such words as vaporem, vapeur; stupidus, stupide; occupare, occuper; capitale, capitale, &c., which retain the medial p intact, are all of learned origin (§ 36). We must, however, except some such forms as capitulum, chapitre; epistola, épître; papilionem, papillon; caponem, chapon; apostolus, apôtre; capitellum\*, chapiteau; capulare, chapeler, which are clearly more than half popular, and have yet partly remained in a learned form, for reasons which one cannot always readily explain.

v, as cupra, cuivre. So also pi becomes pj, and then disappears, as in apium, apium, ache; appropiare, appropiare, appropiare, appropiare.

§ 112. Final p disappears: lupum becomes O. Fr. *lon*, which the learned from the fifteenth century onwards have rewritten in the form *loup*, in which the imitative p still remains mute  $^{1}$ .

When followed by a (in French e mute), the final p is regarded as a medial, and passes regularly into v: as ripa, rive; cupa, curve;

lupa, louve; rapa, rave; sapa, sère; caepa, cive.

### Soft B.

§ 113. The Latin initial b remains unchanged: bucca, bouche; bovem, bauf; bene, bun; bonum, bin.

The Latin medial b when soft never remains in the middle of a word<sup>2</sup>, but drops to the aspirated v; debore, devoir; caballum, cheval; habere, avoir. In some cases the Latin b, having become v, does not stay there, but treats that v as if it were the original letter; it then undergoes the change considered below, § 141, i.e. it disappears: adbaubare\* becomes abover; habentem, avant; debutus, dii; habutus \*3, (). Fr. cii, cu; robiginem, regne; suburra, saerre; subumbrare, sombrer; subundare, sonder; tabanum, laon; tubellum (?), huyau; viburna, viorne; nubem, nuc; bibutus \*4, formerly beii, now bu.

§ 114. Final b disappears: ibi, O. Fr. first in, then i, Modern Fr. y; ubi, ou; debeo, O. Fr. doi, dois; seribo, O. Fr. escri, écris; unless followed by a (as is also the case with p, see § 112), when it becomes v: faba, fève; proba, preuve; entyba, endive.

As to chef from caput, the permutation comes in another way. Caput became capu in common Latin, then the regular permutation (p to b, b to v) gave in Merovingian Latin the form cabo; and this is succeeded by the French form chève in the tenth century (et preparavit dominus ederam super caput Jone.. un edre sore sen cheve, 'an ivy-bush over his head,' is a phrase found in a homly on Jonah of the tenth century). Chève became chef, like bovem, hauf; ovum, auf; vivum, ruf, see § 142.

The words which retain the b are all learned, such as probus, probe; subitus, subit, &c.; and even laborare, labourer; habitus, habit; laborem, labour; habitare, habiter, in spite of their adoption into common use, are of learned origin. The only exceptions among popular forms to the rule of p passing into v, are obedire, obeir; and abismum \*, abime.

In Western patois we still have the form évut for eu, marking the

transition from ha(b)utus \* to avut, then evut, eü, eu.

4 Similarly the imperfects in abam, &c., have formed successively ève, eie, oie, ois, ais: lavabam, O. Fr. lavève, then, by dropping the second v, laveie, lavoie, lavois, lavais.

<sup>5</sup> The exception sebum, suif, is not due to the French: Pliny writes it sevum, so that the change is not from b to f, but from v to f.

# (ii) DENTALS. T. D.

## Soft T.

- § 115. The Latin t had always a dental sound, except when it preceded the combined vowels ia, io, io, iu, in which cases it was sibilant. In this case t was equivalent to s or soft e, as is seen in the Latin itself, in which we have contin and concio. It falls in French to s or ss or e, as in justitia, justesse; nuntius, nonce; titionem, tison; rationem, raison.
- § 116. Initial t always remains: tantum, tant; tabula, table; totum, tout; titionem, tison; tutare, tuer; testa, tite.
- § 117. Medial t undergoes two successive changes: (1) it becomes d in Old French, (2) this d disappears; and then the two vowels which are thus brought together are contracted. Thus mutare, vitellum, imperatorem, aetaticum, became O. Fr. muder, vedal, emforador, edage. In the twelfth century this medial d begins to be regarded as if it had been an original Latin d (see § 120), and as such it disappeared; and the words became muser, vetal, empereur, é age, and these again, towards the close of the middle ages, were contracted into veau, empereur, áge. Thus one sees that the medial Latin t passes through three stages: 1st, at the origin of the French language it passes from the soft to the sonotous state, becoming d; 2nd, this medial d is dropped; 3rd, the vowels thus brought together are usually contracted, though sometimes they are severed by intercalation?

We subjoin the full list of Latin words which contain the medial

t and have passed through these three stages 3: --

Abbatissa, abbadissa, abba-esse, abbesse; netatieum, nedatieum, edage, e age, áge (so also with armure from armatura); brian from botellus; cahier from quaternum; carrean from quadratellum;

1 Such words as faladin, salade, cascade, are of foreign origin.

<sup>&</sup>lt;sup>2</sup> Such a hiatus as may exist between two Latin vowels, not being permissible in French, is put an end to mone of two ways: either (1) by contraction, which combines the two in one; or, (2) by intercalation, which disjoins them, and separates them by an interposed consonant. We have just seen contraction at work; intercalation may be seen in the following example: pottere, O. Fr. podir, then po-oir, by loss of the d; then, to avoid hiatus, a v is introduced, and it becomes po-v-oir, whence Modern Fr. powoir.

Medial t naturally persists in all learned words: natalis, natal; nativus, natif; votare, voter. It is to be found also in some popular words: buticula, boutcule: catulliare, chatouller: capitaneum, chevetain; quatere (?), catir; Britannia, Bretagne; medietatem, moitié; pietatem, fitié: pietantia, pitance; pietosum, pitenv; tota, toute: and it even becomes tt in beta, bette; blitum, blitte; carota, carotte; quietus, guitte.

consier from consitarius; chaîne from eatena; coussin from culcitinus; commuter from commutare; crier from quiritare; délayer from dilatare; dévouer from devotare; doloire from dolatoria; douer, from dotare; due hesse from ducatissa\*; écurer from seutarius; éternuer from sterautare; feu from fatutus\*; grille from craticula; marier from maritare; même from metipsimus; mélayer from medietarius; much from mutettus\*; noël from natalis; oublier from oblitare\*; pecle from patella; pouvoir from potere\*; prairie from prataria; préau from pratellum; poussif from pulsativus\*; puer from putere; rouelle from rotella; seau from sitellus; seaver from succutere; soucer from sollicitare; terroir from territorium; true from tritare\*; tuer from tutari; verlucux from virtutosus\*; vielle from vitella; vouer from votare\*.

§ 118. Final t undergoes like changes with medial t. In case of a word ending in um, t disappears, together with the termination; as pratum, fre'; cornutum, cornu. [For further examples see under the suffixes -atus, § 201; -utus, § 201; Fr. tatem, § 230].]

In a few instances final t becomes f, as in sitim, soif. For d = t = f see § 122.

### Sonorous D.

- § 119. Initial d always remains: dies, di; decanus, deven; donare, donner; dextrarius, destrier. Jour, from djurnum; jusque, from de-usque, diusque, djusque, fall under a different case; namely, that in which d is followed by iu, and the i, becoming consonantal as a j, eventually ejects the d, though it has been retained for centuries in the dj, dz forms (the form zabolus is found in Latin for diabolus); and the dj sound remains in the Italian g
- § 120. Medial d remained in French up to about the middle of the eleventh century, and is found in French MSS. of that age; in the latter half of that century this d is softened into a sound half sibilant, answering to the two English th sounds; and this, in certain French MSS. written in England, has actually been indicated by the sign th: thus videre becomes successively vedeir (in the Chanson de Roland, in the eleventh century); vetheir (in the Vie de S. Brandon, a twelfth-century poem); then vécir in later texts (whence successively vécir and voir). So similarly for accabler, eadabulum; aimant, adamantem; assecir, assedere; bailler, bada-

¹ It must be remembered that the dread of the hiatus has had a tendency to protect the consonant: thus the t remains in fat from fatuus. Compare G. Paris; Soc. de linguistique, s. v. fade.

culare\*; bayer, badare; bénir, benedicere; chance, cadentia\*; choir, cadere; chule, caduta\*; confier, confidare\*; confiance, confidentia; crovance, eredentia; cruel, crudelis; créance, credentia; cruulé, crudelitatem; dénué, denudatus; décheance, decadentia; dimanche, die-dominica; échéance, excadentia\*; enfouir, infodere; envahir, invadere; féal, fidelis; fiancer, fidentiare\*; fier, fidare; fouir, fodere; fouiller, fodiculare\*; glanul, gladiolus; gravir, gradire\*; joyau, gaudiellum; jouir, gaudere; joyeux, gaudiosus; juif, judaeus; louer, laudare; moelle, medulla; méchant, minuscadentem\*; moietié, medietatem; moven, medianus; moven, modiolus; niais, nidacem; nouir, nodare; noueux, nodosus; nelloyer, nitidare; obéur, obedire; ouir, audire; parvis, paradisus; féage, pedatieum\*; pion, pedonem; pou, peduclus\*; préséance, praesidentia; rançon, redemptionem; suer, sudare; suaure, sudarium; séoir, sedere; séance, sedentia; trahur, tradere; trahison, traditionem; trailre, traditor.

This rule has no true exceptions: odorem, odeur; rudis, rude; studium, étude, are not in point, being learned words, whatever may be said. As to viduum, vide, this persistence of the d is, on the contrary, confirmatory of this rule. We have noticed (§ 118, note 1), that the dental t remains in like manner before the hiatus of uu, uo, which protects the preceding consonant: as may be seen in fatuus, fat; quatuordecim, quatorze; batualia, bataille. In a few cases the Latin d has been represented by French t, as appendicium, appentis.

§ 121. Final d is softened into t in very early French, then this t ceases to be pronounced, and disappears from MSS.: thus mercedem becomes successively mercit, then merci. Some words have retained this t, as de-unde, dont; viridis, vert; subinde, souvent. A certain number of words, however, have directly lost the dental without passing through the t stage in any extant MS.: as fidem, foi; erudum, cru; nudum. nu; medium, mi; hodie, hui; podium, pui. Some of these words have been recast by the learned and the clerks at the end of the middle ages, so as to get back to the Latin forms: thus modium, pedem, nodum, nidum, after having become mué, pié, neu, ni, were altered to muid, pied, næud, nid; this d is not pronounced.

§ 122. In a few cases there is a transformation of this final d into f (compare the f from t in sitim, soif; ablatum\*, bleif\*): thus feodum makes fief; modum, mauf; Judaeus, juif; and such names of places as Marbodus, Marbauf; Pambodus, Paimbauf, &c.

# (iii) GUTTURALS. C, G.

C.

- § 123. The Latin c was hard and pronounced like k, whether before e and i, or before a, o, and u: the Romans said kikero, fekerunt, kivitatem. In French this hard sound has perished before e and i, and has been replaced by the sibilant sound (s); before a, o, and u it keeps its hard sound: we shall do well to keep these two cases distinct. Before the groups ia, io, iu, Latin c however did not retain its k sound, but became a tz (juditzium, contzio, offitzia), the history of which we will consider separately.
- § 124. Initial e remains unchanged. (1) before e, as centum, cent; cedere, ccder: (2) before i, as cippus, ccp; circulus, circle: (3) before o, as collum, cou; cornu, cor; cornua, corne; corpus, corps: and sometimes this c becomes a q, as coquus, queux; cotem, queux. In words like coactare\*, cacher; coagulare, cailler, in which the o is absorbed by the subsequent vowel, the rule of continuance of the c is respected, for the Old French was coacher (the form coailler is to be found in the Oxford Psalter); and the o has been dropped at a later time: (4) before u, as cutenna, coucnne; curtem, court; currere, courir; culpa, culpe.

Before au, e remains, or becomes q, when the au is treated as a simple o; whence cauda, coda, queue; while causa, caulis, have changed e into ch (chose, chou).

§ 125. In conflare, gonfler, and crassus, gras, the c has dropped to g. Cp. cupellettum\*, gobelet, though here the French origin of the word is doubtful. Compare the pronunciation of such words as Reine Claude, which is pronounced Glaude, or seconde, almost pronounced segonde.

§ 126. Before a, initial c undergoes a very peculiar change: it passes through the successive aspirated sounds kh, tkh, teh, eh; whence carrus, char. This change, of which there is not a trace in Merovingian Latin, was produced early in French: chief is found for caput in the Cantilène de Sainte Eulalie; still it was long before it got into general use in writing: as late as the end of the eleventh century we find cambre and canter in French MSS., whereas it is certain that at that date the pronunciation was chambre and chanter. This change of c into ch is to be met with in—

Champ, campus, chance, cadentia\*; chaîne, catena; chef, caput; chair, caro; chèvre, capra; chien, canis; chose, causa; champétre, campestris; champion, campionem \*; chicorie, cichoreum; chenal, canalis; chape, cappa; chapeau, capellum +; chapelle, capella \*; cheptel, capitalo; charnel, carnalis; charner, carnarium; chaire, eathedra: chaloir, calere: chalumouu, calamellus: chalour, calorem: chambre, camera; chancel, cancellus; chanceler, cancellare \*; chancir, canutire; chancre, cancer; chandelle, candela; chancer, cambiare ': chanoine, canonicus; chanson, cantionem \*; chantre, cantor; chante, cantare; chantier, canterium; chantre, cannabis; chattler, capulare; chapiteau, capitellum; chapite, capitulum; chapen, caponem'; char, carrus; charger, carricare; charbon, carbonem; chardon, cardonem \*; charrier, carricare; cherlé, carritatem; charme, carmen; charme, carpinus ; charmère, cardinaria\*; charfentier, carpentarius; charpie, carpero \*; charrue, carruea; chartre, career; chasse, capsa; chasser, captiare \*; chaste, castus; chasuble, casibula \*; chat, catus \*; châtaigne, castanea; château, castellum; chignen, catenionem \*; châtier, castigare; chatouiller, catulliare ; châtrer, castrare; chaud, calidus; chaudière, caldaria \*; chauffer, calefacere \*; chaume, calamus; chausse, calceus; chaussée, calceara; chause, calvum; chaux, calcem; chemin, caminus; cheminée, caminata ; chemise, camisia; chenal, canalis; chenal, canile; chenalle, canicula\*; chena, canutus; cher, caras; chère, cara; chercher, circare; chélif, captivus; cheval, caballus; chevaucher, caballicare; chevecier, capicerium \*; chevelre, capistrum; cheveu, capillus; cheville, clavicula; chever, capra; chevreul, capreolus\*; ches, casa; chien, canis; chiche, ciccum; chiche, cicer; choir, cadere.

§ 127. In a certain number of cases the initial ch goes still further, and becomes g or sometimes even j: eapella i, jarelle; earyophyllum, grrofle; eamitem \* (from cames), jante; eaveola, geole; eammarus, O. Fr. jamble (a crayfish), (and perhaps janger from qualificare, eal'feare).

§ 128. This ch for ea did not exist in the Picard dialect 1; whence came the forms camp, campagne, casse, which have entered

<sup>1</sup> See Historical Grammar, p. 21.

the French language side by side with champ, champagne, charve, from campus, campania, capsa. To the same influence may be attributed such irregular forms as cavea, cage, side by side with caveola, geole; câble from capulum (supplanting the O. Fr. chable); côcher from calcare (supplanting the O. Fr. chocher, which survives in the names of certain birds, choche-pierre, choche-poule); hence also cauchemar, and the diminutive caillou (from calculum\*, whence O. Fr. caillel, Bartsch, Pasturelles, 120); and also cava, cave.

By the side of these exceptions, due to the influence of certain dialects of the Langue d'Oil, we must put the words due to the influence of the Provençal; such as capitellum (O. Fr. chadel), cadeau; capsa, caisse (doublet of chásse): or due to the influence of the Italian; such as caput, cap (It. capo); cadentia, cadence (It. cadenza); calcare, calquer (It. calcare); cavalier, canaille, capitaine, calegon, &c.

§ 129. Medial c. Before a, o, u, medial c passes into g in Merovingian Latin, which has pagare, vogare, logare, instead of pacare, vocare, locare, &c. So also the ch of achates, being treated as c, drops to agake. This g drops to the semi-vocal j¹, which later is again reduced to a simple i: thus brace becomes braga, then braja, then braic. Similarly et becomes it, as abstractus, abstrait: cl drops to it, as duetilis, due'lis, deadle: cr becomes ir, as fac're, faire, benedic're, be'nr; deduc're, déduire. In some cases medial e becomes q, as eveque, evesque, from episcopus. Final ce is often reduced to c, as in siccus, sec; beccus, bec; saccus, sac. When the final c is between two vowels it disappears; as amicus, ami. Soft c becomes s, as avicellus, o'veau; placere, plaisur.

G.

§ 130. Initial Latin g, whether hard or soft, usually remains in French: as gustus, goult; gobionem, goujon; gigantem, géant; gemere. geindre; gomma, gemme; gentem, gens (gent). It sometimes

In acutum, aigu; acucla\*, aiguille; the Latin c has been exceptionally stopped in its descent at g; and in secundum, second, it has remained unchanged: we must not put among such cases the words cicadula, eigale; fica, figue; vicarium, viguier; ficarium, figuier; draconem, dragon, which have been borrowed from the Provençal eigala, figu (O. Fr. form was fie and fier, see the Oxford Psalter), viguier, drago (?). Ciconia, eigogne, is a case in point, as the Old French form was soigne. As to locusta, langouste, this nasal form must come from a form loneusta: the simple form has regularly lost its c, and has become laouste (found in the Oxford Psalter). Finally eiguë from cicuta is probably a learned word.

is softened into j, as in gaudere, jouir; gemellus, jumeau; galbinus, jaune.

§ 131. Medial g also remains: as angustia, angoisse; eingulum, sangle; ungula, ongle; largus, large. Also it drops to j: as Andegavi, Anjou. It sometimes disappears, as in ligare, lier; Ligerum, Loire; legere, lire.

But g before 1, m, n, r, and d, disappears in French, in whatever part of the word it occurs, being vocalised into a r: vigilare, vigilare, vigilare, vigilare, strigula, strigla, étrille; pigmentum, piment; tragere \*, traire; legere, lire; malignum, malin; Magdalena, Madeleine; frigidus (frig'dus), froid. Compare γιγνώσκω, gnoseo, noseo; gnatus, natus.

§ 132. Final g remains when it goes with n: as longus, long; stagnum, élang; pugnus, poing; dignus, digne; in other cases it disappears, as legem, loi; regem, roi. Though it remains in longus, long, it is dropped in longe, loin.

# II.—THE ASPIRATE. II.

§ 133. The Latin h was not, like the French h, a mute letter, unpronounced and only written 1: the Romans originally aspirated their h with a certain vigour (like the German h); for Marius Victorinus, the grammarian, as late as the fourth century, directs his countrymen thus: 'Profundo spiritu, anhelis faucibus, exploso ore fundetur.'

The aspirate, being of all letters the hardest to pronounce and requiring the most effort, of necessity undergoes more softening than any other letter, in obedience to the 'law of least action,' § 139. Just as the Latin had abandoned almost all the aspirates of the Indo-European primitive languages (aspirates which were retained in the Greek, and still more in the Sanscrit), the French has completely dropped the Latin aspirated h, and, ceasing to pronounce the letter, naturally also gave up writing it <sup>2</sup>.

§ 134. Initial h. Just as the archaic Latin words holus (a bean); hera (a mistress); her (a hedgehog), dropped to olus, era, er, in

What is called the French aspirated b is not really such; it is not really pronounced, but simply has the power of stopping the elision of the preceding vowel, as le-béros, me-hair: or it stands for a final consonant; thus Pierre est haissable is pronounced Pierre eh-aissable; whilst, on the other hand, the words Pierre est homme and Pierre étonne are pronounced alike.

<sup>&</sup>lt;sup>2</sup> It is unnecessary to repeat that we do not trouble ourselves about learned words such as homicida, bomicide; halitare, baliter; habitare, babter; heros, béros, &c.

classical days, so the common Latin suppressed the aspirated h, and wrote oc, ordeus, eredes, onestus, omo, which are found in Inscriptions of imperial days for hoc, hordeum, heredes, honestus, homo. The French language, carrying on this tendency, has avoir, on, or, orge, oui, encore, for habere, homo, hora, hordeum, hoc-illud, hane-horam. Similarly we have ordure from O. Fr. ord, horridus; and lierre, O. Fr. ierre, hedera I. In short, it invariably suppressed what was to them a useless letter, and said also hominem, omme; hodie, ui; herba, erbe; hereditare, ériter; heres, oir; heri, ier; hibernum, iver; hora, cure. These regular forms were afterwards corrupted by the learned, who restored the mute h; whence the modern forms homme, hui, herbe, &c., which, therefore, do not really break the law laid down in § 133, as might appear at first sight.

§ 135. Medial h. Just as classical Latin suppressed the aspirate sound in ni(h)il, eo(h)ortem, mi(h)i, pre(h)endo, contracting these words into nil, cortem, mi, prendo, so the French, seeking to abolish this medial aspirate, employed the two usual methods given above (§ 117, note 2)—contraction or intercalation: Jo(h)annes is contracted into Je-an, then Jean, pronounced Jan; but in traire from tra(h)ere we have the other process; the aspirate becomes a guttural, and tra(h)ere becomes tra-g-ere. (For tragere\*, see traire in the Dictionary\*.) Tragére, regularly contracted into trag're, becomes traire, by changing gr to ir (§ 131). The same case is found in medieval Latin: vehere becomes vegere, to soften the hiatus; and similarly we find grugem for gruem.

The suppression of the aspirated h explains to us why th, ph, ch, which were learned importations of Latin savants for the Greek  $\theta$ ,  $\phi$ ,  $\chi$ , have been treated in French as if they were l, f, c.

# III.—THE SEMI-VOCALS. J, V.

§ 136. Two consonants (j, v) bear this name: for they had in Latin a sound which floated between that of a vowel and that of a consonant; the Latin j approaching to i, the Latin v to ou. From this double tendency of these two Latin letters we get in French two very distinct ways of treating these semi-vocals, according as they incline towards the French consonantal or the French vowel state. In the first case, the Latin v and j take in French the form of two

<sup>1</sup> Ortolan comes from hortulanus \*, through the Provençal.

<sup>&</sup>lt;sup>2</sup> The form tragere explains how trahentem has produced trayant, where the y represents the usual vocalisation (§ 131) of the g of tragentem.

well-marked consonants  $v^1$  and j (which is in sound a soft g, and is sometimes represented by that letter): thus avena became avoine, and jocale, joyau; junicem<sup>3</sup>, génisse. In the second case, the Latin j and v, becoming real vowels, are represented by i and ou: hence Troja becomes Troje (an i which finally disappears in such words as j-junum, je-iin, then j-cin, a word which is an example of both processes): and the v = ou at last disappears and leaves no trace; as pa-vonem, (pa-wonem), pa-ou-on, pa-ou. This, however, does not hold good of initial v, which being strengthened by its position remains in French.

We must now inquire how these changes have taken place.

J.

§ 137. This letter, pronounced i-i by the Latins, who said i-iuvenis, mai-ior, for juvenis, major<sup>4</sup>, soon underwent two distinct changes: (1) the first transforming this Latin i-i, in order to mark it better, into d-i, as in ma-di-us, found in medieval Latin<sup>5</sup>, for ma-i-us; or di-acere for jacere; and (2) when once the j has got a d to support uself, how does it become a consonant? It takes a dj sound, diacere = djacere, a sound represented in modern Italian by gi (pronounced dgi), as in giacere. This compound dgi sound loses its dental, and is then reduced to the soft g or j sound (as pronounced by the French). This, then, is the scale of sounds:

 $J (= i \cdot i) \rightarrow di \cdot i - dj \cdot i - gi - j$  (French): i-iugum $\rightarrow$  di-iugum-giugum, joug.

Bearing in mind these preliminary distinctions, we may now study the passage of the Latin semi-vocal **j** into French.

§ 138. Initial j becomes a consonant, and is sounded as ge; jam  $j\hat{a}$ ; jaculare\*, jaillir; Januarius, janver; jactare, jeter; jocus jeu Jovis-dies, jeudi; jejunus, jeun; jungere, jeindre; juncus, jeue joculari, jengler; jocari, jouer; jugum, jeug; juxtare, jeuter juventia, jeuvence; jocale, jeyou; Judaeus, jun; judicare, juger juvenem, jeue; Junius, jun; jumentum, jument; jurare, jurer;

<sup>&</sup>lt;sup>1</sup> The French v is a labial consonant, degenerated from the Latin  $\mathbf{b}$ , much as the French j, or soft g, is a degenerated form of the guttural cb (?)

<sup>Pronounced a-ou-ena at Rome.
Pronounced i-iunieem at Rome.</sup> 

<sup>&</sup>lt;sup>4</sup> Cicero, Quinctilian tells us, was accustomed to write this medial j as i. <sup>4</sup> Sciat enim Ciceroni placuisse aiio, Maiiamque, gemmata i scribere. <sup>2</sup> Instit. Orat. i. 4, 11. We find Iiulius for Julius in Inscriptions under the Empire. Those Inscriptions and MSS, which write Hiesu, Hiaspidis, Hiericho, Hieremie, Trahiani, for Jesu, Jaspidis, Jericho, Jeremias, Trajani, have accurately expressed this pronunciation.
<sup>6</sup> For this case, see under *Mai* in the Dictionary.

jus, jus; justus, juste; a change also often expressed by soft g, which is the same letter as j in French: whence jacere, gésir; junicem, génisse; juniperum, genièvre.

§ 139. Medial j retains the Latin i sound, and disappears when it immediately precedes the tonic vowel: jejunium, je-iin, jeun; when, on the other hand, it follows the tonic vowel, it remains as i: Troja, Troie; raja, raie; boja, O. Fr. boie, bouée; majus, mai; major, maire; bajulare, bailler; pejor, pire; pejus, pis¹.

#### V.

§ 140. Initial  $\mathbf{v}$  always continues, except in the important case of  $\mathbf{v} = gu$ , as in Vasconia, Guascogne, Gascogne; viscum, gui; vadum, gui; vespa, guipe; vipera, guive. In other words it remains, as vanum, vain; vinum, vin; vectura, voiture; vulturius, vaitour; virtutem, vertu; vacea,  $va\cdot he$ . In a few words  $\mathbf{v}$  is strengthened into either f, as vicem, fois; or into b, as vervecem, brebis; vacealarius, bachelur; vervecarius, berger; vettonica, béloine; Vesontionem, Besançen; but this rise from  $\mathbf{v}$  to b is not the work of the French language; it was done in the Latin. Petronius writes berbeeem, Pliny bettonica; in the fifth century we find berbecarius; in a tenth century MS, we have baccalarius.

§ 141. Medial v. We know that the Latin v was not pronounced like the French v, but rather like the English v (or like the French ou sound). This sound, which was not a pure consonant like the French v, nor a pure vowel like the French u, but lay between the two, has properly been called semirocal. It has undergone two different methods of treatment in French, according to its approxi-

¹ The word aider, very irregularly formed from adjutare, may here be considered. Adjutare at a very early period became ajutare, as the Inscriptions shew us (see Dictionary, s. v. aider, where also the details of these changes are worked out). Ajutare soon became aj'tare, whence aider. Abreger from abbreviare, abbrevjare, abrejare\*, is an example of a French g standing for a Latin j.

This rise from v to b, rare in the Latin also, especially before the fourth century, became the rule in certain pators of the Romance languages; as the Neapolitan in the East, the Gascon in the West. In Gascony the pronunciation has always been bos from vos; boulé from volere\*, benir from venire, &c.; a rule noticed by Scaliger, who founded on it the neat and well-known epigram—

'Non temere antiquas mutat Vasconia voces, Cui nihil est aliud vivere quam bibere.'

It is curious that this same pun occurs, more than a thousand years before Scaliger, on a Roman tomb: 'Dum vixi bibi liberter; bibite vos qui vivite.'— Heuzer, Or. 6674.

mation to the consonantal or to the vowel condition: when the former, it has produced the French v, as in lavare, laver; levare, lever; privare, priver; novellum, nouveau; lixivia, lessive; viventem, vivant; November, novembre; gingiva, gencive. This, however, is not universal; for when the semivocal v inclines towards the vowel sound, it disappears in French: thus pavonem (pronounced pa-ou-onem in Rome) soon became pa-onem, whence paon; similarly avunculus (pronounced a-ou-unculus) soon was contracted to a-unculus; the Latin poets treat it as a trisyllabic word; it is also to be found as aunculus in several Inscriptions. Thus, too, we find in Inscriptions noember for no-v-ember, juentutem for ju-v-entutem. This loss of the v is to be found also in classical Latin, as in boum for bovum '; audii for audivi; redii for redivi'; amarunt for amaerunt\*, for amaverunt; pluere for pluvere \*. The Appendix Probi speaks of ais for avis; rius for rivus1. This loss of v<sup>2</sup> also takes place in French: as in payonem, paon: payorem, peur; aviolus\*, aieul; vivenda, viande; clavare, clouer; avunculus, oncle; ovicla, quaille; pluvia, pluie; caveola, geôle; uvetta\*, luette; obliviosus, oublicux.

§ 142. Final v is always hardened into f at the end of words: this phenomenon, which is opposed to the law stated below, § 167, is easily explained. Most of the popular words which change v into f are monosyllabic: bovem, bound; brevem, bref; cervum, cert; clavem3, clef; navem, ncf; nervum, ncrf; novus, ncu; novum, neuf; ovum, auf; salvum, sauf; servum, sarf; sevum, suif; vivum, vif; gravem, grif; vidvum, veuf4. Now we know that monosyllables shew a marked desire to strengthen themselves, either at the beginning by aspiration, or at the end, by introducing a strong consonant as a bulwark against phonetic decay. Besides, without insisting on this fact, the true cause of the change from v to f lies in the general tendency which leads the French language to replace soft consonants at the end of words by strong ones, in order to give greater support to the voice. For this reason the soft d and g in this position are replaced in pronunciation by the strong t and c, as in sang et eau, grand homme, where sang is pronounced sane, and grand,

<sup>1 &#</sup>x27;Rivus non rius, avis non ais.'-App. Probi.

<sup>&</sup>lt;sup>2</sup> In Andegavi, Pietavi. elavus, pronounced by the Romans Andega-ou-i, Pieta-ou-i, cla-ou-is. &c., the Latin v (ou) joins the preceding a, and forms the diphthong aou; which, following the law of transformation into French (au, then o, lastly ou), has formed the three words Anjou, Poitou, clou.

Why is the f of clef mute (whence the orthography cle) while it remains sonorous in the other words?

<sup>&</sup>lt;sup>4</sup> The following are longer words:—captivum, chétif; nativum, naif; pulsativum, poussif; ogivum \*, ogif; restivum, rétif.

grant<sup>1</sup>: and similarly the final  $\mathbf{v}$  is strengthened into  $f^2$ . When v is not final, there is no longer any reason for this strengthening process, and it remains unchanged according to § 140. This is the reason why the feminine of adjectives in -if is -ive; and why we have bovem, hauf, but bovarius, bouvier; navem, nef, but navirium \*, navire; servum, serf, but servire, servir; salvum, sauf, but salvare \*, sauver; nativum, naïf, but nativitatem, naïreté. The same rule enables us to explain the relation between the primitive chef and the derivatives chevel, achever, and between such words as bref and brevet, relief and relever.

## IV. THE PROLONGED CONSONANTS.

# (i) LABIAL. F.

§ 143. Initial f remains: fortem, fort; foeum, fiu; fata, fée; fabula, fable; foras, fors, which last word became hors at an early date, just as O. Fr. faras (a troop of stallions) and farder (clothes?) became haras and hardes. The Latin f being only one degree stronger than h, we find this same exchange between the archaic Latin fostis, fireum, folus, and the classical hostis, hireum, (olus?).

§ 144. Medial f invariably remains: refutiare, refuser; defendere, defendere, &c., with the one exception of serofella\*, derouelle.

§ 145. Final f remains: tufus, *tuf*; but, if followed by a mute a, it becomes v, as genovefa, geneviève.

§ 146. By the side of the spirant f the Latin had received from the Greek, and has passed on to the French, another aspirate  $\phi$ , the history of which must now be considered.

The Greek  $\phi$ ,  $\rho h$  (wrongly pronounced by us as an f), had a very distinct sound of its own, differing from the Latin f. Quinculian and Priscian tell us that to pronounce  $\mathbf{f}$  we must use a stronger aspiration than we should with  $\phi$ , and that in so doing the lower lip should not touch the upper row of teeth. The  $\phi$  was pronounced like the English  $\rho h$  in shepherd. A  $\rho$  thus aspirated necessarily dropped down to the common  $\rho$  when used by persons whose ears were not fine enough to recognise so slight a distinction; and thus at Rome, whilst the upper classes, in transferring  $\phi$  made it first ph, afterwards f, the common people made it a f, thus suppressing its delicate aspirate: as in  $d\phi \psi \eta$ , which has produced the double Latin form, the learned

<sup>1</sup> On the other hand, the strong s forms an exception, being softened into a z, at the end of words, as in nous aimons, aux enfants, chevaux admirables, &c., where nous, aux, chevaux, are pronounced nou-z, au-z, chevau-z.

<sup>&</sup>lt;sup>2</sup> This tendency is so strong that it even transforms words of learned origin, which also change final v into f, as in activus, actif; passivus, passif; nativus, natif; relativus, relatif.

aphya, and the popular apua. Thus, while the learned called the dupone's amphora, and the στροφή stropha, the people made them ampora and stropa, as the Appendix Probi (in the time of Nero) tells us. Probus blames the vulgar pronunciation;—'stropha non stropa, amphora non ampora. This vulgar pronunciation remains in a few French words: thus πορφύρα produced the popular Latin purpura, whence pourpre; κόλαφος has both forms, learned colaphus. and vulgar colapus, so frequent in Merovingian documents, whence () Fr. colp, now coup<sup>1</sup>; φάλαγγα, in classical Latin phalangae, popular Latin palangae, has preserved the latter form in the French palan. palangue. On the other hand, the ph used by the Latin literati to represent φ in the words they borrowed from the Greek (as φιλοσοφία, philosophia), soon, in spite of the outcies of the grammarians, was confounded with the Latin f. Side by side with phaselus, phlegma, sulphur, tophus, sylphi, phalangae, &c., we find, at an early date, the forms faselus, flegma, sulfur, tofus, sylfi, falangae, &c. This change of ph into f goes on in French in popular words2: as phantasma, fantôme; philia, fiôle; phasianus, faisan; elephantum, olifant; graphium, greffes. Similarly orphaninus\* produced the O.Fr. orfenin, whence orfelin, which the learned of the middle ages altered to orphelm, in order to bring it nearer to the original Latin form.

# (ii) Dentals. S, X, Z.

S.

§ 147. Initial s, if followed by a vowel, remains: solus, sail; subtus, sous; sella, selle; surdus, sourd. But st becomes ed; sp, esp; se, esc, the prefixed e tending to render the pronunciation more easy: thus we have stare, O. Fr. ester; seribere, O. Fr. estere; sperare, espérer; and this s is not uncommonly absorbed, its place being marked by the acute accent on the initial e: as eserire, écrire; statum, estat, état. Similarly ast becomes át, as in astre, âtre.

§ 148. Medial s remains: as cerasus, cerise; quassare, carser.

<sup>&</sup>lt;sup>1</sup> Sometimes a **p** sprung from a  $\phi$  is treated in French as if it were an original **p**: thus the Greek  $\zeta(\zeta c\phi \rho r)$  became **ziziphus**, with a popular form **zizupus**, which then underwent the regular change of **p** into  $\delta$  (§ 111), whence **zizubus**, whence the ill-formed *jujuhe*.

<sup>&</sup>lt;sup>2</sup> It remains as ph in learned words: philosophia, philosophie; phalangeus, phalange; phoebus, phéhus; except in some scientific terms, introduced somewhat early (as we have seen in § 146), which have changed ph into f, as φαντασία, fantaisie; φανταστικός, fantastique; phrenesis, frénésie.

There are a few of these double consonants which have a like origin; as cophinus, common Latin cofinus, coffre.

But se'r drops the s, as is seen in croscere, croître; pascere, paître; cognoscere, connaître. Similarly sm, sn, se, st, sp, often lose the s, as in asinus, âne; baptisma, baptime; auscultare, écouler; magister, maître; despectum, dépit, &c.; the preceding vowel is usually accented. This disappearance of the s is at least as old as the twelfth century (if we regard the pronunciation); though the written language did not drop it till the middle of last century; it is retained in the Dictionnaire de l'Academie, a.d. 1740. In some cases the s is retained, as restare, restr; accostare, accoster; though costa becomes côte.

§ 149. Final s sometimes remains: ursus, ours; subtus, sous; minus, moins. In Portus Veneris, Port Vindres, we have also an unusual instance of the persistance of a genitive case. Or it becomes z, as easa, chez; nasus, mz; adsatis, asvez. Or x, as duos, deux; tussis, toux; otiosus, oiseux; sponsus, époux. Ss sometimes becomes s, as passus, fus; crassus, gras.

#### X.

- § 150. Medial x sometimes remains: as sexaginta, soixante. Or it becomes ss: as examen, evant, laxare, lauser; coxa, enisse; axilla, asselle. Sometimes it drops to s, as in dextrarius, destruer.
- § 151. Final x remains: sex, six; luxum, luxe. In buxus, buis, it falls to s.

#### Z.

§ 152. Initial z remains: zelum, zèle; zelosus however becomes jaloux; and jujube is an ill-formed representative of zizyphum.

## V.—Liquids. R, L.

#### R

- § 153. Initial r remains: regnum, règne; rupta, route; regem, roi; ripa, rive.
- § 154. Medial r remains: soricem, souris; carmen, charme. It also becomes l in some few cases: as paraveredus, palefroi. It also sometimes becomes s, as in pluriores\*, plusieurs. It is sometimes dropped before s by assimilation, dorsum = dossum, and then by dropping one s, as dorsum, dos; persica, O. Fr. pesche, péche.
- § 155. Final r remains usually: as audire, our; carrus, char; but in some cases it becomes l, as altare, outel; eribrum, crible; and sometimes it becomes s, as in advorage, arroser; chaise for chaire, from eathedra.

#### L.

§ 156. Initial 1 remains: littera, lettre; lingua, langue; legem, let. It also becomes r, a change which dates back to Merovingian days: luseiniola, ressignal. Also n, as libella, niveau.

§ 157. Medial 1 remains: as aquila, aigle; filius, fils; circulus, cerele. It also becomes n, as is seen in posterula\* (O. Fr. posterie, posterne), poterne; margula (O. Fr. marle), marne. Also r, as ulmus, orne; cartula, chartre; capitulum, chapitre.

This I is often softened into u in the combinations of, all before a consonant: as collum, cou; auscultare, écouler; pulverem, foudre; sulphur, soufre; colliphus, coup: also all before a consonant drops to au, as calcare, O. Fr. caucher; calidus, chaud. This process took place in French times. The I is sometimes strengthened by being doubled, as bajulare, bailler; filia, fille. But sometimes II is reduced to l, as gallina, geline.

§ 158. Final 1 remains in solus, seul; sal, sel; supereilium. sourcil; mel, mil. A final double 1 is either reduced to a single l, as allium, ail; mille, mil; or softened to u, as agnellum, agneau.

It is sometimes entirely dropped, as angelus, ange; O. Fr. oil, oui; O. Fr. nennil, nenni.

## VI.-NASALS. M, N.

#### M.

§ 159. Initial m remains: mare, mer; manus, main; mille, mil. It also becomes n, as mappa, nathe; matta, natte.

§ 160. Medial m remains: camera, chambre; computare, compler (which, in comparison with its 'doublet' conter, seems to be a more modern form): or it becomes n, as semita, sente; computare, conter; simius (simjus), singe; primum, prin in printemps. Also the m in mn sometimes becomes n, as columna, colonne: while in other cases, as alluminare, allumer, the n disappears. In the peculiar case dumetum, duvel, the m has become b in Latin days, and the b naturally falls to v.

§ 161. Final m remains: dama, daim; nomen, nom; famem, faim. Also it becomes n, as rem, rien; meum, tuum, suum, mon, ton, son. It also disappears, when it is the second of two consonants, as vermis, ver.

#### N.

- § 163. Medial n remains: as ruina, ruine; mentiri, mentir; mentum, menton. Also it becomes m, as nominare, nommer; earpinus, charme; hominem, homme. Also l: orphaninus\*, orphelm; Panormus, Paherme; Bononia, Bologne. Also r: ordinem, ordre; diaeonus, diaere; Londinum, Londres. N also disappears in some cases before the origin of the French language, as in pagensis, pagesis\*, paix, paix. Also, it is lost from such combinations as nv. as eonventus, convent; ne, as coneha, coque; rn, as alburnum, auheur; ns, as in mansionem, maison; pensare, peser: in these cases it was probably lost in late Latin. In some cases this n is doubled, as inimieus, comemi; sonare, sonner; tonare, tonner.
- § 164. Final n remains: non, non; sonus, son; bonus, bon. Or it disappears, as nomen, nom. In words having nn in the last syllable, one n disappears, as annus, an; pannus, pan; bannum, ban; stannum, élain.

### PART II.

## THE PRINCIPLES WHICH RULE THE PERMUTATIONS OF LANGUAGE.

- § 165. We may thus sum up the results of our inquiry by stating the laws on which the change of the Latin letters into French rests; and these (using the language of natural history) we may call the laws of *least action*, and of *transition*.
- § 166. I. Law of Least Action 1.—It is a characteristic of every human effort to try to exert itself with the *hast action*, that is, with the smallest possible expenditure of energy. Language follows this law, and its successive transformations are caused by the end avour to diminish this effort, and by the desire of reaching a more easy pronunciation. The knowledge of this endeavour, when combined with a study of the structure of the vocal apparatus, gives us the true cause of these changes of language.
- § 167. This need of greater ease in pronunciation shews itself in the general weakening of the Latin letters when they pass into French words: thus the c and g, pronounced hard by the Romans

<sup>&</sup>lt;sup>1</sup> In his admirable *Grammaire comparée du Sanskrit, du Grec, et du Latin,* M. Baudry has shewn the influence of these two principles on the formation of ancient languages. I hope to shew that they may be further confirmed by the history of the French language.

before e and i<sup>1</sup>, as fekerunt, kivitatem, guemellus, guibba (fecerunt. civitatem, gemellus, gibba) have become soft in French, the hard e passing into the j sound, the hard g into the j sound, so that where the Latins said kedere, aguere, the French say coder, agir. Similarly the Latin p is softened into v, ripa, crepare, saponem, becoming rive, crever, savon: in some cases the weakening is so great that the Latin letter altogether disappears; as erudelis passes into cruel, sudare into sucr, obedire into obeir.

§ 168. In other cases, the letters in contact being dissimilar, the French language assimilates them in order to make the pronunciation easier; thus it changes dr into rr; adripare, arriver; quadratum, carré; similarly tr is softened into rr, as putrere, fourrir; latronem, larron. Here moreover, as in most cases, the French only follows the example of the Latin language itself, in which the tendency towards assimilation was strongly developed; thus the Romans said arridere for adridere, arrogantem for adrogantem, &c. From this regular progress of languages towards an easier pronunciation, we may conclude that languages always descend, never climb, the scales of sounds: thus while tr is softened into rr, rr is never hardened into tr; latronem may descend into larron, but parricidium never ascends in French to patricide; either it must remain as it is, parricide, or grow softer still by simplifying the rr into r. Similarly II is often reduced to l, as in ampulla, ampende; bulla, boule.

§ 169. Another phenomenon, which corresponds to this assimilation of letters, and also springs from the desire of ease in pronunciation, is the separation or differentiation of similar letters, so as to render their emission from the mouth easier. If a Latin word has two r's, in French the pronunciation will be softened by the change of the one r into l, as eribrum, crible: thus the Latin parafredus becomes palefroi, not parefroi; peregrinus becomes pelerin, not pérerin. So too, if there are two l's, the French changes one into r; lusciniola becomes rossignol, not lossignol. This process has received the name of dissimilation. This balancing of letters in the effort after a vocal equilibrium was not unknown to the Latins, who, to avoid the two r's, said ruralis, muralis, instead of ruraris, muraris: to avoid the two l's, they said epularis, stellaris, instead of epulalis, stellalis<sup>2</sup>.

§ 170. Together with this 'dissimilation,' which seeks to avoid the disagreeable repetition of the same letter, we must notice another

<sup>&</sup>lt;sup>1</sup> See the word agencer in the Dictionary.

In a word, the suffixes aris. alis, being alike in origin and meaning, the Romans preferred aris, when the word had already an 1 in it (as stellaris, from stella), and alis, if the word had an r in it (ruralis, from ruris). See Baudry, Grammaire comparée du Sanskrit, du Grec, et du Latin, p. 101.

process, 'metathesis,' the transposition or displacement of a consonant, which is also done to facilitate pronunciation: thus, formatieum, turbare, paupertatem, at first became formage, tourver, fauverté, as may be seen in Old French texts; and then by metathesis of the r, fromage, trouver, pauvreté.

§ 171. II. Law of Transferon. The law of least action shews us the cause of the transformations of language, and of the permutation of letters; the law of transition will teach us the conditions of these changes and their course. 'Permutation moves on step by step, and never more than one step at a time. A letter does not at a bound change its order, degree, or family; it can only make one of these changes at once!' Thus,—to return to the word putrere, given above,—the classical putrere did not turn at once into the French pourrir; it passed in the Merovingian Latin into the forms putrire, pudrire, and in Old French through the successive forms podrir and porrir, whence finally pourrir: the tr had to become the intermediate dr before it reached rr.

The Dictionary will present to us, so far as it is possible to write it, the history of every letter, and will connect the Latin with the French by the intermediate links of medieval Latin and the Old French.

## PART III.

# EXCEPTIONS TO PHONETICS. EFFECT OF CORRUPTION ON THE FORMATION OF THE FRENCH LANGUAGE.

§ 172. Though the laws of Phonetics rule with precision almost all the words in the French language, there are still a few which seem, as far as we know, to be refractory, and to refuse to be classified under established heads: just as in natural history there are some beings which have not yet found their proper place under the divisions of science.

These exceptions to the rules of Phonetics have a double cause: or rather, the infraction of the rules is only apparent, and is due to influences which we are as yet unacquainted with, and to secondary laws which limit or modify the primary ones; or these infractions of law

<sup>1</sup> F. Baudry, Grammaire comparée du Sanskrit, du Grec, et du Latin, p. 83.
h 2

are the result of corruption. Words thus corrupted cannot be used as arguments to throw doubt on the existence of the laws of language and their firm establishment: for, as M. Littré says, 'it is by means of the general and positive rules that we can affirm that there is an error even where we do not know the circumstances or the conditions of the error; they enable us to divide the whole into the regular and correct part and the part altered and mutilated by the inevitable faults of time and of mankind.'

And besides, in many cases the corruption is only apparent, not real, or if it does exist, it is not the French language that is to blame: thus écouter (Old French escouter, escolter, originally esculter) is a very irregular outcome of the classical Latin auscultare, for the Latin au never becomes e in French, and if the word had been regularly formed, it would have been escouter, not escouter, as the Latin au habitually becomes o (aurum, or; pausare, poser, &c.). Now here to all appearance is a flagrant exception, and Phonetics seem to be at fault. This, however, is not the case. Phonetics are blameless; for we know from Flavius Caper that in the third century men said, not auscultare, but ascultare, whence according to rule, comes the form escouter, as a becomes e (patrem, père; pratum, pré; gratum, gré; &c.). Thus in this case the corruption dates back to the popular Latin, and the French language has nothing to do with it.

The same is the case when the French language seems to violate the Latin accent, in such words as encre from encaustum; persil from petroselinum, borrowed by the Romans from the Greek (ε,καυστον, πετροσέλωνον). Here the French returns the original Greek accent, which had been preserved by the Latins in these borrowed words. In souris, siegle, mordere, foie, fin, faile, from soricem, seeale, mordere, ficatum, finitus, fastigium, the accent had already been displaced in vulgar Latin, which said soricem, séeale, mordere, ficatum, finitus, fastigium.

But beside these apparent infractions of the laws of Phonetics, there are also real exceptions, caused by corruption or chance,—cases of Latin words in which the passage into French is governed by no known laws, and which sound like painful discords in the harmonious unity of the language. These errors are man's mark left on the vocabulary, the arbitrary element in the formation of the French tongue. If we compare with their Latin originals the words germandrée, chamaedrys; amiden, amylum'; camomille, chamaemelum; ancolie, aquilegia; érable, acer arbor; échalole, Ascalonicum; estragon, draconem; réglisse, liquiritia\*; garofle, caryophyllum; maryolaine, amaracana\*, we shall find ourselves face to face with the worst corruptions in the language: let us note at the same time that

<sup>&</sup>lt;sup>1</sup> Here the corruption is older than the French language; amidum for amylum is found in a Latin document of the ninth century.

almost all these words indicate medicinal plants, and have come down to us through herbalists and apothecaries. Nor is it astonishing that a long special use has deformed and corrupted such words; for the people often torture learned words so as to give them a sense of some kind—thus one may any day hear the common folk ask for de l'eau d'anon for laudanum, and the like. To this class also belongs boutique, from apotheca, one of the most striking instances of corruption. Apotheca would regularly have produced abouture, as the Latin initial a never drops out in French, and it is contrary to rule for the Latin **c** between two vowels to become q in French at the end of a word; in that position the Latin e always disappears (baca, baw; braca, braie; ebriáca, irraie); so that, like theca, taie, apotheca ought to have become aboutate<sup>1</sup>. If we add to this list a few more words<sup>2</sup>, we shall have the full catalogue of all forms due to chance or inexplicable disturbance: it will be seen how very small their sum total is, compared with the whole French language. Still, it is most important for us to be able to ascertain the truth. From the days of St. Augustine, who held that the explanation of words, like the interpretation of dreams, depends on the fancy of each person who tries them, down to Voltaire, who believed that chance or corruption were the sole causes of the revolutions of language, human speech has ever been regarded as the product of the arbitrary caprice of men. Modern science has now shewn that languages are not the work of chance; that they are a natural and organic growth, of which man is not the author, but the instrument. Philology has narrowed to its proper limits the part played by caprice and corruption in the formation of languages, without utterly annihilating it.

<sup>&</sup>lt;sup>1</sup> Aboutaie would not be the final form. We know on one hand that the Latin  $\mathbf{p}$  does not stop at b, but drops down to v; on the other hand we know that  $\mathbf{t}$  between two vowels always drops out in French; so that aboutaie would become avoutaie, and finally avouaie, the last regular contraction of apotheca.

These irregular forms are:—emendare, amender; amygdale, amande; tremere, cramdre; carbunculus, escarbonele; scintilla, esmelle; sarcophagus, cercuail; fracticium, friche; unicornis, heorne; umbil.cus, nombril. As to the modern words lendemain, loriot, herre, which in Old French were rightly spelt endemain, oriot, urre (see the Dictionary for these words), they must be reckoned as corruptions not of the Latin word, but of the French.

### PART IV.

## DERIVATION.

- § 173. Before we enter into necessary details in dealing with derivation, under the three heads of substantive, adjective, and verb, we must forewarn our reader that every suffix must be regarded from three points of view;—those of *origin*, form, and accentuation.
- § 174. 1. Origin.—Suffixes may be of Latin origin (as premier from primarius), or of French origin, that is, formed on the model of Latin suffixes (as encrier from energy) but having no correspondent Latin original.
- § 175. 2. Form.—We must carefully distinguish suffixes of learned formation from those of popular origin; i.e. such derivatives as primaire, séculaire, scholaire, which come from the learned, from such as premier (primarius), séculir (secularis), écolier (scholaris), which have been formed by the common people.
- § 176. 3. Accentuation.—Here the Latin suffixes may be put under two heads: (a) the accented, having a long penultimate, as mortális, humánus, vulgáris; and (3) the unaccented or atome, with a short penultimate, as ásínus, pórticus, móbilis.
- § 177. Accented Latin suffixes are retained in the French, as mortel, humain, vulgaire. The language having got possession of these suffixes, -cl, -ain, -aire, presently uses them to form new derivatives, applying them to words which had no corresponding suffixes in Latin: by such additions have been formed such words as 770 u.l., loint-ain, visionn-aire, derivatives created at first hand by the French language.
- § 178. Atonic Latin suffixes, ás-inus, pórt ieus, jud-ieem, all perish as they pass into French by a natural consequence of the law of accentuation: thus ásinus gives us áne; pôrtieus, forche; júdicem, juge. After losing the atonic i these suffixes had no strength left in them for the production of new derivatives. What, in fact, does the suffix -le in gré-le (gracilis); humb-le (humilis); dout-le (duetilis), represent to the common car? Who would believe that these three French words are formed by means of the same suffix, if he had not the Latin words before him? While the Latin -ilis is very fruitful, the French -le is but a sterile termination. Similarly, it may be seen by such examples as duab-le (diabōlus); meub-le (mobilis); feuf-le (popúlus), that the three Latin suffixes, -ōlus. -ilis, -úlus, are uniformly merged in the French -le; a fact which indicates

the indistinctness of their sound on the popular ear, owing to the dropping of the atonic penultimate vowel. It was not till several centuries after the birth of the French language that the learned, not understanding the proper function of accent in the formation of terminations, foolishly followed the Latin form, imposing on it a false accent, and displacing the true accent. Then sprang up words like portique (porticus); mobile (mobilis); fragile (fragilis); words opposed to the genius of the French language, barbarous words, neither Latin nor French, defying the laws of accent of both languages. In a word, of these two classes of suffixes, the former, the accented, are alone strong enough to bear any development in French; the others, the atonic, have fallen dead, without producing a single new derivative. These are the principles which will form the basis of our study of suffixes.

#### SECTION I.

#### DERIVATION OF SUBSTANTIVES.

LATIN substantives, adjectives, verbs, prepositions <sup>1</sup>, have produced French substantives.

#### CHAPTER L

French Substantives derived from Latin Substantives 2.

§ 179. The French language has carried over several thousands of Latin substantives, such as chantre, eantor; patre, pastor; leçon, lectionem, &c.; and has also created a vast number of others from French substantives already existing; such as journée, année, soirée, matinée, from jour, an, soir, matin; chevalerie from chevaler, &c. All these formations are studied in detail in §§ 191, sqq., under the heads of the suffixes -alis, -anus, -aris, -arius, -aticum, -atus, -etum, -eria\*, -ianus, -ile, -iste, to which the reader is referred.

We do not here speak of pronouns, for there is only one French word which has sprung from a Latin pronoun, that is, *identité* from idem; and even in this case, it is not from classical but scholastic Latin, which produced the forms identitatem and identieus; so that even this word is not of popular origin.

2 For all parts of this treatise on derivation and composition I have

tollowed Matzner's admirable classification.

#### CHAPTER II.

French Substantives derived from Latin Adjectives.

§ 180. Just as un mort stands for un homme mort, un mortel for un être mortel, by excluding the substantive and calling the object by the name of its epithet, so the words matin, jour, hiver, have been formed from the Latin adjectives matutinum, diurnum, hibernum, sc. tempus: similarly cierge, roche, neige, grange, lange, longe, lé, chéne, droit, hôtel, are from the adjectives eereus, rupea \*, nivea, granea \*, lanea, lumbea \*, latus, quereinus \*, directum, hospitalis. Several substantives of this class, such as sanglier, linge, coursier, boucher, were adjectives in Old French (as may be seen under these words in the Dictionary), the Old French phrase running un drap linge, un pore sanglier, un cheval coursier, un écu bouclier; they became substantives at a comparatively late epoch in the history of the language. For details, see under the suffixes cited in § 179, and also under the three suffixes, -tas, -tudo, -ĭa (it-ia).

#### CHAPTER III.

FRENCH SUBSTANTIVES DERIVED FROM LATIN PREPOSITIONS.

§ 181. These are very rare, whether they come direct from the Latin, as contrée from contrata \* (derived from contra), entrailles from interanea (derived from inter), or whether they have been formed first hand by the French, as avantage from avant, devanture from devant.

#### CHAPTER IV.

## FRENCH SUBSTANTIVES DERIVED FROM LATIN VERBS.

- § 182. The French language derives substantives from verbs either by using the root of the verb, with or without suffixes; or by using the present infinitive, or the present participle, the past participle, or the future passive participle.
- § 183. I. i. From the verb-root with suffix.—By joining to the verb-root certain terminations, each of which brings with it a special modification of the meaning, the French language has created a multitude of substantives: thus from abreuv-er, éclair-er, all-er, it has produced abreuv-oir, éclair-eur, all-ure. These suffixes thus used for the creation of substantives are about twenty in number [-alis, -anda (-enda), -antia, -anus, -aldus, -ardus, -aris, -arius, -aster, -aticum, -atus, -etum, -eria\*? -ela, -ianus, -icius, -ile, -ina, -issa, -iste, -men (-amen, -imen, -umen), -mentum, -or (-tor, -sor), -orius, -tionem, -ura]. See Sect. III. Chapter I. for the detailed study of each of these suffixes.

§ 184. ii. From the verb-root without suffix.—The French language creates new substantives by taking them from the verb, by the simple addition to its root of the gender-ending: thus, after the Latin verbs apportare, purgare, appellare, have given the verbs apporter, purger, appeler, the French language takes the roots of these verbs, appear, purge, appel, and uses them as new substantives, which had no originals in Latin, and are called rerbal substantives. The verbs so treated number about three hundred 1, and are all of the first conjugation 2. A certain number of these substantives are concrete: as ragnit from ragoûter, rabat from rabattre, décor from décorer, égout from égoutles, empois from empeser, engrais from engraisser, récerlère from réverbèrer. repaire from O. Fr. repairer, réchaud from re and échauder, dépêche from dépleher, eri from erier, conserve from conserver, contour from contourner, traile from trailer, relief from relever, right from replier; the most of them are abstract, and indicate the action expressed by the verb: such are appel from appeler, apport from apporter. baisse from baisser, aide from aider, avance from avancer, étouvante from épouvanter, offre from offrir, pêche from pecher, recherche from rechercher, tremp from tremper, &c.3

Whence has the genus of the French language learnt so fruitful and ingenious a process, enabling it to create so large a number of substantives which have no Latin putent? The answer is at hand—The French and the Latin are simply successive conditions of the same language; and there is no grammatical process employed in the French which is not to be found, in germ at least, in the Latin; thus the Romans in their day created (especially in their time of decadence) verbal substantives out of their infinitives: thus from probare, luctari, &c. came proba, lucta, which appear for the first time long after the verb; proba in Ammianus Marcellinus, lucta in Ausonius.

Two characteristic facts show us with what fertility the French language has developed this process thus handed down to it from the Latin. On the one hand, it has been applied to words which are completely strangers to the Latin language, and such substantives as galop, dibut, regard, have been formed from verbs of Germanic

¹ These derivatives have a peculiarity which is quite unique; they are shorter than the words whence they come. We must carefully avoid confounding these substantives, which spring from verbs, and are therefore subsequent to them, with those which have given birth to verbs and therefore existed before them (such as *fête*, *lard*, whence *fêter*, *larder*).

The eight or ten substantives (such as maintan from maintenir, recueil from recueillir, accueil from accueillir) which belong to other conjugations have been formed by analogy. The other conjugations have formed no verbal substances like those of the first conjugation, because they have at their disposal the strong participal substantives (studied in § 188).

3 About one-third of these substantives are of the masculine gender.

origin, such as galoper, debuter, regarder; on the other hand, the process is still in active operation, and daily gives birth to fresh words; thus of late years have appeared casse from casser, chauffe from chauffer<sup>1</sup>; and this fact shews us the persistent nature and spontaneous action of the laws of language, and the certainty with which the popular instinct advances, quite unconsciously, in the formation of new words.

- § 185. II. The Infinitive.—From the present infinitive come a tolerably large number of masculine substantives, such as din r, dijenner, seuper, gout r, vivre and vivres, manger, boire, loyer, savoir, fouvoir, deveir, plaisir, être, loisir, repentir, avenir, sourne, baiser, souvenir, &c., all of them used as masculine substantives.
- § 186. III. The Present Participle.—Just as the Latin language had created a substantive, amans (a lover), from the present participle of the verb amare, so the French language has created, by help of present participles, the substantives marchand from mereantem, manant from manentem; sergent, servientem; séant, sedentem, to say nothing of forms which have come direct from the French participle, such as tranchant, vivant, servant, gouvernante, méchant, from trancher, vivre, servir, gouverner; méchant, O. Fr. meschant, is from the old verb meschevir, like séant from scoir, échéant from échar.
- § 187. IV. The Past Participle.—The Latin tongue possessed the faculty of creating substantives out of its past participles: thus from peccatum, p. p. of peccare, came the substantive peccatum, a sin; from fossa, p. p. of fodere, came fossa, a ditch, &c. And the French language, not content with thus turning the Latin participles into substantives (as in avoué, advocatus; écril, scriptum, &c.), in its turn expanded this grammatical process, and created from French participles a multitude of substantives masculine and feminine, such as fait, reçu, dú, réduit, masculines, and croisée, nichée, durée, tranchée, participle, tissue, feminines, all of them past participles of the verbs faire, devoir, recevoir, &c. And this it does especially with feminine participles. The number of substantives thus obtained is considerable; for the French language forms substantives with both classes of participles, the strong as well as the weak.

¹ La chausse, a surnace; une surface de chausse, a fire-surface, surface. ² A strong participle is one which is accented on the root, as dietus, factus, tráctus; a weak participle is accented on the ending, as am-átus, purg-átus. Similarly, in French, dt, fait, joint, are strong; aimée, purgee, weak participles. The strong participles are those which ordinary grammarians class mechanically under the name of irregular participles, and weak ones under the name of the regular. For further details, see Historical Grammar, p. 140.

- τ. Formed from weak (or regular) participles; such as chevauchée, accouchée, &c.
- 2. Formed from strong (or irregular) participles; such as dtl, joint, réduit, trait, &c. We know (see Historical Grammar, p. 140) that Modern French has replaced most of these strong participles by weak ones; still the substantives formed from the strong forms remain: thus the old feminine participle défense, defensa, has been replaced by the weak form défendue, when used as a participle, while it remains in its old form as a substantive.

§ 188. The following is a list of these strong participles <sup>1</sup>, no longer in use as such, but still remaining as substantives.

It will be seen that the modern form, the correspondent weak purticiple, is set side by side (within brackets) with the old strong participle, which has become a substantive, and the Latin word whence it comes:—

Emplette, implicita (employée); exploit, explicitum (éployé); meute. movita (mue), and its compound émeute, exmovita (émue); pointe, puneta (poindre, in the sense of to prick = pungere; this word remains as a participle in the word courte-feinte, in O. Fr. coulte-pointe, from Latin culcita-puncta); course, cursa (courue); trait, tractum, and its compounds por-trait, retrait, traite, &c.; source, sursa (surgie), and its compound ressource; (the verb is sourdre, surgere); route, rupta (romfue), and its compounds déroute, banqueroute, i.e. banque rompue; défense, defensa (défendue), and its congeners offense, &c.; tente, téndita (tendue), and its compounds attente, détente, entente, &c.; rente, réddita (rendue); pente, péndita \* (pendue), and its compounds soupente, suspendita\* (suspendue); poste, posita (posée); repas, repastus (repu); crost, créscitum \* (erue), and its compound surcroît; semonce, formerly semonse, summonsa\*; enterse, intorsa\*; suite, séquita (suira), whence poursuite; rente, véndita (rendue); ferte. perdita (ferdue); quele, quaésita (quelée), and its compounds conquele, requele, enquele; recelle, recepta (reque); dette, debita (die); réponse, responsa (répondue); élite, electa (élue); tonte, tondita (tondue); mors, morsus (mordu); fonte, fundita (fondue); compound refonte; torse, tensa (tendue); ponte, pondita \* (pondue); fente, fendita (fendue); faute, fallita (faille); maltote, male-tollita; boite, bibita

¹ More than one participle in this list has never been used in French except as a substantive; and its participial usage dates either from the classical or the rustic Latin, which latter often created forms of which no trace remains in any text, but which survive in the corresponding French words. Thus entorse, semonce, suite (in Italian segunta), cront (It cresciuto), cannot answer to the classical forms intorta, summonita, secuta, erotum, but to the popular forms intorsa\*, summonsa¹, sequita\*, crescitum\*.

(buc); secousse, succussa (secouée); and its congener rescousse, from O. Fr. escousse, which is the Latin excussa; fute, fúgita; promesse, promissa (promise); écluse, exclusa (exclus); imfól, impósitum (imfosé); défól, depósitum (défosé); préról, praepósitum (préfesé); suffól, suppósitum (supposé); entrefól, interpósitum \* (entrefosé)¹; descende, descendita \* (descendue); pland, plácitum².

Thus, while Old French said cire mors, morsus; cire roule, rupta, for cire mordue, rompue, Modern French, replacing the Old French mors and roule by mordu and rompu, created from these old participles new substantives (un mors de cheval, une roule). In a few cases, very rare ones, the strong participle survives beside the weak one; as in un fil lors, and un fil tordu, which has not hindered the formation of the substantive lort, contormably with the rule we have described 3. Side by side with these two forms of expression we have the triple form une femme absolue, une femme absolue, and the substantive absolue.

#### SECTION II.

## Derivation of Adjectives.

§ 189. Adjectives are formed 1. by the present participle; as charmant, savant, dévorant, the present participles of the verbs charmer, savoir, dévorer. It often happens that a verb has disappeared in Modern French, while its present participle remains as an adjective; thus the Old French verbs méchoir, béer, galer, remain only in their participles méchant, béant, galant, which are now used as adjectives.

2. From the past participle: - foli, connu, fleuri, &c., from folir,

connaître, fleurir, &c.

3. From the verb-root.—This process, which we shewed, § 184, to be so fruitful for substantives, has not been equally so for adjectives; still some traces of it occur in the adjectives gonfle from genfler, dispos, which comes from disposer, not from the Latin dispositus.

<sup>2</sup> We may add to this list dessert, desserte, formed by analogy from the verb desservir; absoute, absoluta; soute, soluta; chute, caduta \*, although

these participles are not strong in Latin.

<sup>&</sup>lt;sup>1</sup> Propos and repos have no place in this list, as they are the substantives of the verbs proposer and reposer, as has been seen in § 184.

I have naturally included in this list only those strong participles which have remained only as substantives, leaving out all those which remain in French as both participles and substantives; such as dit, joint, adjoint, réduit, conduit, conduite, produit, enduit, biscuit, oue, clos, enclos, couvert, découverte, mise, remise, prise, surprise, defaite, crue, contrainte, emprente, femte, &c.

which would have given dépôt, as may be seen from impositus, impôt; suppositus, suppôt; praepositus, prévôt.

4. By suffixes.—By this means the French language produces fresh adjectives; (a) from substantives, as mensonger, courageux, agé, from mensonge, courage, age; or (3) from adjectives, as jaunatre, lourdand, vicillot, from jaune, lourd, vicil; or (y) from verbs, as comparable, redoubtable, semblable, as comparer, redouber, sembler; or (8) from prepositions, as ancien from antianus\*, derivative of ante; sourcrain from superanus\*, derivative of supra. In the next chapter will be found a list of all these suffixes, and of the derivations which they have supplied to the French language.

#### SECTION III.

#### LIST OF NOMINAL SUFFIXES.

§ 190. Here follows a detailed catalogue of nominal suffixes (i.e. of suffixes which form substantives and adjectives), divided, as habeen already done in § 176, into accented and atome. In this list of suffixes will be found the three of Germanic origin (viz. -ard, -ine, and -aud), which are to be met with in the French tongue: diminutive and augmentative suffixes will be treated of separately.

#### CHAPTER L

#### ACCENTED SUFFIXES.

- § 191. Alis, ale become al, el' in popular French<sup>2</sup>: canalis<sup>3</sup>, chenal; diurnalis, paurnal; regalis, royal; legalis, legal; hospitale, hôtel; capitale, cheplel; natalis, noel; ministrale\*, menestrel; mortalis, mortel; carnalis, charnel; vocalis, royelle. Pluralis produced in the regular way the Old French plurel, which was changed afterwards into the diphthongal plurel, by changing e into ie. See § 56.
  - § 192. Antia, entia become ance in popular French 4: as in infantia,

<sup>1</sup> For the letter-change, see § 54.

<sup>2</sup> The learned form is al; cardinalis, cardinal; hospitale, hôpital.

3 Canalis has also produced another form, chenel, which was afterwards softened into chéneau, just as bel became beau.

4 The learned form from antia is ance, as in arrogantia, arrogance; of entia, ence, as in innocentia, innocence.

enfance; continentia \*, contenance. We know that these abstract substantives were formed from the present participle by adding the suffix -ia; thus from infantem has come infantia; from continentem. continentia, &c. The French language, imitating this process, has similarly created vengeance from vengeant, crovance from croyant, confiance from confiant, échéance from échéant, jourssance from jouissant. Participial substantives often come from forms which have disappeared from Modern French, and are, as it were, living witnesses to their dead ancestors: thus chance, formerly cheance, carries us back to chéant, participle of chéoir, primitive form of choir, cadere; and échéance carries us back, through échéant, to échoir. Frant, participle of fier, gives us the Old French substantive fiance, whence again the verb fiancer. Engeance, finance, outrecuidance, similarly come from the old verbs enger (to multiply oneself); finer (to conclude a bargam, pay); outrecuider, ultra-cogitare. Créance answers to the archaic participle créant, to be found in the compound mécréant. Doléance, whence condoléance, similarly carries us through a participle deléant, to a verb doleier, from a Latin type dolicare b; while nu ince, larlance come through nuant, ladant, from the old verbs nuer, lader, which are derived from the words nuc, lait.

§ 193. Andus, endus. The passive future participle has provided us, through its nommative plural neuter, with a certain number of substantives. We must, however, take note that the French language, following its customary use 1, has treated these neuter plurals as if they were feminine singulars, and has produced from them a number of feminine substantives, such as viande from vivenda; provende from praebenda 2; whence, by analogy, the French derivatives effrande from offrir; juvande from juver; réprimande from réprimer, &c

From the combination of the suffix and with the suffix ier (see § 198), come the derivatives in andier, such as taill andier from tailler, filandière from pler; lavandière from laver, &c.

Those who wrote the Merovingian Latin seem sometimes to have mistaken neuter plurals in a for feminine singulars of the first declension. Thus from pecus, pecora, was formed pecoras: 'inter pecoras' says a Chartulary of A.D. 757 (in Muratori). The same author has published a collection of industrial receipts of the Merovingian epoch, in which we find a feminine pergamina, from the neuter plural of pergamenum: 'pergamina quomodo fieri debet: mitte illam in calcem, et jaceat ibi per dies tres.' In this way the French language has produced a certain number of feminine substantives; as mirabilia, merveille; biblia \*, bible; animalia, aumaile; tempora, tempe; brachia, brasse; arma, arme; muralia, muraile; volatilia, volaile; folia, femile; saliceta, saussaie; and all the words having the suffix aie from eta, plural of etum.

2 Learned forms are legende from legenda; prébende from prachenda.

§ 194. Anus, ana, become ain, en—aine, enne<sup>1</sup>; as eastellanus, chitelain; albanus, aubain; seribanus, écrivain; pullanus, foulam; humanus, humain; superanus, souveram; villanus, villanus, longitanus, loinlain; fontana, fontaine.

When anus follows i it becomes *in*, whether the i be original, as in antianus, *ancien*; christianus, *chritien*, or whether it comes from the dropping of the medial consonant (see *Historical Grammar*, p. 37), as in paganus, *faien*; decanus, *doyen*; medianus, *moyen*; medianus\*, *muloyen*; civitadanus\*, *cuoyen*.

French derivatives formed by analogy of the above are also very numerous; such are quatre, quatram; dix, dizain; six, sixam; douze, douzaine; neuf, neuvaine; haut, hautain; proche, prochain; Africain, Napolitain, Americain: the one exception under this class is paysan from pays, which should have been paysain, and indeed is found so in the twelfth century and onwards: this one deviation may be due to dissimilation (§ 169). The form on is especially applied to professional words, such as mécanicien, chururgien, musicien, grammairien?

§ 195. Aldus is a late Latin suffix of Germanic origin. In a great many Frankish proper names we may notice a suffix reald, which denotes force, command, answering to the modern German Gerwald, realten, to wield; thus Chlodo-wald, Grimo-wald, Anso-wald, &c. This suffix was transcribed into aldus by the Gallo-Romans; and we find in Merovingian Latin the names Chlodo-aldus, Grimo-aldus, Anso-aldus, Regin-aldus, which in Carolingian times became Grim-aldus, Regin-aldus, by the regular change of oaldus into aldus. By the customary softening of al into au (§ 157), aldus became aud; whence Grimaldus, Grimaud; Reginaldus, Reginal

This suffix is also employed by the French language, and almost always in a depreciatory or a bad sense, whether attached to words of Germanic origin, as *clab-aud*, *crap-aud*, or by analogy in French derivatives, as *leard-aud*, *mg-aud*, *sal-aud*, *fal-aud*; and with a dominutive sense in *lear-aud*, a leveret. *Heraut* is an exception to this depreciatory sense.

§ 196. Ardus is also a suffix of Germanic origin (Gothic hardus, German hart, hard). This suffix, which has helped to form a great many proper names, such as Regin-hart, Rem-hart, Renard; Eberhart, Ebrard, Evrard, denotes intensity in French words;

<sup>1</sup> For letter-changes, see § 54.

<sup>&</sup>lt;sup>2</sup> Faisan, phasianus, is in the same position as faysan; on the principle involved in the law of dissimilation it could not become faisain. Such words as fartisan, capitan, volcan, artisan, courtisan, are not to be added to the list, as they have been introduced in modern times from Spain or Italy, and are not genuine French words.

Waldus (pronounced valdus) became aldus by dropping the medial v (§ 141): as Chlodo(v)aldus, Chlodoaldus, Clodoald.

like aldus, and, it in very many cases takes a bad sense: thus ard is found in combination (1) with substantives; as montagne, montagnard; bit, bátard; cane, canard; bitle, billard; bras, brassard; cuisse, cuisseard; conard, caud-ardus\*; hagard (Lat. haga\*); brancard, from O. Fr. brane, masculine form of branche; monche, monchard; poing, poignard; mont, montarde; poule, poularde; campagne, campagnard; corbeil, corbillard; épine, épined; puils, puisard; or (2) with adjectives, as vieil, viellard; or (3) with verbs, as pend-re, pendard; étend-re, étendard; frur, fuyard; babiller, babillard; baver, bavard; brailler, braillart; brocher, brocart; breuiller, brouillard; civer, criard; nasiller, nasillard; féter, pétard; piller, fillard; flaquer, placard.

§ 197. Aris becomes ier in popular French<sup>1</sup>, as singularis, sanglier; scholaris, écolier.

§ 198. Arius. This suffix, which is derived from aris, and has entirely supplanted it in new-formed French words, becomes ier, as primarius, premier. In popular French this form ier is reduced to er after ch, g³; as in vacher, porcher, boucher, archer, bûcher, clocher, cocher, gaucher, pêcher, plancher, rocher: berger, danger, boulanger,

étranger, léger, verger, oranger, viager, mensonger.

This suffix, ier, is the most productive of all French suffixes: 1st, in adjectives, as primarius, premier; leviarius, léger, whence, by analogy, the French derivatives plenier from plein; bocager from bocage; mensonger from mensonge; dernier, formerly derremer, from O. Fr. derrain, Lat. deretranus\*. 2nd, in substantives which vary exceedingly in sense: thus, ier designates, (1) the names of plants or trees, as poirier, fommier, nover, amandier, laurier, figuier, feuplier, grenadier, prunier, fraisier, múrier, cerisier, citronnier, oranger, églantier, from O. Fr. aighout, a thorn: (2) names of animals, as lévrier, leporarius, bélier, from O. Fr. belle, limier, formerly limier, from hin, (originally liem?) (3) Names of trades, armorier, arme; polier, pot; batelier, from O. Fr. batel; chamelier, from O. Fr. chamel; cordonnier, tormerly cordonamer, from O. Fr. cordonan; hussier, from O. Fr. huis; consiliarius, conseiller; seutarius, écuyer; vervecarius, berger. In bijou-t-ier from bijou; cafe-t-ier from café; clou-t-ier from cleu;

<sup>2</sup> Anus has similarly supplanted the suffix alis, which is, in fact, only

another form of aris, § 176.

<sup>&</sup>lt;sup>1</sup> For letter-changes, see § 54. The learned form is aire; as vulgaris, vulgare; popularis, populaire; by the side of which in learned words of rather greater antiquity we find again the form ier; as regularis, regulier; singularis, singulier.

In this list of suffixes in er we do not name those which follow y or soft ll, because these letters have included in them the i of ier; such are écuyer, noyer, bruyère, gruyer (!), métayer, foyer, voyer; conseiller, cornouller, écaillère, poulailler, oreiller.

borau-d-ier from boyau, the consonant is intercalated to avoid the hatus. (4) The idea of a receptacle: as columbarium, columbur; viridiarium\*, verger; focarium, fover; chartularium, chartrier; granarium, grenier; enerier from enere; sablier from sable.

Hence it is plain that *ir* produces, in each of these cases, such varied changes of sense that it is not easy to give a phrase which shall cover them all. We may read with advantage the reflexions which this great variety of results has suggested to M. Bréal<sup>1</sup>, in a fine

passage full of the philosophy of language. He says:-

'Thus from fomme, figue, amande, we have created fommier, figuir, Judging from these, we might think that -ier indicates that which produces the object named by the primitive word. But, on the other hand, there are words like energer, hudler, herbier, colandier, in which -ier indicates not that which produces, but that which receives. It may be suggested that this idea of reception has led to that of origination, and that the two ideas may be thus merged in one. But then what shall we do with such words as prisonner, where -ir indicates neither the producing agent nor the receptacle, but, on the contrary, the thing contained? Again, if we have prisonner from prison, so have we also geother from geote, which is the exact opposite. Nor is this all: the connection in sense which couples chevalur with cheval is not the same with that which connects bourier with bouf, or lerrier with lièvre. One could easily multiply examples; but these are enough to shew that so variable a suffix requires special consideration.

At would certainly not be impossible to conceive a sense so abstract as to suit all these derivatives, especially if we imagine ourselves re-establishing that neuter gender which the language has lost. But let us consider what passes in our mind when we use these words: each time we supply to ourselves a relation of a concrete kind and of a particular species. The word returier means the coachman of a rothere, while carrossier means the maker of a carrosse; a curravier is a soldier who wears a cuir asse, but an arminum is a man who makes or sells arms. The mind divines or knows by tradition these relations, which are not in the least expressed by the words themselves and their suffix, and our intelligence fills up the blank.

'It is possible that, originally, man tried to give a proper suffix to each relation which his mind could conceive. This attempt he must have abandoned ere long, as the crowd of the relations which his growing experience called up, pressed more and more on him. And thus, too, just as idioms grow older, these auxiliaries of thought, far from increasing in number, as one might have expected, shew a distinct tendency to decrease. The more common suffixes elbow

<sup>&</sup>lt;sup>1</sup> M. Bréal, Idées latentes du langage, p. 10, l. 13--p. 12, l. 24.

out the weaker ones: the mind, content with a certain number of signs, trusts more and more to its own intelligence, helped by tradition.

'We have, no doubt, artificial nomenclatures, in which the termination at once tells us the position held by the object designated in a scientific classification. Thus chemical nomenclature is a kind of spoken catalogue, in which every change in the composition of a body is indicated by a corresponding change in the form of its name. We must remember, however, that, amidst the infinity of relations in which things can stand to one another in the world, the language of chemistry chooses out a few and neglects the rest, thus arriving at exactitude by specialising rigorously. On the contrary, common speech, which ought to suffice for our knowledge in general, very properly dispenses with scientific rigour, and, without striving after impossibilities, compels new ideas to content themselves with existing forms which have been handed down from ages past.'

§ 199. Aster. This suffix retains in French the depreciatory and bad sense it had in the Latin poetaster, philosophaster, and the diminutive sense it had in surdaster, novellaster, &c. Aster became in popular French dire, originally astre; matrasta\*, mardire; patraster, pardire; salmaster\*, saumaitre; noirdire from noir; grisdire from gris; bleudire from bleu; rougedire from rouge; foldire from fol.

§ 200. Atus (of the fourth declension). This suffix becomes  $\ell$  in popular French<sup>1</sup>. As a substantive -atus indicates employment, office, dignity; as in consulatus, senatus, pontificatus, legatus; comitatus, comié; ducatus, duché; clericatus, clergé. By analogy maréchaussée, sénéchaussée, from maréchal, sénéchal.

§ 201. Atus, utus, suffixes which indicate possession, form adjectives drawn straight from substantives (following the analogy of the present participle?), but are not to be confounded with § 200.

Thus the Latins said alatus from ala, barbatus from barba, cornutus from cornu, &c., whence (by the regular changes of atus into  $e^{i2}$ , and of utus into  $u^{3}$ , come the adjectives rosatus,  $rose^{i}$ ; alatus,  $aile^{i}$ ; cornutus, cornu; canutus, chenu; eu, bu, vu, su, formerly eu, beil, veil, seil, from Latin habutus\*, bibutus\*, vidutus\*, saputus\*, as is shewn by the Italian forms avulo, vedulo, &c.; whence also, by analogy, come numerous French derivatives, as  $dge^{i}$  from dge;

<sup>&</sup>lt;sup>1</sup> The learned form is at; as senatus, senat; consulatus, consulat; pontificatus, pontificat. On this model have been constructed such degenerate and ill-formed words as marquisat from marquis, généralat from général.

<sup>For letter-changes, see §§ 187, 188.
For letter-changes, see §§ 187, 188.</sup> 

manière, maniéré; affaire, affairé; orange, orangé; barbe, barbu; ventre, ventru; téle, télu; foint, pointu.

The feminine suffix ata, ée in French (care must be taken not to confuse it with the feminine of the past participle), is joined to substantives with a view to the creation of other substantives which shall express either (1) the quantity contained in the primitive, as charrette, charrettée; assiette, assiettée; gorge, gorgée; cuiller, cuillerée; bouche, bouchée; and, consequently, relations of times: jour, journée; soir, soirée; matin, matinée; an, année; or (2) the object produced by the primitive, as araneata\*, araignée, originally a cobweb spun by the aranea, aragne.

By the side of this suffix ée, which is the old popular and true French form of ata, there is also a form ade imported from the Romance languages of the South — from Provençal, in or about the thirteenth century 2, from Spanish and Italian — Thus, grande, dorade, bigarrade, croisade, ballade, come from Provençal granda (Lat. granata), daurada (Lat. de-aurata\*), crozada (Lat. eruciata\*, from crucem), balada (Lat. ballata\*3). Arcade, balustrade, embuscade, esplanade, estrade, gambade, panade, are from Italian arcata, balustrata, imboscata, splanata, strata, gambata, panata. Camarade, algarade are from Spanish camarada, algarada\*.

This foreign suffix ade has been so largely imported, and at a time when the French language had still a certain plastic force, that it has been adopted as a popular suffix, and is still employed to form a crowd of new words, such as promenade, embrassade, glissade, bourrade, &c.

Atieus becomes age in French; as in viatieum, voyage (O. Fr. viatage); formatieum, fromage; volatieum, volage; umbratieum, ombrage; missatieum, message; silvatieus, saurage.

§ 202. Ela becomes elle in French, as in candela, chandelle: querela, querelle, is pethaps a learned word. This suffix has remained unfruitful, and has produced no new French words.

§ 203. Elis usually becomes el, as erudelis, eruel: it becomes al after a guttural. This suffix has also been barren.

<sup>&</sup>lt;sup>1</sup> The Latin suffix **ata** became Italian *ata*, Spanish and Provençal *ada*; thus diurnata \* is in Italian *giornata*, in Provençal and Spanish *fornada*.

<sup>&</sup>lt;sup>2</sup> The oldest example known to us of the suffix ade in French is noix mugade (nux museata), in the Roman de la Rose.

<sup>&</sup>lt;sup>3</sup> Aubade, bigarrade, are from the modern Provençal aubado, albata; bigarrado.

<sup>&</sup>quot;When one of these foreign words in ade falls in with a popular word coming from the same Latin root, there ensues a doublet; thus the Latin salata becomes salée in French, salada in Spanish: salée and salade, on the entry of the latter word from Spain, form a "doublet." So too with chevauchée, caballicata\*, and cavalcade; panée, panata, and panade, and so on.

§ 204. Ellus becomes first el, then eau, as has been seen in § 157; thus agnellus becomes agnel, then agneau; vascellum, vaisvel, then vaisseau; gemellus, jumel, then jumeau, &c.¹ Cerebellum, cerveau; calamellus, chalumeau; novellus, nouveau; aucellum, oiseau; porcellum, pourceau. This eau becomes iau in fabliau, originally fablicau and fablel from fabulellum\*, and in boyau from bo(t)ellum, by a letter-change studied in § 157².

We have seen, under § 18, how the suffix ellus, a diminutive in Latin, loses in French its diminutive force: in some words, such as vaisseau from vascellum \* (properly 'a little vessel'), it has even

taken an augmentative sense.

- § 205. Emia becomes ange, as has been shewn in § 244, and Historical Grammar, p. 66: vindemia, vendange; laudemia, lonange; and, by analogy, vidange from vider; mélange from méler; lavange from laver.
- § 206. Ensis. This suffix is reduced first to esis, as is shewn § 163, and in this form produces the French is in pays, originally pais, from pa(g)esis\*; marchesis\*, marquis; ois in bourgeois, burgesis is.
- § 207. Enus, ena becomes ain, oin, cin, in, ine, ene; as venenum, venin; plenus, plein; terrenum, terrain; sagena, seine; avona, avoine; ca(t)ena, chaine, O. Fr. chaine.
  - § 208. Eria, becomes ûre; as maneria, manière; materia, manière.
- § 209. Ernum becomes er, as in hibernum, hiver; infernum, enfer; quaternum, eahur. Erna becomes erne: laterna, lanterne; taberna, laverne; eisterna, citerne.
- § 210. Estus becomes *este* in Old French, *éle*<sup>5</sup> in Modern French, as honestus, *honnéle*. This suffix has been barren in French.
- § 211. Etum. Derivatives with this ending denote a district planted with trees. It becomes ay 6, found in such proper names as Castanetum, Chalenay; Roboretum, Rouvray; Alnetum, Aulnoy. It is chiefly through the plural eta that this suffix has developed itself in French, by producing (after the rule of neuter plurals, see § 193 and Hist. Gram. p. 97) feminine substantives in ave 7 saliceta, sauvsave; ulmeta, ormaic; alneta, aunaic. There are many French derivations formed on this model: roscraie from rosier; oseraie from ovier:

<sup>&</sup>lt;sup>1</sup> The primitive form in *el* remains in some few expressions: in the phrase 'se mettre *martel* en tête,' cuphonic feeling has retained the old form instead of the more modern *marteau*.

<sup>&</sup>lt;sup>2</sup> The feminine form ella becomes elle in French: as pastorella \*, pastourelle; seutella, écuelle; vascella \*, vanselle.

<sup>4</sup> For letter-changes, see § 62.

<sup>For letter-changes, see § 58.

For letter-changes, see § 62.</sup> 

châtaigneraie from châtaignier; houssaie from houx, &c. Ronceraie has either been formed from a lost primitive, roncier, or perhaps by analogy.

- § 212. Ieus becomes  $i^1$ : amieus, ami; inimieus, ennemi; formieus \*, fourmi. Iea becomes ie: amiea, amie; urtica, orlie; vesica, vessie.
- § 213. Icom becomes is in perdrix from perdicom (O. Fr. perdris); isse in gémisse, from junicom.
- § 214. Itius, icius becomes is s; as in mixtitius, métis; plexitius, plessis; levaticius\*, levis; colaticius\*, coulis; pasticium\*, fális; and hence the French derivatives, chiquetis from cliqueter; hachis from hacher; abatis from abathe; legis from loger; coloris from colorer.
  - § 215. Ignus becomes in 4: benignus, bénin; malignus, malin.
- § 216. Ilis becomes il: canile, chenil; focile, fusil; focile, fenil; gentilis, gentil; aprilis, arril, &c.

We must take care not to confound ilis with ilis, which is discussed in § 250. Ilis is joined only to substantives or adverbs, as puerilis from puer, gentilis from gens, subtilis from subter; while ilis is combined only with verbs, as agilis from agere, facilis from facere, utilis from uti.

- § 217. Ista becomes iste. This learned suffix, which comes from the Greek with, and was introduced by Christian writers into the Latin language (baptista, evangelista, psalmista), denotes persons by the name of the science which they pursue; as légiste, juriste, journaliste; occuliste from oculus; herboriste from O. Fr. herbor, herbe; dentiste from dent, &c.
- § 218. Ismus becomes isme. This suffix, which comes from the Greek ισμός, is, like ista, purely a learned suffix: syllogismus, syllogisme; barbarismus, barbarisme; soloecismus, solécisme; whence the modern derivatives germanisme, communisme, socialisme, anglicisme, mahométisme.
  - § 219. Iseus becomes ois 5, in Thiois from Thiotiseus, François
  - <sup>1</sup> For letter-changes, see § 129. <sup>2</sup> For letter-changes see § 129.
  - 3 The learned form is ice, as in factice, factitius; adventice, adventicius.
  - 4 For letter-changes, see § 131.
- b For letter-changes, see § 58. The suffix iseus is of Latin origin. We find in Roman writers mariseus, syriseus, libyseus, seutiseum, calathiseus. The Greeks also had this diminutive suffix, στεφανίσκος, αμφορίσκος, &c. But iseus was very rarely used in Latin, and the Romance languages, in employing it so trequently, have been influenced by the Germanic suffix isk (Modern German isch), which often caused a confusion between the two,—a confusion which has been very fruitful in the production of new words. The Wallachian has iseus under the form esc, a fact which proves to us that the origin of it is Latin and not

from Franciscus; and this drops to ais in marais, O. Fr. marois, from mariscus. (Compare frais from friscus \*.)

This suffix becomes esco in Italian, as in tedesco, theotiseus. The Italian language uses it in a great number of new formations; as pilloresco from pillore; grotlesco from grotla; gigantesco from gigante; burlesco from burla; arabesco from arabe; pedantesco from pedante; soldatesca from soldato. In the sixteenth century all these Italian words migrated across the mountains, and produced in France the forms arabesque, burlesque, grotesque, gigantesque, pédantesque, pittoresque, soldatesque, tudesque. The French language has employed this suffix to form new words; thus she says romanesque, chevaleresque (imitating the Italian caballeresco).

§ 220. Inus becomes in: divinus, devin; peregrinus, pèlerin; vicinus, voisin; molinum \*, moulin; eaminus, chemin; delphinus, dauphin; seabinus, chevin; matutinum, matin; mansatinum \*, moilin. Ina becomes inc: pectorina, foitrine; cortina, courtine; cocina \*, cuisine; gallina, géline; radicina, racine; ruptina \*, rouline.

We may here cite, among French derivatives, substantives drawn (1) from verbs—saisine from saisir; gésine from gésir: (2) from other substantives—tétin from tette; crapaudine from crapaud; bécassine from bécasse; bottine from botte; chopine from chope¹: couleuvrine from couleuvre; églantine from O. Fr. aiglant; houssine from houx; serpentine from serpent; terrine from hrre; sourdine from sourd.

- § 221. Inc. A suffix of Germanic origin, denoting filation, origin, which regularly became enc<sup>2</sup> in Old French, whence it is reduced to an in modern French (wrongly written and in some cases): thus Flaeming becomes O. Fr. Flamenc, now Flamand; chamarling becomes O. Fr. chambrelene, chamberlene, now chambellan; Lodaring became Loherenc, then Loherain, lastly Lorrain. This suffix has even been applied to words which are not of Germanic origin; thus from tisser comes O. Fr. tisserenc, later tisseranc, whence tisserand.
- § 222. Issa becomes esse. This suffix in imperial Rome indicated the feminine: abbatissa from abbatem; prophetissa from prophetam; sacerdotissa from sacerdotem. It appears in the French dervivatives abbesse from abbatissa; traîtresse from traître; prophetesse from prophète; vengeresse from vengeur; duchesse from duc; enchanteresse from enchanteur; pécheresse from pécheur; chanoinesse from chanoine.

Germanic, as the separation of the Wallachians from the Empire took place as early as the second century, and therefore long before the Germanic invasion.

<sup>&</sup>lt;sup>1</sup> In these words ine acts as a diminutive suffix.

For letter-changes, see § 72.

- § 223. Ivus becomes if : captivus, chétif; nativus, naïf; restivus \*, rélif. Its French derivatives are plentiful: poussif from pousser; hátif from háter; pensif from penser; craintif from crainte. Iva becomes ive; augiva \*, ogive; captiva, chétive; oliva, olive, &c.
- § 224. Lentus becomes lant in popular French<sup>2</sup>: sanguilentus, sanglant; but lentus, slow, makes lant.
- § 225. Mentum becomes *ment*, as frumentum, *froment*; vestimentum, *vélement*; tormentum, *tourment*, &c. The French language uses this suffix to produce substantives from verbs, by intercalating an e between the verbal root and the suffix: thus we have from *hurl-er*, *hurl-e-ment*; from *commenc-er*, *commenc-e-ment*; from *aboy-er*, *aboi-e-ment*, &c. This e is intercalated only with verbs in  $er^3$ ; with verbs in  $er^4$  er is intercalated, as *sent-i-ment*, *sentir*; ressent-i-ment, ressenter; but it should be noticed that these are learned words; the popular form is certainly that with  $e^5$ .
- § 226. Men. This suffix, which is the root of mentum, under the three forms, a-men, i-men, u-men, has produced a certain number of French words, though it has made no new creations, having been supplanted in this by its derivative mentum, see § 225.

Amen becomes ain, aim: stramen 6, étram; aeramen, airain, levamen, levain; materiamen, merrain; lien for liain, from ligamen; examen, essaim.

Imen becomes in, ain : sain, formerly sain, from sa(g)imen; train, formerly train, from tra(g)imen; nourrain from nutrimen.
 Umen becomes un in alun from alumen \*.

<sup>&</sup>lt;sup>1</sup> For letter-changes, see § 142. In bajulivus \* the O. Fr. bailiff is reduced in Modern French to bailli.

The learned form is ent: violentus, violent; somnolentus, somnolent; &c.

<sup>\*</sup> Except a few words like vêt-e-ment from vêtir; recueill-e-ment from recueillir; consent-e-ment from consentir; tressaill-e-ment from tressaillir.

It may be remarked that these verbs are not inchoative (i.e. they reproduce the Latin forms). As for inchoative verbs (i.e. those which form their imperfect in -issais, not -ais, like rugar), they form substantives in -ment, by inserting the inchoative particle iss: rug-iss-e-ment from rugar; accompl-iss-e-ment from accomplir; abrut-iss-e-ment from abrutir. There are a few exceptions, like bat-i-ment from bâtir; blanch-i-ment from blanchir; assort-i-ment from assortir.

<sup>&</sup>lt;sup>5</sup> Verbs of the fourth conjugation (in re) form substantives by adding e to the verbal root; rend-e-ment, batt-e-ment, entend-e-ment, from rendre, battre, entendre. Bruire, accroître, décroître, connaître, which have ss in the imperfect, bruissais, acroissais, décroissais, connaissais, make bruissement, accroissement, décroissement, connaissement.

<sup>&</sup>lt;sup>6</sup> For letter-changes, see § 54. The learned form is amen, as examen, from examen.

<sup>&</sup>lt;sup>7</sup> The learned form is ime: as crimen, crime; regimen, régime.

<sup>\*</sup> For letter-changes, see § 161. The learned form is ume: as bitumen, bitume; legumen, légume; volumen, volume.

- § 227. Orem, which forms abstract substantives, becomes cur<sup>1</sup>; as dolorem, douleur; duleorem, douceur; eolorem, couleur; sudorem, sucur; pavorem, peur. On this model the French language has formed new words: puanteur from puant; pesanteur from fesant; largeur from large; grandeur from grand, &c.
- § 228. Sorem, torem. These suffixes (not to be confounded with orem), which express the name of the agent, become seur and teur? defensorem, defenseur; piscatorem, pécheur; cantorem, chanteur; pastorem, fasteur; peccatorem, pécheur; salvatorem, sauveur; imperatorem, empereur, &c.

The French derivatives under this head, which are very numerous, follow the same rules of formation as have been studied above in § 225 for -mentum; i. e. non-inchoative verbs form their substantives in cur, as jouer, joueur, while inchoatives form them in iss-cur, as

nourrir, nourrisseur; blanchir, blanchisseur3.

The feminine tricem, as in nutricem, nourries, whence heteur, hetrice; bienfaileur, bienfaelries, has been almost entirely replaced in Modern French by two other feminine suffixes cuse and crosse, thus lavatricem \* from lavator, becomes laveuse; we have picheur from peccatorem, while picherosse is the equivalent of peccatricem.

§ 229. Osus, which forms adjectives from substantives, becomes eu.v.\*, and osa, euse: nodosus, noueu.v.; invidiosus, envieu.v.; amorosus, amoureu.v.; hispidosus, hideu.v.\*.

New forms under this head are very numerous: as chanceux from chance; pierreux from pierre; soigneux from soin; courageux from courage; heureux from O. Fr. heur; affreux from O. Fr. affre; doucereux from douceur 6; orgueilleux from orgueil 7.

- § 230. Tatem, which in Latin produces substantives from adjectives, becomes lé, as in paupertatem, pauveclé; securitatem, súrclé;
- <sup>1</sup> By a change, studied § 79. There is but one exception to this rule; amour, not amour, from amorem. Labour does not fall under this head of exception, as it does not come from laborem (which has duly produced labour), but is the verbal substantive of labourer, see § 18.

<sup>2</sup> For letter-changes, see § 79.

3 The suffix eur was softened later into eur in the words piqueux, piqueur; porteux, porteur; fauckeux, fauckeux; violonneux. violonneur; and into ou in filou, fileur; gabelou, gabeleur; ou for eur is met with in some patois (?).

4 For letter-changes, see § 149. The learned form is ose: as morosus,

morose; ventosus, ventôse; sinosus, sinôse.

Tolosa, are exceptions. But pelouse, ventouse, and Toulouse from Provençal.

<sup>6</sup> Doucereux is a softened form of douceureux.

<sup>7</sup> Pieux and sérieux have no place here, as they come from the Italian pietose, seriose.

civitatom, cilé; sanitatem, sanlé; bonitatem, bonlé; feritatem, fierlé; bellitatem, beaulé; caritatem, cherlé; legalitatem, hyaulé; nativitatem, naïvelé; regalitatem, royaulé. Similarly atem becomes é, as abbatem, abbé: and ata, ée, as applicata, appliquée. Tempéle is not an exception, as it comes not from tempestatem but from tempesta\*.

The i, which in the Latin connects the root with the suffix (as bon-i tatem, from bonus, san-i-tatem from sanus), and which disappears in French from all words derived directly from the Latin (as bonté, santé), reappears as e in derivatives formed from French words at first hand with no corresponding Latin words: thus from gai comes gai-e-té; from souverain, souverain-e-té; from sal, léger, ancien, net, sal-e-té, légèr-e-té, ancienn-e-té, nett-e-té.

§ 231. Onem. Substantives derived by help of this suffix in Latin are of many kinds of meaning: thus they designate animals, as falco, pavo, leo, capo; persons, as latro; things, as carbo, pulmo, sapo. It becomes on in French: as falconem, faucon; pavonem, paon; leonem, lion; caponem, chapon; latronem, larron; carbonem, charbon; pulmonem, poumon; saponem, savon. The French language uses this suffix to reinforce such Latin primitives as had not enough strength to stand by themselves: thus from mentum, talus, piscis, ren, ericius, glutus, it formed mentonem\*, talonem\*, piscionem\*, renionem\*, ericionem\*, glutonem, whence menton, talon, poisson, rognon, hérisson, glouton. By analogy have come such words as jambon from jambe; cochon from coche; pieton from pied; fripon from friper; soullon from souller; juron from jurer; plongeon from plonger; bouchon from boucher; perron from pierre; charron from char; aviron from virer; ceinturon from ceinture; chaudron. formerly chauderon, from chaudière (?) or chaud, compare laidron; chevron from chèvre; clairon from clair; fleuron from fleur; tendron from tendre. In the words buch-er-on from buche; chap-er-on from chape; forg-er-on from forge; laid-er-on from laid; mouch-er-on from mouche; mouss-er-on from mousse; puc-er-on from puce; quart-er-on from quart; vign-er-on from vigne2, the suffix is strengthened by an intercalated  $\epsilon r$ .

The French language similarly employs on in the formation of diminutives: as aiglon from aigle; chaton from chat; lerron from lièere; raton from rat; cruchon from cruche; sablon from sable.

This diminutive particle is often strengthened by the insertion of (1) ill, whence carp-ill-on from carpe; barb-ill-on from barbe; col-ill-on from coth; crois-ill-on from croix; moin-ill-on from moine; négr-ill-on from nègre; post-ill-on from poste; tat-ill-on from tâter;

<sup>2</sup> In imitation of this suffix in eron, the learned have constructed from the Latin bibere the barbarous word biberen.

<sup>1</sup> Méchanceté comes not from méchant, but from O. Fr. méchance (derived from méchant, like jouissance from jouissant, or puissance from fussant).

écouv-ill-on, from O. Fr. écouve; grap-ill-on from grape 1: or (2) iche, whence barb-ich-on, corn-ich on, fot-ich-on, from the primitives barbe, corne, fol.

We may add to this list substantives in ionem, such as macionem \*, majon; unionem, oignon; suspicionem, soupgon, &c. By analogy there have been formed from Latin substantives the following words: campionem \*, champion, from campus; arcionem \*, arçon, from arcus; caprionem \*, chevron, from capra; limacionem \*, hmajon, from limax; companionem \*, compagnon, from com-panis; aucionem \*, oison, from auca 2; scutionem \*, écusson, from scutum; truncionem \*, troncon, from truncus; hence also comes lampion from lampe.

§ 232. Tionem, sionem. This suffix must not be confounded with § 231; it is joined to the supine to form abstract substantives denoting the action expressed by the verb: thus from press-um, sta-t-um, comparat-um, mess-um, supines of premere, stare, comparare, metere, came press-io (the act of pre-sing); stat-io (the act of standing still); comparat-io (the act of comparing); mess-io (the act of reaping)<sup>3</sup>.

These suffixes become (1) con as factionem, façon; lectionem, leçon; punctionem, poinçon; redemptionem, rançon; suctionem, suçon: (2) sson as bibitionem becasson; messionem, moisson; coctionem, cuisson; seutionem, écusson; frictionem, frisson; nutritionem, nourrisson; cretionem cresson: (3) son, with hard s, as cantionem, chanson: (4) son, with soft s, as potionem, foison;

¹ Take care not to confound with these derivatives in illon such words as vermill-on, aiguill-on, corbill-on, guenill-on, tortill-on, tourill-on, échantill-on, goupill-on, ossill-on, which come from the primitives vermeil, aiguille, corbeille, guenille, tortille, tourelle, O. Fr. échantil, goupil, oisel, by simple addition of the suffix on.

<sup>&</sup>lt;sup>2</sup> Oison does not come from oie, for it would have been oyon, not oison. Compare joyeux from joie.

<sup>&</sup>lt;sup>3</sup> A certain number of these substantives had taken a concrete signification even in the Latin: thus potio passed from its first sense of 'the act of drinking' to that of 'the thing drunk,' a potion, draught; mansio, first 'the act of remaining,' became 'a place of continuance,' habitation, mansion; ligatio, 'the act of binding,' became a ligature, a bond. In imitation of the Latin, the French language also gave to many of these substantives a concrete sense: tonsionem, cantionem, venationem, prehensionem, clausionem\*, bibitionem\*, sationem, originally 'the act of clipping,' &c., became toison, chanson, venaison, prison, cloison, boisson, saison. In this case the concrete substantive is often masculine, whereas the abstract was feminine; as in potionem, posion; nutritionem, nour-risson; cretionem\*, cresson; punctionem, poincon; suctionem, suçon. Similarly élève, the concrete result of the act of education, is masculine in its concrete sense.

<sup>&</sup>lt;sup>4</sup> The learned form is tion for tionem; potionem. potion; factionem, faction: and sion for sionem; pressionem, pression; illusionem, illusionem, illusionem.

rationem, raison; titionem, lison; traditionem, lrahison; carricationem\*, cargaison; fusionem, fusion; ligationem, liaison; liberationem, livraison; venationem, venationem.

Numerous French substantives have been formed analogously, either from verbs in ir, as guérison from guérir; garnison from garnir; or from verbs in er, as démangeaison from démanger; échaussan from échausser; fauchaison from faucher; slottaison from flotter; or from verbs in re, as pendaison from pendre.

§ 233. Torius, sorius. Substantives in tor, sor (see § 33), denoting the name of the agent, have produced Latin adjectives in torius, sorius, which indicate a quality proper to the action accomplished by the agent; as oratorius from orator; laudatorius from laudator.

The neuter of these adjectives was early employed as a substantive, and usually denoted the place of residence of the agent, or the instrument that he uses; as praetorium from praetor; dormitorium from dormitor; auditorium, dolatorium. These newer words, already frequent under the Empire, became exceedingly numerous at a later time, especially in ecclesiastical and scholastic Latin, as purgatorium, refectorium, laboratorium, observatorium, &c This suffix becomes our : dormitorium, dortour; pressorium. pressoir; dolatoria \*, dolore; seriptoria \*, écritoire.

There are many French derivatives, masculine and feminine; as farlour from parlor; arrosour from arrosor; comptour from compter: trottour from trotter; tirour from there; rasoir from raser; battour from battre; abattoir from abattre; éteignour from éteindre; balançoure from balancer; máchoure from mácher; écumoure from écumer; nageoure from nager; mangeoure from manger<sup>3</sup>.

- § 234. Tudinem. This suffix, which was reduced to tuma in common Latin, in which we find costuma for consuctudinem, becomes tume 4; as consuctudinem, coutume; amaritudinem, ameriume.
- § 235. Quin. This suffix, which usually gives a bad sense, is of Germanic origin, from the Old Netherland kin<sup>5</sup>; as bouquin from bocckin; mannequin from mannekin; brodequin from brosekin. Hence also casaguin from casague<sup>6</sup>. This suffix, which is almost barren in

<sup>1</sup> On this model the bad form dinatoire has been formed from diner.

<sup>&</sup>lt;sup>2</sup> For letter-changes, see § 84.

<sup>&</sup>lt;sup>8</sup> Derivatives of inchoative verbs insert the particle iss, as rotissoire from rotir; polissoir from polir.

<sup>4</sup> The learned form is ude; as aptitudo\*, aptitude; mansuetudo, mansuétude; whence the modern forms platitude from plat, &c.

<sup>&</sup>lt;sup>5</sup> This suffix kin answers to the German diminutive chen.

<sup>&</sup>lt;sup>6</sup> We must not add to these words arlequin, faquin, baldaquin, pasquin, for they come from the Italian; nor mesquin, which is Spanish; nor palanquin, sequin, Oriental words; nor requin, of which the origin is unknown.

French, has been more largely developed in the Picard patois, which uses it for new forms, such as rerquin, a shabby little glass (rerre); painequin, a bad little loaf (pain); Purrequin, poor little Purre, &c.

- § 236. Tura, sura. This suffix denotes the result of the action indicated by the vetb, just as tor, sor (see § 233) denotes the name of the agent. It becomes ture, ure, as in mensura, mesure; pietura, pienture; mansura, masure; ruptura, rolure; capillatura, cherelure, formerly cheveleure; armatura, armure, formerly armeure, &c. On this model have been formed many substantives, drawn originally from verbs; as aller, allure; parer, parure; bouter, bouture; serrer, serrure; blesser, blessure; failre, pálure¹; then, by analogy, from adjectives; as, vert, verdure; confit, confiture; froid, froidure; ordure from O. Fr. ord: and from substantives; as voile, voilure; col, encolure².
- § 237. Ucus, uca become u and  $uc^3$ : as festucus\*,  $felu^4$ ; lactuca, lattuc; verruca, verruc; carruca, charruc; maxuca\*, massuc; tortuca\*, lortuc.
- § 238. Undus becomes ond; as rond, formerly roond, from ro-(t)undus<sup>5</sup>.
  - § 239. Unus becomes un; as jeun, formerly j.iin, from je(j)unus.
- § 240. Urnus becomes our 6; as diurnus, jour; alburnum, aubour.

## CHAPTER II.

## ATONIC SUFFIXES.

§ 241. 'All these suffixes disappear in the French, and are consequently useless for the purpose of producing new derivatives; they have however recovered their place from the time that men utterly lost sight of the genius of the language, and became ignorant of the rule of accent?' Thus people began to use such words as partique,

<sup>2</sup> Bravoure does not come from brave, for then its form would have been bravure, but is drawn directly from the Italian bravura,

<sup>1</sup> As we have seen, § 225, note 4, substantives formed from inchoative verbs intercalate the particle iss: as bouffer, bouff-iss-ure; moisir, mois-iss-ure; brunir, brun-iss-ure; meurtrir, meurtr-iss-ure; flétrir, flétr-iss-ure.

<sup>&</sup>lt;sup>3</sup> The learned form is uc; as caduc from caducus.

<sup>&</sup>lt;sup>4</sup> From sa(b)ueus\* has come the O. Fr. saii, whence the derivative saiereau (compare poètereau from poete), now contracted to sureau.

<sup>&</sup>lt;sup>5</sup> The learned form is also ond; as vagabond from vagabundus.
<sup>6</sup> For the changes of urnus into our, see § 97. The learned form is urne; as diurnus, diurne; nocturnus, nocturne.

<sup>7</sup> G. Paris, Accent latin, p. 92.

fragíle, rigíde, instead of porche, fiéle, roide, from porticus, frágilis, rigidus.

In considering these Latin atonic suffixes we are bound strictly to reject every word that has been introduced into the French language since the period of its natural formation.

- § 242. Eus, ius, Fr. ge, che. Extraneus, étrange; laneus, lange; diluvium, déluge; lineus, linge; propius, froche; sapius, sage; simius, singe; hordeum, orge; rubeus, rouge; alvea, auge; somnium, songe; Leodium, Liége; Malbodium, Maulenge; cereus, cierge!. For the change of eus, ius into ge, che, see Historical Grammar, p. 66.
- § 243. Ea, Fr. ge. gnc. Cavea, cage; granea, grange; vinea, rigne; linea, ligne; tinea, ligne. For the change of ea into ge, see Historical Granmar, p. 66.
- § 244. Ia, Fr. ge, che, ce; or it disappears altogether. Vindemia, vendange; angustia, angusse; ciconia, cigogne; tibia, lige; sepia, sèche; salvia, sauge; invidia, envie; gratia, gráce; Burgundia, Bourgogne; Francia, France; Graecia, Grèce; Britannia, Brelagne<sup>2</sup>. For the change of ia into ge, see Historical Grammar, p. 65.
- § 245. It-ia, Fr. esse. Justitia justesse; mollitia, mollesse; pigritia, faresse; tristitia, tristesse. French derivatives: wresse, politesse, tembresse.
- § 246. Icem (from ex, ix), represented in French by ce, se, ge. Herpicem, herse; pulicem, fuce; judicem, juge; pollicem, fonce; pumicem, fonce; corticem, cource<sup>3</sup>.
- § 247. Ieus, a, um, Fr. che, ge. Porticus, forche; manica, manche; serica, serge; dominica, dimanche; Santonica, Saintonge; fabrica, forge (O. Fr. faurge); pertica, ferche; pedica, füège 4.
- § 248. Atieus, Fr. age, is a suffix formed with icus 5. See § 201

  Hence come French derivatives: mesurage, labourage, alliage, arrosage, &c. It has been said that these words come from a Low Latin suffix in -agium (as missage from messagium, homage from

1 Learned form é, as igné, igneus.

<sup>2</sup> Learned form ie, as chimie, philosophie, symphonie, Australie. But we must not confound this termination with the proper French derivatives in ie, as felonie (felon), tromperie (tromper), &c., which are popular and very numerous.

3 Learned form ice: calicem, calice.

+ Learned form ique: porticus, portique; fabrica. fabrique; viaticum, viatique.

<sup>5</sup> As we have seen § 225, note 4, substantives formed from inchoative verbs intercalate iss; as atterrir, atterrissage.

homagium). But though messagium certainly exists, it is far from being the parent of the Fr. message; on the contrary, it is nothing but the Fr. message latinised by the clergy, at a time when no one knew either the origin of the word (missaticum) or the nature of the suffix which formed it.

§ 249. Idus disappears in French. Pallidus, fåle; nitidus, net; calidus (Low Lat. caldus), chaud; tepidus, tiède; rigidus, roide; sapidus, sade; whence male sapidus, maussade<sup>1</sup>.

§ 250. Ilis, Fr. le. Humilis, humble; flebilis, faible (O. Fr. fleible); ductilis, double; mobilis, meuble; fragilis, frèle; gracilis, grêle<sup>2</sup>.

§ 251. Inus disappears in French. Pagina, page; galbinus, jaune; femina, femme; fraxinus, fréne; domina, dame; carpinus, charme; cophinus, coffre<sup>3</sup>.

§ 252. Itus, Fr. le. Vendita, vente; reddita, rente; debita, dette; perdita, perte; quaesita, quéte.

§ 253. Olus, Fr. le. Diabolus, diable; apostolus, apôtre (O. Fr. apostle).

The compound suffixes iolus, eolus, dissyllabic (iö, eö) in Latin, had their penultimate lengthened in the seventh century, iō, eō, thenceforwards accented iolus, eólus, whence came the French terminations uul, euil, iol: thus filiolus, filleul: capreolus, chevreul; linteolum, linceul; gladiolus, glaïeu; luseiniolus, rossignol; aviolus, aieul.

§ 254. Ulus. Fr. le. Tabula, table; fabula, fable; ambula, amble; populus, feuțle; ebulum, hièble; situla, seille; eingulum, sangle; ungula, ongle; capitulum, chapitre; merula, merle; spinula, épingle; insubulum, ensouple.

The following suffixes are formed from ulus: -

§ 255. I. Aculus, Fr. ail. Gubernaculum, gouvernail; tenaculum, tenaulle; suspiraculum, soupirail. French derivatives: travail, fermail, éventul, &c.

§ 256. 2. Eculus, Fr. il. Vulpecula, goupil; in Old French this word meant a fox, and survives still in the diminutive goupillon, a sprinkler, originally made of a fox's tail.

§ 257. 3. Iculus, Fr. eil. Icula, Fr. eille. Apicula, abeille; articulum, orteil (O. Fr. arteil); somniculus\*, sommeil; soliculus\*,

3 Learned form ine: machina, machine; &c.

<sup>1</sup> Learned form ide: rigidus, rigide; sapidus, sapide; aridus, aride; &c.

<sup>&</sup>lt;sup>2</sup> Learned form ile: mobilis, mobile; ductilis, ductile; fragilis, fragile; &c.

<sup>&</sup>lt;sup>4</sup> Learned form ule: cellula, cellule; calculus, calcul; funambulus, funambule.

soleil; auricula, oreille; cornicula, corneille; ovicula, ouaille; vermiculus, vermeil; acicula, aiguille.

§ 258. 4. Uculus, Fr. ouil. Ucula, Fr. ouille. Feniculum, fenoual; ranucula, grenouille; veruculum, verrou (O. Fr. verrouil, surviving in verrouiller); genuculum, genou (O. Fr. genoual, surviving in agenoualler).

Vowels which follow the tonic syllable disappear in French; consequently the learned forms of atonic suffixes, such as fragile, mobile, &c., from fragilis, mobilis, &c., are incorrect, seeing that they all retain the vowel after the tonic syllable, and in fact displace the Latin accent. One may indeed lay it down as a general rule that, in the case of Latin atonic suffixes, all French words of learned origin break the law of Latin accentuation.

#### SECTION IV.

#### VERBAL SUFFIXES.

#### CHAPTER I.

## ACCENTED.

- § 259. Asco, Fr. ais; esco, Fr. ois; isco, Fr. is. Nasco, nais; pasco, pais; paresco, parais; eresco, crois; &c.
- § 260. Ascere, Fr. aitre, O. Fr. aistre. Nascere, naître; pascere. patre.
  - § 261. Ico, igo, Fr. ie. Ligo, lie; castigo, chálie; nego, nie; &c.
  - § 262. Illo, Fr. èle. Chancèle, grommèle, harcèle, &c.
- § 263. Are, Fr. er. Pensare, peser; cantare, chanter; &c. Ere, Fr. oir. Movere, mouvoir; habere, avoir; &c.
- § 264. Tiare, Fr. cer, ser. These are forms peculiar to the common Latin: tractiare, tracer; suctiare, sucer; captiare, chasser.

#### CHAPTER II.

#### ATONIC SUFFIXES.

§ 265. Ico, Fr. che, ge. Judico, juge; mastico, máche; vendico, venge; rúmigo, ronge; carrico, charge, &c. The learned form is ique: revendiço, revendique; mastico, mastique.

<sup>&</sup>lt;sup>1</sup> We have seen, *Historical Grammar*, p. 119, that all deponent verbs become active in form in the Low Latin.

- § 266. Ere, Fr. re. Surgere, sourdre; molere, moudre; torquere, tordre; ardere, ardre (this Old French verb, which signified to burn,' remains in the participle ardent, and substantive ardeur). In many of these verbs the accent has been displaced in late Latin.
  - § 267. Io disappears in French. Despolio, dépouille.
- § 268. Ulo, Fr. le. Modulo, moule; cumulo, comble; tromulo, tremble; turbulo, trouble.

Under ulo we may put:—

- § 269. 1. Aculo, Fr. aille, as in tiraille, criaille, &c.
- § 270. 2. Ieulo, Fr. ille. Fodiculo, fouille; sautille, tortille, &c.
- § 271. 3. Uculo, Fr. ouille. Chatouille, bredouille, barbouille.

#### SECTION V.

#### DIMINUTIVE SUFFIELDS.

These are sixteen in number.

- § 272. Aceus, Fr. ace, asse. Grimace (grim r), populace, paperasse, &c.
- § 273. Icous, Fr. 1880, iche. Coulisse (couler), pelisse (peau), caniche.
- § 274. Oceus, Fr. oche. Epinoche, pioche.
- § 275. Uceus, Fr. wehe. Peluche, guenwehe.
- § 276. Aculus. See above, § 255.
- § 277. Aldus. See above, § 195.
- § 278. Alia, Fr. ad, adle Bestialia, bétad; mirabilia, marreide; portalia, fortall; canadle, muradle, &c. Ilia, Fr. dle. Filia, pl/e; tilia, hlle.
  - § 279. Ardus. See above, §§ 175, 196.
  - § 280. Aster, Fr. alre. See above, \$\$ 178, 199.
- § 281. At, et, ot. (1) At: aiglat, lowest, verrat. (2) Et, ette: sachet (sac), cochet (coq), mollet (mol), massonnette, alouette. (3) Ot. otte: billot (bille), cachet (cache), brulot (brûle), ilot (ile), &c.
- § 282. Ellus, illus, Fr. eau, el, elle. Agnellus, agneau; gemellus, juneau; annellus, anneau; seutella, écuelle; vascellus, vaisseau; avicellus, viscau.
  - § 283. Onem, ionem. See above, § 231.
  - § 284. Ulus. See above, § 254.

= signifies 'having become,' as e = a, signifies 'e having become a.'

In constructing a geological map, we distinguish the strata which, lying one above another, form, as it were, the history of the earth, by marking them out with different shades or colours; similarly, in distinguishing the two great layers of the French language, we shall mark them off from one another by employing two different kinds of type. Thus, the older or popular stratum, anterior to the Eleventh Contony, which forms the mean part and foundation of the language, will in this Inctionary be directed by Rom in capital letters, as ABBAYE; and the newer or non-forular stratum, the work of the learned, which comprises all words borrowed since the time of the natural formation of the language from the classical languages or from foreign modern tongues, will be denoted by thick Roman type, as Aberration; and lastly, the words borrowed directly from modern tongues well be distinguished from those taken from the classical languages by being frinted in thick type, spaced, with \(\frac{1}{2}\) prigrad, as \(\frac{1}{2}\) So, are those of the Introduction, which the student is advised to consult.

A, frep to; It, a and ad, from L, ad, which took successively in barbarous leath the three meanings (\*\* avec, with, \*\* foor, tor, \*\* à, to) which have descended to the Fr à. Thus, ad \*\* avec is found in the Lex Sider (6th cent) ed. Pardessus p 121 \*\* Si quis minim vasum ad apis finaverat, solidos xiv culpido is indirectur. In a less popularly worded copy of the same law we find \*\*Si quis minim vas cum apilors," e.e., proving that ad wis used as = cum. Hence comes the use of à \*\* avec in such phrases as chandelier à branche, field à agradle.

This preposition plays an important part in the inflexion of the lineuage, and in the formation of worls. In inflexion, ad with the accus takes the place of the Latin dative. This characteristic which is found in germ in classed Latinity (as in 'quod apparet ad agricolas,' Terence; 'Lime ad cam ficem dabo,' Pautus, 'pauperem ad ditem dari,' Terence), and also in several other languages (as in modern Greek, which uses the across with eis ad for the lost dative, and as in the Fuglish n e of to), is developed very strongly in Merovingian Latin. Passing on from this point this ad forms the dative in all the Romance languages - Joined with the definite article it becomes in modern French au (ad illo) aux (ad illis), q v. Thus, for example, m a Diploma of a p. 693 (Briquigny, n. 431), we have 'Sed venions ad co-placito'; and m a Doration of A.D. 713 (id. n. 437), 'Ergo don ivi ad monasterium'; in a Donation of AD 671 (id. ii, 151), 'Idenco dono ad sacrosanctum monasterium'; in Markulf App 58, 'Miln contigit quod ego . . . caballum ad hommem aliquem in firito subdivi'; in the Formulie Andegay, 28, 'Nam terra ad illo homme minquam fossadasset."

Ad becomes à by dropping d, a process which had already taken place before con-

squants in Merovingian Latin; thus, in the 8th cent, we find in Markult, Formul 1, 37, "a quo placifo veneus"; a passage found in mother part of Marlulius (Appendix 38) in the form "ad quod placement," A Domition of AD 739 has 'In portione in quain a liberto nostro ("and libertum nostrom) dedams," Brequigay, ii 379.

This preposition enters into the composition of words as a prefix, as in the nouns a-then at-faire etc., in id cetives as a-troit, avenigh; in verbs, as a-moner, a-dos er, a-longer, in adverbs, as as sez, an fararout.

ABAISSER, va. to derse. Sp. abaxar, It abbassars from L adbassars compd of ad and bassars, etc., from bassus, see last Adbassars, by db - bb (§ 168) and bb - b, becomes abassars: "Molendina, quie sint inflat los inicavitatis, abassentur medicate inicia bia chiciatonis" (Chiracter of a to 1102. Miraton, Ant. R. v. 87). Abassars becomes abassar by arc. or (§ 263), a. at (§ 54, 2), and by continuance of b, ss. ind in tal. a.—Dei. abassarient (§ 225), abaisser (§ 228) tabasser (Hist. Grain, p. 179).

ABANDON, on abundonment, giving up, unconstraint. In 13th cent in the form  $\hat{a}$ bandon in Marie de Frince, 1 488, whence it appears that the word is formed by a comparatively modern function of the presà with O Er subst. bandon permission, liberty, authorsation, a word found as late as the 16th cent in R. Estienne's Dict. Fr -Latin (AD 1549): BANDON, indulgentia, licentia. Permettre et donner bandon à auleun, indulgere -M the sa forest à bandon was a feudal lew phrase in the 13th cent. mettre sa forêt à formesston, i. e to open it freely to any one for pasture or to cut wood in , hence the later sense of giving up one's rights for a

time, letting go, leaving, abandoning. For this change of sense see § 12 The words à bandon were joined as early as the 13th cent, the form abandon appearing in Beau-

manen, 43, 13.

The O. Fr bandon, like all terms of feudal custom, is of Gerni origin, derived through fendal L bandums, an order, decree: 'True nos demum secundum canonicam auctoritatem fernla excommunicationis et bandi nostu construiximus pracabatum Ermengandum countem, says an Excommunication of Gregory V, A D 998 (Concil.) Rom, Bilaze, i. 6). Bandum represents Scand band (cp Germ banaen), an order, decree .- Der abandonner, abandonnement

Abaque, on, an abicus; from L abacus. ABASOURDIR, va. to stnn, deafen; an illtormed and corrupt form (\$ 177), of a type abassourdir, compd. of ab and assourdir. See sourd

ABAT (or ABAS), sm. a heavy rain, used in the phrase une plute d'abat. From à and

ABATARDIR, va. to abase, compt; from à and batard; see batard -Der. abatardissement (\$ 225).

ABATIS, sm a demolition, felling (of trees) In the 12th cent, abaters in the Chanson d'Antioche 6, 93, from L. abbatere base abattre) through a deny, abbatients; For abbat abat see abattre; for -icium = -cis = -is see § 214

ABAT-JOUR, sm. a tumk-light, reflector, Impshade. See abattre and jour.

ABATTRE, va. to beat down, knock down; from L abbattere?, found in 6th cent in the Gamaine Laws: 'Si quis hom nem! de furca abbattere presumpsent' (Lex Sal Nov 273). Abbattere is compd of i ab and battere (see battre). Abbattere. Abduction, of an anatomical term somifyby bb - b and tt - t (by law of least action, §§ 166, 168), becomes abatere, contid. (§ 51) to abat're, whence O. Fr. abatre (in 11th cent, in the Chaison de Roland, 267), wrongly atterwards written abbative Abecedaire, sm. a spelling-book; from L. by the Latinists of the Renaissance (1604, in Nicot's Dict.), in order to make the word look more like its Latin parent. In the 17th cent, the older and correct orthography was resumed in the words aba'age and abatis; and partially in abattre, which ! dropped the second b; it still unfortunately kept the tt - Der, abatis (q. v.), abatage (\$ 218).

ABBAYE, f an abbey: Prov and Sp. abadia; It. abbadia; from L abbatiam\* (m St. Icrome). Abbatia, by bb = b, and t = d(§ 117), carly became abadra "Ha abadia de Rubiaco una medictas remanent." says a will of A.D. 961 (Vaissette, B. p. 108). Aba d'iam becomes abere (11th cent, 1 ors de Gullanne le Conquérant, 1) by dropping d, which represents t (§ 117), by n e (\$ 54, 3), and by persistence of initial a (§ 54, 1), and of 1 (§ 69), and by final am e (\$ 51, 2). Above is written in 13th cent. abaie, in 16th cent. abbave

ABBE sm, an abbot, he id of a religious house: from L. abbatem ', a word introduced in the list ares of the Roman Impire by Christian writers, who had borrowed it from the Syriac abba, a fither. For change of sense see § 12 Abbatem becomes abi (11th cent., Chanson de Rolind, 200) by bb = b (\$\xi\$ 160, 168), atem = e (\xi 230), and continuance of until a (\$ 54.1). For later change of about abbe see abattre.

ABBESSE, st. in abbess. It, abbadessa, from L abbatissa , a deriv in -188a (§ 222) from abbatem, see abbi; found in an cptaph, Ap. 509 (Muriton, A 429, 3); "Hic requescit ri sormo pincis lustina abbatissa.' Abbā t'issa, by dioppae t (§ 117), and by bb b (\$\frac{1}{2}\$ 166, 168). a -e (5 54, 3), 1880 - ever (\$ 222), and continuance of initial a, becomes O 11. abresse (13th cent, Roman de la Rose, 8800), whence, later, above For the change from aliesse to abbesse see abjetre

Abeès sm. an abscess; from L. abscessus Abdication, f. abdication; from L. abdicationem.

Abdiquer, va. to abdicate; from L. abdictre.

Abdomen, sm, the abdomen, stomach; from L abdomen

mg the divergence of the parts of the body from the mean line which is supposed to pass vertically through the body, from L. abductionem.

abecedirinm. For armm = aire (as if it were aris) see § 197 note 1.

Abecquer, va. to feed with the beak, to tee 1, from à and bec, q. v.

**A**bée, f a null-shace; from  $\hat{a}$  and  $b\hat{c}e$ , q,  $\mathbf{v}$ . + Abeille, of a bee; a word introd. towards the 15th cent.: found in 1460 in a letter of remission quoted by Ducange; from Prov. abelha, which from L. apicula, Phn. N. H. 2, 21, 21: properly a little bee (for enlargement of meaning see § 13). Just as we

early find abis for apis ('de furtis abium,' Lex Salier, ed. Pardessis, p. 1633, so apicula m Meiov. Lit. becomes abjenta. whence Prov. abelha, just as auricula. ovicula, corbicula, became Prov. aurelha, ovelha, corhelha - That abeille is not a true Fr. word derived directly from Lat is shown by the fact that in Ir. the Lit p never stops at b, but always descends to v (8 III and note 2), while in Prov it a'ways stops at b; consequently if apicula abicula, had directly produced a Fr word, it would have taken the form av ille, by p v (§ 111), reula edic (§ 257), and by the continuance of unitial a. This true by form is not unaginary; it is to be found in the Dict. of R. Estenne (1519): Avenue, mousch à med, met diqual on u e en l'onraine et en Anjon. This ferm, which thus even in 1549, was restricted to one or two western provinces, entirely deappeared? when apicusture was localised in Languelic, and Proveree, and was replaced, as was to be expected, by a form brought from the district in which the production of honey and care of bees was cline. attended to

Aberration, stabeliation, properly cistars, L aberrationem.

ABFTIR, va. to bruta'ise. See lê'e and Hist. Gram p. 177.

Abhorrer, va. to abhor, detet; from L. abhorrere.

ABÎME, sm. an abyss. ACARIÂTRE, adj. crabbed, cross-gramed. The Lat. caras, a face, then a head (see chère), produced a verb adcariare \*, accarare, whence O. Fr. acarier, whence the deriv. acurastre (§ 100), found in R. Estienne's Dict, a p. 1549, in sense of insanus, mente ciptus, then acariaire (\$ 199). From its sense of foolish, mad, in 1604, Nicot's Diet., it has come to its modern sense, Diet, of the Academy, 1604 ACCABLER, 2st to overwhelm, The Gr καταβολή, in sense of an overthrow, passing from the abstract to the concrete sense of a machine wherewith to overthrow (a fiequent change of sense; see § 12, and cp. Fr point on, from L. punctionem), produced late Lat cadabulum, a balista. through the Consaders, as did several other terms of medieval muitary art: 'Tribus lapidibus magna petrana, quae cadabula vocabatur, emissis, says (A. 1219) Witham the Breton, De Gestis Philippi Augusti. Cadáb(ŭ la, dropping ŭ regularly (§ 51) became O Fr cadable (11th cent. Chanson de Roland, strophe vm ): Cordres a prise e les murs pecciez, Od ses cadables les turs en abatted (and his catapults beat down the towers thereof). Next ca(d)able, by dropping medial d (§ 120), becomes caable, found in another passage of the same poem, strophe xvi.: Od vos caables avez fruset ses puirs (and your catapults have broken its walls) From this proper sense of a machine of war to crush one's foe by throwing great stones to overthrow him, caable comes to have the more general sense of the act of overthrowing (§ 12). An old Custom-book of Normandy cited by Ducange (s. v) has 'De prostratione ad terram, quod cadabulum dicitur, xxin solidos,' rendered in the Fr. version (12th cent.) by De abatre à terre, que l'on afele caable. Caable, later coutr. to cable, gave the deriv. accabler, signifying to be crushed under some heavy mass: Accabler, estre accablé de quelque chose qui chet sur nous, Accident, sm. an accident; from L. acciou estre escaché, obrui (1549), R. Estienic's Dict. In 1604 Nicot's Dict. also gives this Accidentel, adj. accidental; from L. acciterm in the active sense: Accabier, c'est affouler auleun de coups pesans, l'atterrer à force de pesanteur, et de charger sur lm; opprimere aliquem, obiuere Finally, the word loses all but its figurative sense, and is found in its modern

signification alone in Richelet's Dict. (1681). -- Der, accablement (§ 225).

Accaparer, va to buy up, to monopolise; a word first found in 1762 in the Dict. de l'Acadénne, having come in through the commetce of Genoa and Leghorn with Marsolles, from It, cafarrare, to take up merchandise. Accaparer, which ought to have been capairer, has got an unital a from the It accupare, to choose, take, the meaning of which is so similar to that of cararrare, that it naturally produced a compision between the two words. Very m my modern bi, words of trade and commerce are of It. origin (is banepic, bilan, agio, etc., sec § 25)-Der accafarement (\$ 225), accapareur (\$ 227).

1 pth

The history of this word is an example of those restrictions of meaning mentioned in the Introduction (§ 12). In the 12th cent accoucher meant, according to its etymology, to he down in bed. Mathieu de Montmorency, says Villehardoum, accouch a malade (lay down ill), et tant fut agrevé

qu'il mourut. Joinville, when ill, uses the JACCROCHER, va. to hook up, tear with a following expression, Et four les dites maladies j'acconchai au lit malade, en la mi-carème. Acconcher was soon restricted to the sense of lynn down, because of illness, and then, later still, to 'lying in' for childb rth.

From the 13th cent onwards we see acconcher used in this modern sense, though not exclusively so: La contesse Marie accoucha d'une fille Villehardouin, 180. Ou the other hand, the word kept its sense of simply lying down in bed till the 17th cent, as we see in Nicot's Dict. 1604 : Il s'est acconché malade, ex morbo decumbit. -Der accouchée (\$ 201), accouchement (\$ 225), accombeur (\$ 227).

ACHALANDER, va. to attract customers. From chaland, q. v.

ACHARNER, va. to flesh, to excite, set against. It is an example of that numerous class of hunting terms, spoken of in the Introduction, § 13, which have passed from their special and technical sense to a general use. Achainer was oughedly a term of fileoury, meaning to jut fesh on the line, to exerte the bird. From this proper sense of giving the falcon a taste of flesh, to teach him to tear other birds to prices, comes the figuritive sense of to excite, or mutate animals, then men, against one another. At the beginning of the 17th cent the word still had both senses 1604, Nicot's Dict, has Achainer, c'est mettre de la chair des us : le contreire descharnen four oster la chair de descos le limite. On front aussi achainer four treusement addenter et deschirer ancien soit en son corfs, sa chivarce on son honneur. comparest fas metathore. Acharner is from I adearnare . The decarpare, found in Veretus. Acarnare is found, without my instance cited, in Dicting Adearnare assumbates de ec (£ 168), who ac acearnare, where (\$168) by ce = e acarnare. whence acharner by c - ch (\$ 120), are er (§ 263), and continuance of initial a rn, and modul a. L. adeaptare \* compd. of class Lat can-That Fr. achiter, though derived from the same root with accipere, should bear a different sense, will not seem astomshing, when we find in Festus that the Gally Romans and emero for accipere: 'Nam entere antiqui d cobant pro accipere.' Adcaptare becomes accaptare by assumlation of de- ee (\$ 168). 'Et est upse alodes in count on Intevense quem pater mens et eyo accaptavimus,' Charter of AD, 1000, and Varsette, n. p. 157. In a Donation of 1060, Cartul S Victoris de Missilla, i. 411, we read, 'Accaptavit vincas de Finbreugo, quas plantavit Guido ... neceptavit terram subter collection S. Cincis' Accaptare becomes acater (11th cent ) by ee c (\$\frac{1}{2}\$ 166, 168), pt=t (\$ 111), are - er (\$ 263), and by continuance of metal a and medial a. Acater is successively softened to achater (§ 126), 12th cent., Livre des Rois, 119, then acheter (\$ 54), 13th cent, Berte any Grans Piés, 115 In the 16th cent, the Latinsts and pelants of the Renaissance wished to bring the word back to its Latin original, and wrote it achatter, as we see in Amyot and even in Rabelais. But the popular instinct rebelled, and did not let this word, hke ab ouche (q v), relipse into its Latinised form: so that from the beginning of the 17th cent, the learned had to abandon their innovation and conform to the popular prominciation by writing the word as of old, achter.-Der, achtt (q. v.), achteur (5 227).

ACHEVER, va. to finish. The Lat. caput, towards the end of the Empire, and in Merov, times, took the sense of an end, whence the phrase ad caput venire, in the sense of to come to an end. Aga, on. an agha (military officer), a Turkish word (§ ,0)

from O H G hazam (\$ 20), to harry, whence regularly haver. This verb, compd. with à, becomes ahacer, which, through the aspirate sound, became transformed into agacer.

+ Agape, f. a love-feast, from Gr. άγαπή (§ 21, note 1).

Agaric, sm. a mushroom, fungus, from L. agaricum.

AGASSF, f. a magple, from O. H. G. agalstra (§ 20)

AGATE, f. agate; from L. achates. For the change of chimto g see § 129.

AGE, sm. age The circumilex accent shows that a letter has been suppressed: and so we find in the 16th cent, the word written aage; in the 12th cent, eage; in the 11th cent (in the Chanson de Rolind) edage, from commen Lat. actaticum', deriv, form of actatem. For the fall of the Lat, medial t, activaticum -edage eage, aage, age, see § 11°. For the change of the Lat, suffix -aticum into -age (act-aticum, ed-age) see § 248.

It is easy to see how this permutation took place, and how, e.g. volaticus (used by Cheero in sense of light, inconstant) became volage eight centures later volaticus being accented on the antepenuit, the short penultimate i disappears (see § 51); volaticus their becomes volatige (e.changed into g. see § 127), and lastly voluge.

On this model many Fr. words have been formed, as moull-age, from mouller,

cousin-age from consin, etc

The Provençil, which changes -atieum into -atge (as in very O Fr.), and writes carnatge, message, ramatge, for carnage, essage, ramage, confirms this rule of permutation.

Towards the end of the 11th cent., when the Lat, accent was lost, and the Fr. language already formed, Lat. forms in -atieum disappeared from Lat. documents, and the termination -agium, copied from the Fr. termination takes its place. Thus, while we find up to the 11th cent, such Low Lat, forms as arrivationm, arrivage; hominaticum, hommage; missaticum, message, formaticum, fromage, the 13thcent. Lat. will not have them, but sixs arrivaguum, hominaguum, messaguum, from a grum, etc., which are only fr. words wrapped up in a Latin termination by the clerks at a time when no one knew the origin of these words, or of their formative sullix This distinction between the late Lat, which gave both to the Fr language, and the Low Lat. remodelled on Fr. torms, is most unportant for the historical study of the Fr. language, and the student ought to have it always in his mind.

AGENCER, va. to arrange, dispose gracefully; from Low L. agentiare\*, deriv. of gentus\*. See gent.

In passing from -tin to -ce this word has undergore two successive changes --

1. It is unnecessing here to remind the reder that the Lat. e was always pronounced k before all vowels aftermut, viceur, civitate, were proud, fekerunt, vikem, kivitate, save before an i followed by a vowel (e-m, e-ie, e-io, e-in), in which case the e was proud tz (as is proved by Meroymejan Forumlas, where we had migras for uneras).

The groups t-ia, t-ie, t-io, t iu, were proud, not like h in and h. but like h in fricantion; as is proved by Liadkish in fricantion; as is proved by Liadkish winting cerim, solacio, precinim, perdicio, facionem, concrecisione, nepsia, alteressione, to etiam, solitio, pretium, perditio, rationem, congregatione, neptii, altereatione, showing also that in pronunciation trained era were the same thing.

2. When the c is followed by one of the groups, ia, ie, io, iu, and torms the combinations cia, cie, cio, ciu ci is usually changed into a soft s, ss. g, and the Lat i is dropped; as in macronic macon, provinciali, frowingd, suspicionem, soufgen; crescionem, cressur efc. Thenectorward ti, which (when bellowed by an a, o, or u) is identical with ci (is is shown above), must, like ci, drop the i and become g, hard s, ss; demantiare becomes denoncer, cuntionem, chanson; scutionem , leussen. A like change takes place with -tea, which becomes -tia (ea co, cu, becoming in, io, ru, as may be seen nucler abreger; ep, also the forms Dius, for Deus, minus for mens, in very ancient Lat inscriptions) then such words as platea, mater, linteolus, becoming platia, matra, lintioles, are rendered according to rule into flace, masse, linearly

The following are the cases of change of tia, tio, tiu, into  $\rho_i$ , ss, s hard:—

I. c soft in antianus, ancien; cadentia, chance, etc.

2. ss, as in captuare, chasser, etc.

3. s hard, as in cantronem, chanson, etc. See Hist. Grain, p. 61.

The change of fi into soft s, as in acutiare, againer, is uncommon. See flist Gram p. 192.—Der. agent, agence, agencement.

AGNEAU, sm. a lamb; from O Fr. aguel, and this from L. agnellus 1 preceded by a vowel (al, cl, il, ol, il) temains unchanged in Fr. in the early period of the l language (mollis, md, malva, mdve.) porcellus, pourcel); then wis softened into n (non, manye, fourceau) towards the middle of the 12th cent | Sec § 157.

1. Lat. al became au, eau, as in alba, aube, etc.

2. Lat. el became au, eau, as in el'mosyna\*, aumone, etc; ieu in melius nateux; similarly with dim, suffixes in -ellus, in () br. d; then softened for the most put into -eau, -au, as bellus, bean, etc

3. Lat ilb came eu in capillus, cheven, etc.; -ean in sigillum, O. Fr seel seem; o, ou, in basil'ca, basoche, and fil'carri, fourere, which was written more correctly feugère in O Fr.

4. Lat. ol became ou in colis ( = caulis), chon, etc ; eu in mol narius, menmer, e'c ; au m voltulare\*, viutrer.

AGUFRRIR, va. to accustom to war See guerre.

AGUETS, sm. pl. ambush, a word used only in the pl m mod. In (etre mix aguets, to be lying in with, in O. Fr. it had a sing, also, which is used as late as Malherbe, Quand l'aguet d'un firate arrêta lear voyage. Aguet is the veibal sm. (§184) of the old verb aguetter, compd. of guetter, q. v.

AHEURTER (S'), vfr. to be bent ou, obstinate. See hearter

AHURIR, va. to imaze. The word hire. originally incaming hair standing on end, produced ahuri (la gent barbee et alurre, a folk bearded and of up-standing locks is in Robert le Duble, 13th cent ). Ahuri later received the sense of 'standing on end from fright,' then 'terrified'; and lastly comes the verb in its modern sense, which is a diminution of the old meaning (§ 13).

AIDER, va. to aid, help; from L. adjutare (Varro and Terence), later ajutare, which

must be written aïutare, as the Latins pronounced j between two vowels as i. For this cause raja, boja, major, bajulare, have become in Fi. raie, bouée (O. Fr. boie), mare, bailler, as they were proued rala, bora, mator, baillare. To piss from aiutare to aider we find two philological changes: (i) the loss of the u, anutaro becoming artaro (§ 52), (2) the change of t into d (§ 117), then aider by are er, § 263.

I. Loss of the u. We have seen (§ 52) that every your immediately proceding the tonic vowel (like the i of sanitatem), disappears in Fr. if short (san-i-tatem sante), remains if long (caem-e-térium = cim-e-tière). This continuance of a long atomic vowel has only a few exceptions the atomic vowel which directly preced s the tonic syllible disappears, when long, in mirābilia, merveille, etc. § 52. There are about twenty of these exceptions to the rule of the continuance of the long atomic vowel. which are to be explained by two facts: (1) that in many of these words the contraction is quite modern, and the long atome vowel remained in O Fr. :-courtier, sermen', soutcon, larem, were in O. Fr., more regislarly, couretier, serement, sou/econ, lareun; (2) that in the common Lat, many of these words had already lost this long atomic vowel, and the Fr. simply reproduced this irregulanty, and could do nothing clse; thus in the 7th cent, we find cosinus for consobrinus, costuma for consuctudinem, matinum for matutinum, elmosna for eleemosyna, vercundia tor verecundia.

2. The softening of the t into d. Auttaro having become aftaro changes into aidare. This softening had aheady tiken place in comm in Lat, in which it was very frequent, especially when the t hay between two vowels: iradam is found for iratim in an inscription of A.D. 142; limides, lidus, terridoriam, mercadum, strada, for limites, litus, territorium, mercatum, strata, in 5th cent. documents, and in the Salic Law; thus agim, Classical Lat said quadraginta, quadratus, from quatnor, which, regularly, should have been quatraginta, quatratus. For the full history of the Lat, t see § 117.

Der aule, verbal subst. of auler, aidant, which is a doublet of adjudant, q v. AIEUL, sm. a grandfather; from L. aviolus. By the side of the class, form avus, the

popular Lat, had a form avius, which is to be found in certain structure, documents, (Such double forms as avius and avius and luscinus, etc.). From this form avius the Romain made the derivative aviolus, by adding the dim, suffix -olus (ep. gladiolus, filtolus, lusciniolus, etc.). Aviolus, properly 'a little grandfather,' som supplanted avius, in accordance with the Romain tendency to use diminutives. See § 13

In the passage from aviolus to areal (O. Fr arol, Prov. arol, forms which help to explain that transition), there were two philological changes.

The medial v w is dropped: a/v)iolus, aneil, at patv.one in, faor; patv ore in, ferr, etc. (§ 141). This dropping of v between two vowels was not rate in Lat; the Class, Lat, said bonin for bo(v) ini, and it for audity i, redii for redi(v)), and this tendency became vet more marked in popular Lat, where we find russ for ri(v) us, ars for a(v) is, also moember for no v) ember in Inscriptions; and in the 7th cent, paonein for patv) one in the Casel Glosses.

2. Aviolus thus reduced to aiolus. produced the O. Fr. acid, which became aired by softenmer the 6 h to en (see accueillar). On this change of the softex -olus into -end two remarks are neede! (1) suffices in -tolus (and with these may be classed these in colus, for they were carly changed into ciolus as is shown by the Inscriptions, which give us capitolis for cipreolus, and the Cassel Glosses, which have lineralo for lineealo, etc.) were, abent the 7th cent, subjected to a change which turned the two short syllables i o into a single long syllable io; so that these words were no longer accented -folus, but -iólus: (2) these suffixes in Fr became -inl, -end, or -el; as m aviolus, areal; capreolus, chevreud, luscimolus, rossignol (§ 253). AIGLE, sm. an eagle, from L aquila gularly contracted into aq'la (see rule in § 52), the Lit aquila has also undergene two changes in its transit into br. . (1) the accented a became at, and (2) the q becaine g.

1. The Lat accented a became Fr. ai, when short, as in a mo, aime, when long by nature, as in ellins, clair, when long by position, as in acrem, aigre (§ 54). The atomic Lat, a becomes ai in Fr. when

it is short, as in a cutus, aigu; when long by nature, as in a latus, aile, when long by position, as in fascellum, fasceau, etc.

2. q (equivalent to the hard e) becomes g, aq'la, aigle (§ 129); or rather ql becomes gl, and has thus undergone the same change as has befallen the conesponding el, which has become gl in coelesta, rglise (§ 129). Thus many French persons still pronounce the words reine claude as reine glande, etc.

AIGLON, sm a little eagle, eaglet; dim, of aigle, q.v.; formed by the addition of the suffix-on, as in auon, chaton, ourson, ration, from ane, chat, ours, rat. This suffix-on is derived from the Lat, suffix-onem, which was used for the same purpose; from sabulum, sable, said, the Romans formed sabulonem, sablon. Aiglon is a doublet of aguilon, q.v.

AIGRÉ, adj. acid. sour: from L. acrem For a = ar see § 54: for hard e g § 129 Aigre is a doublet of arre, q v.—Der aigrem, aigricht, aigrir, aigrement.

AlGREFIN, sm. a shaiper, swindler. Origin indenown.

AIGRETTE, sf an egict, a kind of white Leron, whose held is tuffed with feithers, which have come to take the same name. Menage, in the 17th cent, said, II y a certains flumes in denx costez des alles sin le dos de l'argiette, qui sont délies et plumbes et qui sont vendues bien cheres ès bass fine de Turquie.

The O H G. hegro (a heron) (§ 27) became Fr aigre, of which aigreties the din , meaning a little literon (for din), suffix the see § 281). This O H G hegrobecome in Low 1 aignonem, in the 10th cent. aironem, whence O. Fr. hairon; 15th cent. heron. The reduction of grintor may be found in peregranus, felerin (§ 134).

AlGI, adj sharp, peinted; from L neutus Forn - arsce § 54, tore - g § 129 note. As to the reduction of the termination -utus into n (§ 201), or (to natrow the subject still more) the dropping of the lat dental t, this d d not take place in the passage from Lat, to Fr.; t was first clanged into d in Merovingian Lat. (see under ander), and this d remained in the earliest O Fr. monuments, down to the end of the 11th cent thus spatha, nathin, honorata, become spada nadum, honorada, whence coincide O. Fr. forms espede, ned, honorede, which after the beginning of the 12th cent.

dropped the d and became espie, ne, honorie, Acutus must have passed through the form aigud before reaching aigu, as virtutem, cornutum, canutum, cane vertud, cornud, chenid, and then vertu, cornu, cheni,—Det. The only word derived from aigu is the veib aiguiser, from L. acutiaro?. We have just seen how acutus became aigu: for the change of the termination—tiare into -ser (or of Lat.-ti into softs) see § 264 and aiguirer.

AIGUE, yf. water; from L. aqua For the change of a into at see § 54, and of q into g see § 129, and argle. The word argue, lost in mod. Fr., remains in some names of places, as Argues-Mortes, Chandes-Tignes; and in a certain number of derived words, as arguière, a water-vessel, (wer; arguade, a water supply (for ships at sia); arguemarine, like equa-marine, sea-water, the equa-marine or beryl; arguay.r, to wash (linen or a horse).

AIGUIERE, sf. a jug, ewer. See aigue.

AIGUILLE, y. a medle, from L acuela 8. The Lat. acicula, dun of acus, which, like so many diminutives, has taken the place of its primitive (see § 18), had two forms, acicula which is to be found in the Theodosim Code, 'oportet can usque ad aciculam capits in dono marri,' and aciculam which was soon contracted into acucla (for the law, see § 51). AILFRON, sm. a pinion; formed from ale, like bikheron from bikhe, chaferon from chape, forgeron from f rge, moncheron from mouche, monsseron from mouse, puceron from fuce, etc.

AILLEURS, adv. elsewhere; from L. aliorsum. For a = at see § 54, 3; and for o = eu, § 79 .- Der. d'ailleurs.

AlMABLE, adr. annable; from L. amabilis. For -ábilis = -able see § 51 and § 250.

AIMANT, sm. a loadstone, magnet; from L. adamantem. Aimant, in O. Fr. aimant, Prov. adiman, has lost the medial Lat d (see § 120); a'amantem next became O. Fr. amant, by changing a into i; the second a of a(d)amantem being thus distinctly represented by i: this change is found in a few words-cerasus, cerise; carrophyllum, girofle; avellan a aveline; jacitum, gite; bombitare, bondir; retinnitare, retentir.

This change belongs to the Lat language, in which men said equally avellina or avellana, and formed in-sipidus from sapidus, inj-micus from amicus, instituto from statuo, dif-ficilis from facilis, ac-cipere from capere, e-ripio from rapio, etc. Aimant is a doublet of diamant, q v -Der. aiman'er

AIMER, va. to love; from L. amare. For

 $\mathbf{a} = ai$ , see § 54.

AINE, of the groin; corruption of O Fr. aigne, which from Lat. inguinem. Inguinem produced aigne, as sanguinem, saigne. Inguinem, contracted into ing'nem (after the law given § 51), has become aigne, by i = ai (see § 74), and by ng = gn, as may be seen in jungentem. joignant; tingentem, teignant; sanguinem, saigne,

AINE, sm and adj. elder, eldest. O Fr. ainsné, before the 13th cent ainsné, compd of ains and ne. Instead of primogenitus, the common Lat, usually said ante natus In the 7th cent, Isidore of Scyille translates antenatus by privignus, and primogenitus by ante natus. He opposes AIR, sm. an; from L. aer It is easy to antenatus to postnatus, the latter standing for the younger, the former for the eldest, son.

Ante having become ains in Fr. (by a = at, § 54, 3), and natus having become né (q. v), ante natus became first ams-né, as post-natus became puis-né (whence puine). Just as the common Lat said ante-natus and post-natus, for older and younger sons, so O. Fr. opposed ains-né to puis-ne or moins-ne. The same distinction is met with in the Contumes de Beaumanoir, where the rights of the ains-no are legally distinguished from those of the buis-né.

The form ains-né was changed in the 14th cent. into ais-né by dropping the  $n_i$ a process met with in the Lat ; for while the texts of carly Lat, read formonsus, quadragensinius, quotiens, Class. Lat. wrote formosus, quadragesimus, quoties; and thus, or turn, the Class forms, censor, mensis, impensa, inscitia, mensa. Viennensis, were reduced to cesor, mesis, impesa, iscitia, mesa. Viennesis, in common Lat, as Vario, Festus, and Flavius Caper tell us. The Meroyingian Lat, carried on this tendency in Chartularies of the 7th cent, we read masus for mansus, remasisse for re-The following is the full mansisse, etc. list of cases in which this reduction takes place: - mansionein, maison; mensina, mesure; spousns, efoux, constare, conter; insula, ile, ministernim, meter, mensis, mois, monasterium, moutier; peusum, toids; prensus t, tras, tensa, toise; tonsionem, toison, trans, très; pagensis, fays; preusionem\*, frison; mansura, masure; pensare, feser; mensurare, mesurer; thronensis, tournois; graccensis\*, grégeois, pensile\*, toêle. See also \$ 162

Such modifications do not belong to any one period of a language; and as Lat, and Fr. are successive conditions of the same language. this reduction of ns into s took place not only in the transition from Lat, to O Fr., but also in the passage from O. Fr. to mod, Fr; ams-no became as-no in the 14th cent., and aisné passed into aîné in the 17th cent.—Der ainesse.

AINSI, adv so, thus, in this manner O Fr enst, further back isi; from L in-sic See si. The origin of the word is by no means certainly known

see how air came to bear the sense of natural disposition, by comparing it with the Lat. spiritus, which means breath, wind, passion, and disposition (§ 15) The musical signification of the word was adopted in the 17th cent, from the It, aria, which is also derived from Lat aer: from it Fr. air has taken the It. sense, though it has retained its Fr. form.

AIRAIN, sm brass; from L aeramen. The suffix -amen became -ain (airain) as in levamen, levan, etc. Just as the suffix -amen became -ain, -aim, -en, in Fr., so the corresponding suffixes -imen, -umen, became -in, -ain, -or, -un, in Fr. (see § 226).

AIRE, f. an eyry; indirectly from the Germ. aren, to make one's uest, which from Germ. aar, an eagle (§ 20) .- Der. airer.

AIRE, J. a barn-floor, threshing-floor; from L. area. Area first became aria by the regular change of ea into ia (see under abreger and agencer); aria became aire by a=ai through attraction of the i, a phenomenon which appears in the late Latin from aera tor area (§ 54, 3). Ane is a doublet of are.

AJOUTER, va. to add, join; O Fr. ajouster, Prov. ajostar, from L. adjuxtare\*. The etymological meaning, which is 'to put side by side,' is to be found in the 11th cent.; thus in the Chanson de Roland one of the peers bids the French s'ajouter en bataille (place themselves in rank, side by side).

Adjuxtare, which becomes ajuxtare (for dj=j cp. djunuum\*, jour; hordjum\*, orge; assedjare\*, asseger; see §§ 120, 137), produced agouster by u = ou(§ 97), and by x = s (to be met with in

Lat. inscriptions, in which we find sistus for sextus, obstrinserit for obstrinxerit). This change of x into s (§ 150) occurs in Fr. m axis, ais; buxus, buis; dextrarius \*, destruer; and in the eight O. Fr. words sextarius, sestier; buxda \*, boiste; tax'tare \*, taster; fraxinus. fresne, juxtare \*, jouster; deexducere\*, desduire; deexviare \*, desvier; exclusa, escluse, which m mod. its tenses from three different Lat. verbs:---

(1) The 1, 2, 3 sing, pres. indic from Lat. vaděre; vado, je vans; vadis, tu vas; vadit, il va (O. Fr. il vat). (2) The fut. and condit j'irai, j irais, from the Lat. ire, by the usual formation of the fut (See Hist. Gram p 149.) (3) The remaining tenses, allais, allai, allasse, aille, allant, allé, are iclated to the infin. aller, which was in O. Fr. aler, and aner, and comes from Merovingian Lit. annre, a softened form of adnare, which properly signifies 'to come by water' (as in Cicero), but soon was much widened in sense; thus, in Papias adnare is used for 'to come by Lind.' The same remark may be made as to the corresponding word entire (to swim in Cicero), which even in Class, Lat significs to come? (no matter how), 'Dacdalus . . . . gehdas enavit ad Arctos, Vng Acn. 6, 16 (1 c by flying), or 'Enavimus has valles,' Sibus Ital. (1 e. by land). It is singular that the same trinsition from water to land occurs in the word adripare, at first mean ing 'to touch the shore,' afterwards 'to reach one's aim,' whence he arriver. See also § 13.

To pass from adnare, anare, to Fr aller, through the intermediate torms after and aler, there has been an unportant change of n into l. This change of a nasal into a liquid is not rare in Fr., as in orphaninus \*, orthelm; Ruscinonem, Roussillon, § 163; and even in falot, which stinds for fanot. For are er sec § 263.—Der. allée, participial subst. (\$ 187).

ALLEU, sm. allodial ownership O. Fr. alon. aloud, Sp. alodio, It. allodio; from Merovingi in Lat. allodium f, a word of Germ. onem, in common with all fendal terms, Allodium is from O H G, alod (§ 20), full ownership, the franc-allen (hereditary property, free from all duties to a higher lord), being opposed to benefice, which was originally a life-ownership, dependent on the will of the lord of the ficf. For loss of final d see § 121.

ALLIER, va. to mix, unite, ally; from It. alligare The Lat. g disappears from alli(g) are. this phenomenon, found in the last ages of Latmity (irrellatas is found for nigellatas in a Merovingian document), is common in Fr. (1) when the g preceded the accented vowel, as in au(g)ustus, doût; gigantem, géant, etc.; (2) when the g tollowed the accented vowel, as in exa(g):um, essaim; re(g)em,

roi, see also § 131.—Der. alliance (§ 192), allié (§ 201), alliage (§ 248), mésallier, mésalliance (Hist. Gram p. 180), rallur (Hist. Gram p 179), ralliement.

+Alligator, sm. an alligator; introduced by English travellers (§ 28, note 1)

Allocation, of an allocation, allowance; from L allocationem\*, from allocare. Allocution, of an allocution; from L.

allocutionem.

ALLONGER, va. to lengthen. See long -Det, allonge.

Allopathie f. (Med.) allopathy; from Gr. άλλος and πάθος, a medical system. See homwofatha -Det. allofathe.

ALLOUER, va to allow (a stipcid); from L. allocare\*. For letter-changes see loner. Lor assimilation of dl to Il, see § 168. See also allumer.

ALLUMER, va. to kindle; from L. adluminare \*, compd of luminare. Adluminare is alluminare in several 7thcent documents, by dl = 11, a frequent Lit assimilation, as in allucere or adluccre, alludere or adjudere, allucre or adluere, allocutio or adlocutio, alligare or adligare, allevare or adlevare, etc. This assimilation also went on in Fr. by change of dl into l or ll as in mod'lus. Allum i naro first bemoule (§ 168). came allum'nare by the regular dropping of the short vowel (§ 52) Allum'nare again became allumer, by mn = m, as in sem'nare, semer, dom'na, dame. It alluminare Piov. allumenar, allumar, will mark the transition from L. alluminare to Fi. allumer.-Dei, al umeni (§ 227), allumette (§ 281), atlumo 1 ( $\geq$  233),

ALLURE, of. gut, way of going (or dealing); from aller; like confur, smallure, brochure, etc., from confer, smaller, brocher (\$ 183).

Allusion, of an alusion; from L. allusionem.

Alluvion, of alluvium; from L. alluvionem.

Almageste, sm. a collection of astronomical observations made by the aucients Low Lat. almageste \*, a hybrid word composed partly of Arabic al (§ 30), and the Greek μεγίστη (§ 21).

Almanach, sm. an alminac; Low Lat. almanachus\*, from Gr. άλμεναχά, used in the 4th cent, by Eusebius for an almanae (\$ 21).

Aloès, sm. the aloe. O. Fr. aloè, from L.

compd. of à and lot, which in O. Fr. signified the standard of coin, as still in Sp. ley For the etymology of lot see that word.

ALORS, adv. then. See lors.

ALOSE, sf. a shad; from L. alausa, which was written also alosa. For au = 0 see Alphabet, sm the alphabet; from L. \$ 107.

ALOUETTE, f. a lark, dim. of O. Fr alone, just as herbette is derived from herbe, cuvette from cuve. (For the suffix -ette, see ablette and § 281.) Here, as often, the primitive form is gone, and the derivative, though dun, in form, has the sense of the original word (see § 18).

Alone is from L. alauda (used by Pliny for the sky-lark), a word borrowed by the Romans from Gaul, and introduced into Lat. by Caesar. (The true Lat. names for the lark are galerita, corydalus.)

To get from alauda to alone, the Lat. drops the medial d after the accounted vowel; as is found in the following cises: (1) when the subsequent vowel remains, as in invi(d)1a, envie; (2) when the subsequent vowel is dropped, as in ciu(d)us, cru, § 120.

The diphthong au is also changed into ou: this diphthong was pronounced by the Latins, not like Fr. o, but a ou; thus for aurum, taurus, the Romans said a-ourum, ta-ourus, not orum, torus. The o pronunciation was looked on as quite faulty by the educated Romans, and grammarians speak of it as common to peasints, and a thing to be avoided Festus tells us that the Roman country folks said orum for aurum, oricula for auricula, etc. Fr. language, arising out of the popular not the Class. Lat, has kept the rustic pronunciation, as in aurum, or; ausare \*, oser (§ 107); and in certain secondary formations, as parole, paraula, secondary form of parabola, forger, faurcare, of fabricare; tôle, taula, of tabula; somme, sauma, of salma.

In all these words the au became, and has continued to be o; in a certain numiber of words this was o in O. Fr, and in mod. Fr has become ou (see also § 107). The following is the complete list of AMAIGRIR, vo. to cinaciate. See maigrir. these changes :- laudo, love; laudemia \*, | louange; aut, ou; audire, our. gau- AMALGAME, sm. an amalgam. Origin undere, jour, claus (for clavus), clou; cauda, conard; innaucare\*, enrouer; AMANDE, sf. an almond. O. Fr. amende, colis (= caulis), chou; austarda (for avistarda), outarde; gauta \*, joue.

ALOI, sm. a standard, quality (of com); ALOURDIR, va. to make heavy. See lourd. ALOYAU, sm. a sirlom. Origin unknown (\$ 35).

+Alpaga, sm. alpaca; a kind of wool got from the alpaga, a kind of llama in South America (§ 32).

alphabeta \* .- Der. alphabetique.

Altercation, of an altercation, dispute; from L. altercationem.

Alterer, va. (1) to alter, to perturb, (2) to cause thirst; from scholastic Lat alterare, deriv. of alter, as in Germ, andern comes from ander. Why or how alterer passed from the sense of 'to change,' to that of 'to cause thirst,' is a thing that has no explanation. - Der, alteration, -able.

Alterne, od; alternate, from L. alternus. -Der, alterner, -ation, -atif, -ative, -ative-

ment. + Altesse, of highness; introduced in the 16th cent from It altezza (§ 25). Altes e is a coub ct of hautesse, q v.

ALUN, sm., alum; from L. alumen. For -umen = -un sec § 226

Alvéole, sm. an alveole, a little channel; from L alveolus

AMADOUER, va. to coax, cajole; a compd. of madoner's, a word of Germ origin, from Old Scand mata, Dan. made, to bait, allure (§ 20) -Der. amadou. Although there is no relation, as to meaning between amadoner and amadon, it is nevertly cless certain that the latter is derived from the former. In It. adescare comes from esca, which means both bait and touchwood as is also the case with Lat. esca. These relations show that the same metaphor which connects amadouer with amadou exists in several languages, and this companison of metaphors makes clear what is the origin of the word, though we may not be able to explain it. See also § 15.

-Der, amougrissement

known (§ 35).-Der. amalgamer.

corruption of L. amygdalum. Amygdălum, contracted mto amyd'lum, according to the rule of the Lat. accent (§ 51), first reduced the Lat. gd into d. as in Magdalena, Madeleine (\$ 131). Amyd'lum afterwards underwent the msertion of n, and became amynd'lum, just as, in Class, Lat., lanterna was used for laterna, thensaurus for thesaurus, rendere for reddere (in the Sahe Law), Inculisma at early times for Iculisma. This may be seen in the App. ad Probum. 'Amygdala non anniddola,' and in the Cap. de Villis, 'Volumus quod habeat pomarios avellanarios amandalarios.' Amynd'lum or amind'lum produced the O. Fr. amende, by in = en, as in infantem, enfant; in, en (§ 72). Amende tradly became amande in Fr. by en an, as we see in lingua, langue, singularis, sangler, etc., which words were written in O. Fr. with more etymological propriety lengue, sengher, etc.

The student will have noticed that the laws of phonetics have enabled us to explain every letter of this word, except the Lat. 1, which disappears: it is in the anomalous dropping of this 1 that the corruption of the word amande consists (as we have seen in § 172, note 1). We have seen (§ 168) that Lat. dl 184 always assimilated in Fr. into ll or l; so AMBLER, va to amble, from L. ambulare. that amind'him ought to have produced, not amande, but amoulle, amanle; just as brandler has become branler. is a doublet of amygdale, q. v. -- Der. amandier (§ 198).

Amant. sm. a lover: from L. amantem. Amant is a doublet of amant.

Amaranthe, of. amaranth; from L. amarantus.

AMARRER, va. to moor; DÉMARRER, va. to unmoor, cast off; compds, of print. marrer\*, which comes from Neth, marren (§ 20) -Der. amarre, amarrage.

AMASSER, va. to amass. See masse. — Der. amas (verbal subst., § 184), ramasser (Hist. Gram, p. 179), ramas, ramassis.

Amazone, f. an amazon; from L. amazon. AMBAGES, sf. pl. ambages, circumlocution, prevancation; from L. ambages.

+ Ambassade, of an embassy; in the 15th. cent. ambaxade, a word not found in

Fr. before the 14th cent., and shown to be foreign by its ending -ade (unknown in Fr., which has -ce not -ade. See § 201) It comes from Sp. ambaxada, a word 10lated to the low L. ambaxiata\*. This word is derived from ambaxiare \*. ambactiare \*, formed from ambactia \*, a very common term in the Salie Law, meaning in Meloy, Lat a mission, embassy Ambactia comes from ambactus, which from O. H. G. ambaht, a servant.

For the cular-ement of meaning see § 13.—Der ambassadeur, -drice (§ 228).

AMBE. (1) adj. both, (2) sm. a pair, from L. ambo, In the middle ages the phrases ambes mains, ambes parts, etc., were used for deux mans, les deux parts. The word survives as a gambling term, thus Far gagne un ambe à la loterre, i. c. 'I have drawn two figures,' 'a pair of chances'

Ambulant, adj. strolling; from L. ambulantem - Der. ambidance, ambidatone (\$ 233).

AME, J. the soul; from L. anima Anima being accented on the first syllable loses the atome i (see § 51), and is contracted into an'ma, whence O, Fr. anme. In Jourville the word takes the form amme, by assumlating nm into rim (§ 168), a regular step, known even in Lat (as in immemor for numemor, immigrare for inmigrare, immaturus for inmaturus, etc.) In the 15th cent, amme became ame, by the reduction of the mm into m, a process marked by the addition of the circumflex on the a m mod. Fr. See also § 7.

AME, adj. well-beloved; from L. amātus. For -atus = -é sec § 201. Amé is a

doublet of aimé.

Améliorer, va. to ameliorate, improve; from L. ameliorare. Der. amelioration. + Amen, sm. amen; introduced from Heb.

AMENDER, va to amend, better; from L. emendare The unusual change of e into a is seen in accorded e = a in per, far; remns, rame: lucerta, lézard; and m atome e = a in terocem, farouche; petgamenum, farchemun. In common I it. we find lucarna for lucerna: marcades for mercatus in Merov. Chartularies. See § 61, § 172, and Hist, Gram. p. 48 - Der. amende (verba! subst., § 184), amendement, amendable.

AMENER, va. to bring, conduct. See mener. -Der ramen r.

Aménité. J. amenity, pleasantness; from L amoenitatem

Amenuiser, va. to plane down (a plank). See menu.

 $a = e \text{ see } \S 54 - \text{Det}$ , amèrement.

AMERTUME, St. bitterness; from L amaritudinem. Amaritúdinem first lost its atome i (§ 52): then, just as amarus became amer, amar'tudinem changed its second a mto e (§ 54). In the suffix údinem the atome i disappears, according to the law of Lat. accent (§ 51), and it becomes -ud'nem which becomes Fr. -ume: so consuctudinem, contume; incúdinem, enclume (§ 234). This change doubtless took place before the beginning of the Fr. language, as we find in 6th-cent documents the forms constuma, costuma, for cons'tudinem, consuctudinem

Améthyste, of. the amethyst; from L. amethystus

AMEUBLEMENT, sm. furniture. Sce meuble. AMEUBLIR, va. to furmsh. See meuble.

AMEUTER, va. to teach dogs to hunt in pack, to get them together; a huntingterm which has passed into common speech (see § 13). Also as upr. s'ameuter, to join a pack, party company Amenter is 'to set the dogs en meute,' to collect them. For etymology of amenter, see meute.

AMI, sm. a friend; from L. amicus. The medial e after the accented vowel dsappears, carrying with it the vowel that follows it, as in intuitious, ennemi; focus, Ammoniaque, of. ammonia. O. Fr. amfeu (§ 212). When the medial c after the accented vowel is followed by an a, that

vowel remains in Fr., as in ami(c)a, amie

AMIABLE, adj. friendly, anneable, gracious; from L. amicabilis. For the loss of the Lat. c see § 129 and Hist. Gram. pp. 81, 82; for -abilis = -able see § 250.

Amiante, sm. amianthus; from L. amiantus.

Amical adj. friendly; from L. amicalis\*. -Der, amicalement.

Amiet, sm. an annee, from L. amietus

AMINCIR, va. to make thin. See nunce,-Der. amin assement (§ 225).

+ Amiral, sm. an admiral; introduced soon after the Crusades, from Ar emir or amir (\$ 30) It answers to Low Lat amiraldus For -all see § 195 -- Der amirante, in O F. amiralte; for 1=n see

§ 157. AMER, adj. bitter; from L amarus. For AMITIE, of triendship; in O Fr. amistic, which is formed through amiste from amista (for a e ic, cp gravis, gruf; pietatem, filie, inimicitatem, viimine, § 54); an earlier form is anustit, which answers to It, omisia, Sp. amisiad, Catalan amistat, and comes, as do these three words, from L. amicitatem\*, a common Lat. form of amicitia (Amicitas was formed from amneus, like mendicitas from mendicus, antiquitas from antiquus, etc.)

In passing from amicitatem to anotic, or rather to O. Fr. amisti, we find three philological changes (1) the Trust before the accented vowel, anne intatem, disappears (see § \$2); (2) in the this contracted Lat, word anne'tatem, final -atem -c (see § 230), and (3) e=s, as we have seen it in the soft lat, c under agencer. it is not so common in the case of the Low Lat c (\$ 120).

Lat. hard e becomes s in Fi., or more usually the guttural e becomes a sibilant, as may be seen in the following .--

1. c - s, as congulum, saugle.

2. C - SS, as in junicem, gentsse.

3. C -x as crucem, croix.

4. c = z, as lacerta, lezard.

Amistié finally became amitié by suppression of the s (§ 148)

Arrhes, f. pl carnest-money; from L. arrha. -- Der. arrher.

ARRIERE, adv. behind; from L. ad-retro \* hke derrière from de retro. The L retro became in O. Fr rure:-(1) by e- te (§ 56), (2) by tr -- r, as in fratteni, frereLat. tr first became dr (see § 117); dr became rr by assimilation (§ 168). The rr is softened into r in such words as fratrem, frère; deretranns \*, derrain, whence O Fr. derramier, now dermer (\$ 168). Next, the Merov Lat having produced the compds, ad-retro, de-retro, these became respectively arriers, derriers, by  $d\mathbf{r} = rr = r$  (see above). The O. Fr. had a form arrive, which comes from arrive; cp. acirer, from acter - Det, an inage, arrier (1.

ARRIERE-BAN, sm, the amere-ban, summoning of a fendal array; from the Merovingian ari or hari (§ 20) and ban, q.v. The word, though assimilated to arrure, has no connexion with it.

pare\*, which is arripare in a 9th-cent, text, and arribare in an 11th-cent chartulary.

Arriver was first a sea-term, meaning, like its primitive adripare, to come to shore. In a 12th-cent, poem, the Lite of Gregory the Great, a fisherman pilots travellers to an island in the high sea: and, says the old poet, he succeeded Tant qu'al rocher les arriva, i e, he made them touch, or reach, the rock. This original meaning is still visible in a collection of admmistrative rulings of the 13th cent, in the Livre de Justice. Here we read that boatmen may arriver their boats, and fasten them to the trees ashore From the 14th cent. arriver begins to lose its first meaning and takes the more general sense of reaching one's end, arriving.

We have seen under aller the passage from the metaphor of scafaring to that of walking: adnare in Cicero = to come by sea, in Papias = to come by land (§ 13).

For dr = rr see § 168, for p = v see § 111. P first becomes b before becoming v; thus, between Lat. arripare and Fr. | arriver we have the intermediate Low L. arribare. This softening of p into v is found in assopire\*, assourir, purce (O. Fr. pevrée) from pip'rata .- Der arrivage,

The It arredo shows still the German t (cp. § 117, for medial t=d), which the French language commonly drops, as in gratum, gre; acutus, aign, etc. (See Hist. Gram. p. 82.)

ARRONDIR, va. to make round, enlarge. See rond.—Der. arrondissement (§ 225.

note 4).

ARROSER, va. to sprinkle, water; from L. adrorare (Marcellus Empiricus). For dr = rr see § 168; as for r = s (adro-r-are. arro-s-er), it is to be seen in / lusieurs, beside (O. Fr. bericle, beryllus): chaise (chaire, cathedra) (§ 155). This phonetic change of r into s or z is old: Theodore Beza, in the 16th cent, tells us that the Pausians said pize, mèze, chaize, Thiodoze, Mazie, for père, mère, chaire. Theodore, Marie. Palsgrave (1530) remarks that at the court people said not Paris, but Pazis. permutation is still to be found in some patois, specially in that of Champagne, which sivs écuzie for écurie, frèze for frère, etc.—Der. arrosage, arrosort, arrosement.

Artificieux, adj. artful, cunning; from L. artificiosus.

ARTILI ERIE, sf. artillery; a word which existed in Fr. more than two hundred years before the invention of gunpowder. It then had a double sense, being used of (1) arms or engines of war, generally; and specially such arms as the bow, arbalest, etc., weapons of oflence, to shoot with: - Quiconque doresenavant voudra etre artilleur et user du mestier d'artillerie en la ville et banlieue de Paris, c'est à savoir faiseur d'arcs, de flesches, d'arbalestes (from a document, A.D. 1375). (2) Also, as in Joinville (13th cent.), it signified the arsenal in which such arms were deposited. soldiers of the artillerie were archers and crossbowmen; then when gunpowder came in, and fire-arms supplanted the bow, etc. the name for the older weapons was retained for the new. Joinville also calls the maître des arbalestriers the mastre de l'artillerie; and again he has nul ne tiroit d'arc, d'arbaleste, ou d'autre artillerie. Artillerie is derived from O. Fr. artiller, to arm. (This word survived long in the navy: as late as the 16th cent. the phrase un vaisseau artillé was used for 'an armed ship')

Artiller is in Low Lat, artillare k, which signified 'to make machines,' and came from the same root with artem. That artem should take in late Lat, the sense of the 'art of war' will be better understood when we remember that the same metaphor has produced engin (q v ) from ingenium (§ 13).

ARTILLEUR, sm an artiflery-man; derived from artiller. See artillerie.

ARTIMON, sm. the nuzen-mast; from L. artēmonem, used by Isidore of Seville in the same sense. For e=1 see § 60.

+Artisan, sm. an artisau, mechanic; introd. in 16th cent. from It, artigiano (§ 25). Originally artisan meant an artist: Peintre, pocte ou aultre artisan, says Montaigne, iii. 25.

+Artiste, sm. an artist; introd. in 16th cent, from It. artista (§ 25). For -iste, denoting a person by his calling, see § 217.

Assassin, sm. an assassin, a word of historic origin (see § 33). Assassin, which is assacts in Joinville, and in late Lat. hassessin, is the name of a well-known sect in Palestine which flourished in the 13th cent., the Haschischin (drinkers of huschisch, an intoxicating drink, a decoction of hemp). The Scherk Haschischin, known by the name of the Old Man of the Mountain, roused his followers' spirits by help of this drink, and sent them to stab his enemics, especially the leading Crusaders Jomville uses the word assassin in the sense of a member of this sect, but from the 15th cent, the word becomes a synonym for a minderer, and loses its original and special signification. We have at this day anite forgotten the origin of the word, and the fact which introduced it to Enrope The same is time of several other words of the same kind, such as the berline, which originally meant a Berlin-built carriage, or seide, which is the name for a fanatic blindly devoted to the Prophet in Voltaire's ' Mahomet.

ASTICOTER, va. to plague, tease. astequer. [Undoubtedly from Ger. stecken, to puck.' Littré.

ASTIQUER, va. to polish leather with a ATERMOYER, va to delay payment of, put glazing-stick, called an astic. Origin unknown (§ 35). Littré says it is a bone (? thigh-bone) of a horse used by cordwainers to polish their leather; he derives it from Germ, stich, a point, which would suit well the actual sense of asheoter. Athlète, sm. an athlète; from Gr. αθλητής. Asticoter is derived from astiquer in the metaph, sense of 'to plague, tease' Frequentative verbs of this kind are not rare in by as picoter for piquer, trembloter for trembler, etc.

Astragale, sm. the ankle-bone; from L. astragalus.

Astre, sm. a star; from L. astrum.—Der. astral.

ASTREINDRE, va to oblige, compel, bind; trom L. astringero Astringero, regularly contr. to astrin're (see § 51), produced astrendre by intercalation of d,  $\mathbf{nr} = ndr$  (see Hist, Gram p. 73).

Astringent, adj. astringent; from L. as-

tringentem.

Astrolabe, sm. an astrolabe; from Gr ἀστρόλαβον, lit. an instrument for taking the position of stars.

Astrologie, f. astrology; from Gr. ἀστρολογία.—Der. astrologue 'Αστρολογία had no bad sense in Gr., and answered exactly to our Astronomy, not to Astrology.

Astronomie, sf. astronomy; from L astronomia. - Der, astronome astronomique, Astuce, sf. cuming, astuteness; from L. astucia. Der. astucieux (§ 229).

ATELIER, sm. a workshop. O. Fr. astelier (Bernard Palissy has hastelier), from L. hastellarius\*, a place at which are made the hastellae (for hastulae, i. c. little planks, splints, in Isidore of Séville). Hastella\* becomes in O. Fr. astelle, a splint, now attelle. The astelier (place for making these astelles) was at first simply a carpenter's workshop, whence it came to mean a workshop generally. (For such enlargements of meaning see § 13 ) As to the philological changes, the chief is the loss of the h, which may also be seen in habere, avoir, etc. (§ 134). This is to be noted even in Class. Lat.; er, olns, era (Old Lat. her. holus, hera), are very common in inscriptions, in which we also find ujus, ic, oc, eredes, onestus, omo, for hujus, hic. hoc, heredes, honestus, homo; and this though the Romans aspirated the mitial h strongly, just as is done in England or Germany. For the loss of the 8 see § 148; tor ārius = ier sce § 108.

Atome, sm. an atom; from Gr. aroμos.

Atonie, f. (Med.) atony; from Gr. aroria —Der, atone.

Atour, sm. attire, ornament; O. Fr. atom n. from O. Fr veib atourner. Atour comes from atourner, like tour from tourner, contour from contourner. For the etymology of atourner see tourner.

ÁTRE, sm. a hearthstone, fireplice. O. Fr. in 8th cent. astre (in the Glosses of Reichenau, meaning 'tile-flooring') For as = d see § 147. The atre was multiy the tiled floor of a corner nook, or firehearth, and the word comes, through astre, astrum, from O. H. G. astrih, flag ring, paved flooring (\$ 20). The Glosses of Reichenau confirm this, translating astrum by pavimentum.

Atroce, adj atrocious; from L. atrocem —Der. atrocité.

**Atrophie**, of atrophy; from Gr. ἀτροφία. -Der. Satrofihier

ATTABLER, va to place at table. See table. ATTACHER, va to attach, fasten, tie; DETACHER, to detach, unfasten; from a common radical tacher, as attendre and detendre are from tendre, and attarer and detirer from tirer. This radical verb has disappeared, leaving no traces in O. Fr., and its origin is nuknown (§ 35). Littré suggests a connexion with Gael, tac, a nail, Engl tin-tack, and to tack Attacher is a doublet of attaquer, q v .- Der. attachement, tattacher, soustacher, détachement.

ATTAQUER, va. to attack, assail. We have explained (Hist, Grun pp. 21, 22) how the lle de France dialect grew in the middle ages at the expense of the Norman, Picard, and other dialects, and ended by supplanting them; how, nevertheless, it accepted certain ready existed in the Île de Fr. dialect under a different form, and how thenceforth the Attention, sf. attention; from L. attentwo forms were used indifferently, either with the same meaning, or with two meanings. Attaquer (really the same word as attacher, as may be seen by the phrase ATTERRER, va. to throw down; lit, to s'attaquer  $\hat{a} = s'$ attacher  $\hat{a}$ ) was one of the latter. The history of the language also proves it, the two words being formerly used indifferently, attaquer being sometimes used in the sense of attacher, as in the following passage (14th cent.): Elle attaque au mantel une riche escarboucle (Baudoin de Sebourc). Sometimes, on the other hand, attacher Attester, va to attest; from L. attestari. means attaquer, livrer un combat, as in the following extract from a letter of Calvin to the Regent of England: A ce que j'entends, Monseigneur, vous avez deux espèces de mutins qui se sont eslevez contre le roy et l'estat du royaume: les uns sont gens fantastiques qui soubs couleur de l'Evangile vouldroient mettre tout en confusion; les autres sont gens obstinés aux superstitions de l'Antechrist de Rome. Tous ensemble méritent bien d'estre réprimés par le glayve qui vous est commis, veu qu'ils s'attaschent nonseulement au roy, mais à Dien qui l'a assis au suge royal, et vous a commis la protection tant de sa personne que de sa majesti. (Lettres de Calvin recueillies par M. Bonnet, ii. 201) Attaquer is therefore a simple doublet of attacher, q v -Der. attaque, mattaquable.

ATTARDER, va. to retard, delay.

(§§ 187, 188); from L. attractus, found in sense of allurement in Dictys Cretensis, et becomes it by incomplete assimilation (§ 168): et first became jt, which passed into it, the French i representing the Lat. c. This change is not rare in Fr.; thus after a, as in factus, fait; after e, as in confectus, confit; atter i, as strictus, etroit; after O, as coctus, cut; after u, as fructus, fruit. See Hist. Gram. p. 50. The spelling fact, tract, etc., is the grotesque and barbarous work of 15th-cent, pedants. The medicial F1. wrote it, as now, fait, trait, etc. Wishing to bring these words nearer to their Latin original the pedantic Latinists intercalated a c, and wrote faict, traict, not knowing that the it already represented the AUCUN, ady, any, any one, some one. AURONE, of (Bot.) southernwood; from L Abrótonum, regularly abrotonum. contrd, into abrót'num, according to the law of the Lat accent (see § 51), reduced tn to n, as m plat'nus, plane; ictna, rine (Hist, Gram, p. 81). br becomes ur is follows: b is softened first into v; this is next vocalised and becomes u, a transition very common in Lat. as nauta for nav'ta, naufragium for nav'fragium; auccllus for av'cellus, etc. (see § 113). Even at Lat, there are examples in which the u (as m Fr ) comes from b through v; thus abfero becomes aufero, by the way of avtero; abtugio, avfugio, aufugio Cp. also the common Lat, form ganta for gab'ta (gabata). This change of b into u is found in parole, tole, forge, purce, which words have lost their ctymol, form in mod. Fr., but in O. Fr. were paraule (parab'la), taule (tab'la), faurge (fabi'ca), peurce (peurce, pip'rata). This soitening also goes on with the Fr. Linguage: thus auray, saurai, were in O. Fr. aurai, for averai, from habere; savrai, saverai

from sapere, as is shown in the Hist Gram. p. 128.

Aurore, of the dawn, break of day; from

AVAL, adv. down-stream; from L ad vallem, used of a river flowing vale-wards: its opposite is amont (ad monteni), which is upwards, towards the hill The verb avaler (lit. to go aval) signified at first 'to descend,' and was but gradually restricted to its restrictions see § 13.) Some traces of the original meaning remain in mod. Fr, thenve, and in the word avalanche, which is properly a mass of snow which slides towards the vale. Lat dv is here reduced to v, as in advertere, avertir (§ 120).—Der avalanche, avaler

+Avalanche, of an avalanche; a word introduced from Switzerland. It is a participal form from the verb avaler. For its etymology see aval.

AVALER, va. to swallow. See aval.

AVANCER, (1) va. to advance, stretch forth; (2) vn to come forward. See avant .- Der. avance, avancement.

† Avanie, of molestation, amoyance. This word is a curious instance of the vicissitudes in meaning described in § 13. Avante, which is the common Gr. a Bavía (an affront), which again is from the Turkish avan (a vexation, trouble), was used originally of the exactions practised on Christian merchants by the Turks. Brought by travellers into Europe, the word soon passed out of its narrower signification of annoyance to Christians, to its present and more general sense of annoyance of any kind.

by Firmicus Maternus. For ast -aust see AVANT, (1) prep before, (2) adv. far, forward: from L abante\*, a form found in a few inscriptions of the Empire, e.g. in the epitaph, 'Fundi hujus dominus infans hie jacet similis Deo; hunc abante oculis parentis rapiciunt nymphaeo in gorgi'e Abante was certainly a common Lat, form, answering to ante, the class form. There is preserved a curious testimony as to this point: the common folk and ab-ante for ante, and an old Roman grammarian finds great fault with the form, bidding his readers avoid it "Ante me fugit" dicinus non "ab-ante me fugit"; nam praepositio praeposition adjungitur impriidenter; quia ante et ab sunt duae praepositiones' (Glosses of Placidus in Mai, iii. The Lat. b becomes v, a softening found in Lat.; in the oldest monmuchts we see acervus for acerbus, devitum for debitum: in 6th-cent, documents deliveritionem for deliberationem. This softening also takes place in Fr in habere. avoir, etc. (§ 113).-Der avantage (that which advances, profits, us, sets us avant).

AVOUER, va. to avow, confess; from L advocare. The history of this word gives us a curious example of those changes of meaning treated of in § 15. Originally avoner was a term of feudal custom avoner un seigneur is 'to recognise him for one's lord," to swear him fealty, to approve all his acts.' Thence came the second sense to approve.' Je t'avouerat de tout, says Racme in his Phèdre. Corneille says, Et sans doute son cœur vous en avouera bien Paul Louis Courier uses the word in this sense, when he says in one of his letters, Parle, écris, je l'avouerai de tout. After 'approval' it passes to 'ratification,' thence to 'recogninon as one's own,' as in avouer une lettre. Lastly, it means 'to recognise'

BABINE, of a lip, chops (of apes, etc.) (16th cent, in Béroalde de Verville, p. 258); der., with suffix me, from root bab (a lip), of Germ, origin, found in several mod. Germ. patois as buppe. [Littré refers to babouan, the baboon, q.v.] For pp b see § 111. +Babiole, sf. a phything, from It. babbole.

+Babord, sm (Naut ) larboard, port, from Germ, backbord, where back forecastle, which was orig, placed on the left side of the ship.

+Babouche, sf. a shipper; from Ar. baboudy (§ 30).

BABOUIN, sm. a baboon, monkey. Origin unknown (baboam in R. Esticine's Dict., 1540). See babine. I know no example of the word before the 14th cent; yet it certainly existed in the 13th, as Ducange quotes from an inventory, 1295, of the treasury of S. Paul's in London, A. 1295, 'Imago B. V. . . . cum pede quadrato stante super quatuor parvos babewynos'; and the verb bebuinare signified, in the 13th cent, to paint grotesque figures in MSS.

BAC, sm. a ferryboat, punt, fastened by a rope to either shore, a trough; from Netherl. bak (in 15th cent, in Enstache Deschamps). From this prim, has come the dun, bachot, a little bac, or boat. For the suffix of sec § 281. For c = ch see § 128. Bac also signifies a trough; brewers call the wooden vessel in which they prepare their hops a bac. In this sense the word has produced another dim. baquet; for dim. in -et see ablette and § 281. For transition of sense from boat to vat see § 13.

Baccalauréat, sm. bachelorship. See bachelier.

Bacchanales, f. pl. bacchanaha; from L. bacchanalia

Bacchante, of a Bacchante, prestess of Bacchis, from L. bacchautem , p. part. of bacchara.

+ Bacha, sm. a pasha, bashaw, a Turkish word, pacha (§ 30), mats Ar form bacha,

BACHE, of (1) an awning, (2) cistern, (3) Origin unknown (a word not older frame. than the 19th cent ).

BACHELIER, sm. a bachelot. Prov. baccalar, It. baccalare, Mcroy. Lat. baccalarius (a man attached to a bacerlaria . or grazing-tarm). 'Cedimus res proprietatis nostrae ad monasterium quod vocatur Bellus Locus, cum upsa baccalaria et mansis,' from a donation of 895, Chartulary of Beaulien, p. 05. Baccalaria, which is connected with baccalator, a cow-heid, found in 9th-cent documents, comes from baccalia, a heid of cows, which from bacca, a cow, a form used for vacca in Low Lat. For change of v mto b see \$ 140. Baccalarias is first a cow-herd, then a farm-servant; moreover, in Carolingian texts we have lists of serfs from which we see that baccalarius and baccalaria are applied only to young persons over sixteen years of age, old enough to be engaged in fieldlabour: thus, in a Descriptio mancipiorum, or list of property of the Abbey of St. Victor at Marseilles (9th cent), we find a list of serfs living on a colonica (or breadth of land tilled by a colonns): 'Colonica in Campania: Stephanus, colonns; uxor Daia; Dominicus, filius baccalarius; Martina, filia baccalaria; Vera, filia annorum xv (Chart, of S. Victor, n. 633). The word has thus passed through a senes of meanings before reaching its present modern sense. The bachelier, firm-servant, attached to a baccalaria, works under a colomis; this word then takes the sense, in fendal custom, of a lower vassal who marches under the banner of another; then it comes to mean + Badaud, sm. a booky, minny; introd, a vonth too young to carry his own banner as yet, who serves under a lord; then, in old University speech, he is a young man who studies under a Master, with a view to gaming the degree below that of Doctor or Master: lastly, it means a graduate in a Faculty.

Baccălărius becomes bacalarius by cc -c, whence in 11th cent baceler. For a = e see § 51; for arius = er see Hist. Gram. p. 184. and § 198 note 3. Baceler in 12th cent. becomes bacheler; for c -ch see § 128. Bacheler in 13th cent. becomes bachelier: for er = ier see § 66. From O. Fr. bathelier comes through the Normans the Engl bachelor. Let us add that towards the end of the middle ages bachelor, in the sense of a Graduate in a Faculty, was latmised into baccalaureus by the University clerks, who also invented for this newformed word the etymology bacca lauri, alluding to Apollo's bay. After inventmer baccalaureus (a word found in 15th, cent in N. de Clemengis de Studio Theol), they made out of it baccalaureatus, which was then turned into baccalaureat. It is hardly necessary to add that this ctymology has no foundation.

Bachique, ad) Bacchie; from L. bacchieus. BACHOF, sm. a wherry, little boat (1549, R Estienne's Diet 1; see bar, of which it is a diminutive, see § 284 -- Dei, bachotent,

BACLER, va. to bar, fasten (door or window); a word not found in Fr. before the 17th Bafrer, vn. to gourmandisc, stuff; from L. cent. It came in towards the end of the 16th cent, from Prov. baclar, to close a door with a wooden bar, a baeŭlus, whence baculare, whence baclar by loss of u (§ 52). In 1604 Nicot's Dict, gives this definition of bacler . BACLER est fermer huys

avec un baston par dedens, Pessulum foribus obdere: et s'entend de ce jetit baston ou cheville d'un pied de long qui ferme l'huys en manière de verroil de fer. From this literal sense the word got, in the middle of the 17th cent., the figurative sense of 'closing an affair'; and in 1690 Furctière's Dict. says, Bacler, fermer avec des chaines barres, bateaux . . . on dit figurément et bassement : C'est une affaire bàclée, c'est à dire conclue et arrêtre. For change of meaning see § 13. The original meaning of 'to slint' remains in some technical phrases, such as builer un port, to close it with chains, bacler une rivière, etc .-Der débâcler, débâcle (verbal subst.).

(1728) says, Baniner, jouer et foldtrer de la main. A badine is something, then, to play with in the hand: Trevoux's Dict. (1743) says, Babines, fincettes legeres qu'on appelle ainsi parce qu'elles servent à badance et à s'amuser en arrangeant quelques charbons. Hence can easily be seen how the word comes to mean 'a switch, cane,' to hold in the hand and 'flat,' but not to

BATTERIE, f. a battery. See battre.

Battologie, y. vain repetition; from Gr. βαττολογία.

BATTRE, va. to beat. O. Fr haire, from L. batere\*, popular form of battuere\*. For the loss of the ŭ see condre, tor loss of č see § 51.—1'er battant, battor, battere, batterie, battage, battennent, battre (partic subst), abattre, rabattre, combattre (whence combat, verbal subst), débattre (whence débat, verbal subst), rebattre, rebattu, ébattre (whence ébat, verbal subst.).

BAUDET, sm. an ass, donkey; a word of hist, origin (see § 33). In O. Fr. there was an adj. band, originally bald, from O. H. G. bald, gay, pleased, content. (For 1=u, see § 157.) This adi. band, frequently used in O. Fr., survives in modern Fr. in the compd. s'ebaudir, to rejoice (= &tre band).

Agam, we know that in the middle ages there was developed, if not invented, a

great cycle of fables on the life and adventures of beasts, each personfied under a special and significant name. Thus the Fox was Maitre Renard (Int. the cumung) the Bear was Bernard; the Ram, Belin. The Ass, ever gay and content (the beast ever band, as they said in the 11th cent.), received in that mythology the surname of Maitre Bandet, or Bandonn (both names dim, of band). This soubriquet stuck to the Ass, which is still includanced in Fr Bandet, 'the sprightly,' just as the Fox still gots by the name of Reynard.

BAUDRIER, sm. a balding, shoulder-belt; from L. baltĕrārius\*, denv. of balteus. Balt¿ĕrārius loses its ŏ, see § 52; it then becomes bandrier by changing (1)-arius into are (see § 198), (2) fr into dr (see § 117), (3) al into an (see § 157).

The present sense of boundrier is not earlier than the 14th cent. In the 12th cent, to designate the soldier's shoulder-belt, the word bandrie was adapted (from balteratus, deriv. from balteus), and the maker of these boundries was called a bandrier. This distinction, well marked in the early middle ages, became obliterated in the 14th cent, which in its ignorance gave the name of the thing made to the maker (just as it was thought that Piracus was the name of a man). We have seen a similar example of confusion between aragne and araigne, et v. See also § 198.

BELETTE, of a weasel; dim, of O Fr bele For dun, in -ette s e § 281. The O. Fr bele is Lat. bella . belette is therefore = la polie patte bee (the pretty little beast) While speaking (§ 15) of these popular metaphors, we remarked that their characteristic feature was that they were never isolated, but occurred side by side in several European languages. This is true also of this word, in Dan, the weasel is called den skjænne (the pretty), in Bavarian schouthier lem (the pretty little beast); cp. also O. Eng fany

BÉLIER, sm. a ram, bell-wether. The Neth bell (a bell) produced Low Lat. bella, and m Fr. bele (a little bell), which has gone without leaving a trace of itself, though its existence is reveiled by the word believe, q. v., der. from it, and by belier, which rightly means 'he who bears the bell.' We know the custom of fastening a bell to a ram's neck, as a signal for the flock and Thence by a metaphor the shepherd. common in Europe it comes to designate the ram. In Eng. bellwether; in Noth belhamel; and lastly, in several Fr provinces the belier is simply the belled-sheep, thus confirming the deriv. given.

Bis, adv. agam, encore; a Lat. word bis, twice, used as a prefix in bisaieul, bissae, biscait, etc. By changing i into e (see § 71) bis becomes bes in bisaigre, besaigre, besaigre, besaigre, v.; and this is reduced to be in betwee, q.v. By changing s into r (see orfraie) bes becomes ber in berlue, q.v. and in berouette, which has been control to brouette, q.v. Ber before l even assimilates its r into l (§ 168) as in belluette, later librette, q.v. Lastly, in the two words barlong, barroler, q.v., the prefix her becomes bar by changing e into a, see amender.

Along with these changes of form has come an important change in sense; bis in passing into the Romance languages takes a bad sense, which affects the rest of the compound. Thus the Sp. bis-ope (ht. twoeyed), Walloon be-temps (lit. double-time or weather), It. bis-canture (lit to sin , double), Cat. bes-compte (lit. confide account), signify respectively, squaring, badweather, to sing talse, a false account, Similarly the Fr. bescornu (lit two-homed), bistorie (ht twice-bent), have taken the sense of crooked, queer, and deformed. So also with bevue, bettue, a v, which etymologically do not deserve the bad sense given them by the Fr Luguage.

EOUCHER, sm. a butcher, properly one who kills 'bucks' (he-goats); BOUCHERIE, sf. the place where goat's flesh is sold (it was caten by the common tolk in the middle ages). The jealousy between corrorations in medicual times is well known, as is also the regour with which the division of labour was maintained and protected. As late as the 18th cent shocmakers, who made new shoes, might not act as cobblers; and the cobblers som to have often sued them at the law for infringing their rights. Similarly the medievil bouckers, i.e. the salesmen of goat's fiesh, were not allowed to selimert of any other kind; thus we read in the Statuts de la Velle de Montpelher, A.D. 1204. Ni el mazel de bocaria no sia venduda carn de feda- ' Merchants in boucherie are torbidden to sell lamb. Here the word boncherie viande de bouc (its proper seus) In confirmation of this deriv of boucher we may note the It. beccaro, derived in the same way from becco, the he-go it,

BOULEVARD, sm. a boulevard, bulwark, rampart. O. Fr. boulevart, boulevert, boulevere, introd, early in the 15th cent, from Germ. bollwerk, a fortification (§ 20). We know that originally the word was a term of inflitary art, meaning the terre-plem, or platform of the ramparts. The Boulevards of Paris were, in the time of Louis XIV, simply the line of fortifications round the city; this, planted with trees, became a fashionable walk, and the word boulevard

came afterwards to mean any walk or street planted with trees, a meaning quite foreign to its etymol, sense (§ 13).

BOULEVERSER, va. to overthrow, boule,- Der. bouleversement.

Boulimie, sf. voracty, diseased hunger, from Gr βουλιμία,

CHETIF, adj. poor, mean, bad; in 13th cent, chavif (Jonville), in 11th cent, cartif (Chanson de Roland). It. cattivo; from L captīvus, captīve, in Class Lit., but used in sense of chetif, mean, poor-looking, in Imperial times, as we see in the Mathesis of Firmneus Materinis, vin. 24 a treatise on astrology written by this Christian controversialist, who was a contemporary of Constanting, and died about A. D. 436: 'Vicesuna pars Sæittain, si in horoscopo inventa fuent, hommes facit maios gibbosos, captivos ridiculosque. How then his the word passed from its projer Lit, sense of 'captive' to that of 'ment' and 'weak'? A parallel Fr metaphor will help to explain it: the word chartre, which projectly means a prison, is also said in the Dict. del'Academie França se to signify the mescutene plithisis to which children are liable, the phrase un enfant est en chartre being used for a child attacked by this malady Popular superstition, in its faith in fairies and evil spirits, likeued consumption to a mysterious prison-house in which the sick person is held captive till he dies by an invisible hand: and thus the sick person. the chétif, is the 'captive' of that fatal |

malady. The L captivus having thus this double signification, handed it down to the Romance languages: thus It, cattivo is both 'captive' and 'bad.' O Fr., richer and fuller than the modern language, gave to the word chitte both senses; as we see in Jouville that St. Louis delivered les chétifs (i.e the Christian 'captives' of the Saracens). Modern Fr restricts the meaning to poor, bid Captivus becomes cantif by find  $\mathbf{v} = f(\S 142)$ , by  $\mathsf{pt} = t(\S 168)$ , and by  $\bar{\mathbf{a}} = ai$  (§ 54). Cattif (introd. into England by the Normans in the form cattff) becomes in the 12th cent, chartif by  $\mathbf{c} = \epsilon h$  (§ 126), in the 13th cent. chetif Chetif is a doublet by  $ai = e' (\S 103)$ of cattaf.

CORVEE, sf statute-labour, fatigue-duty drudgery; in 8th cent. corvada, in Charlemagne's Capitularies, from L. corrogata \*, lit, work done by command -Der. corve-The most interesting philological phenomenon presented by this word is the intercalation of a v which had no existence This intercalation was thus in Latin. effected: the medial g disappeared (see allier), and the word became corro-ata. which left a hiatus between the o and the a. In this case the Lat. often intercalates v, as from plu-ere comes plu-v-1a and not plu-1a; from apyelos, argi-v-us, not argi-us; from fluere, flu-v-ius, not flu-ius. This tendency is carried on in Fr.: thus from pluere comes not fleu-our, but pleu-voir; from paconia come pi-voine, not fi-oine; and this intercalation is even extended to words which origin illy had no hiatus, but in which the medial consonant has been ejected, thus making room for an euphonic v: thus from gra(d) ire comes gra-ire, gra-v-ir; from gla(d)ins, gla-ius plat-vee, from imbla(d)are \*, embla-are, embla-v-er; from po(t)ere, fo-ere, fou-vour; from para(d)isus, fara-is, far-v-is thus, finally, from corro glata, corro-ata corro-v-ata, which leads us to the Carlovingian form corvada, Fr. corvie. For the changes from corrovata to corvada. by the loss of o, see § 52; for -atn - ada = ee see § 201.

doublet. For ol = on see § 157.

drops his tail; from O Fr cone In heraldic language a hon countd is one with his tail between his legs. Animals which, when atraid, drop their tails are called couards, whence the word takes the sense of timid, cowardly O. Fr coue is from L. cauda. For au = ou, and for loss of d, see alouette. The It. codardo, deriv. of coda, contains this derivation. For the termination -ard see & 106 .- Dei. couardise.

COUCHER, va. to lay in bed; vn. to lie down. O.Fr. colcher, It. colcare, from L. collocare (Suctonius, Caligula, 24). Collio caro regularly losing its o (see § 52), becomes coleare, a form found in the Lex Salica (tit. 60): 'Et si tunc . . . legem distulerint, sole colcato' (= du soleil conché). Colcare becomes coucher; for ol = ou see § 157; for c=ch see § 126. COUDE, sm. the chow; from L. cubitus. Cúbitus becomes cub'tus by the regular loss of I (see § 51), then the b of bt is dropped (Hist, Grain p. 81), then t becomes d, see § 117, and u = ou, see § 00. - Der. condée, condover, conder.

COUDRE, sm. a nut-tree O. Fr. coldre, from L. corylus Córylus, regularly contrd. (§ 51) into corlus, has had its 1 transposed (see sangloter), and becomes col'rus. (The word colrina i is to be seen COULISSE, f. a groove, slide. See couler. in a 9th-cent. document.) Col rus becomes O. Fr. coldre by regularly intercalating a d, see Hist. Gram. p. 73, whence COUP, sm a blow, stroke. O. Fr. colp., It. colpo, condre by softenme of into ou, see § 157 -Der condraie, conar et

COUDRE, va to sew O It. conside from L. consuere; writter cosere as early as the 8th cent By the very regular transformation of ns into s, consucre became cosuere, s and, then the diphthong ue was simplified into e, not rare in Lat, C. mortus for mortuus, and the Appendix ad Probiin having febrarius for februarius. Adamantinus Martyr says expressly 'batuali quae vulgo batalia dicuntui.

Cósere, accente i on the first syllable, becomes cos're (see § 51) Now  ${f s}$  and  ${f r}$ cannot stand together, see Hist. Gram. p. 73), and consequently when they come together phonic letter is intercalated, sometimes t sometimes d: thus cos're became cos-d-re. COUPL, sf. a cup, vase; from L. cupa. and the accented o becoming a diphthong on (see § 81) the word becomes consdre, this loses its a see § 148), and finally presents its modern form coudre.

from L colpus, found in the Germanic Laws: 'Si quis voluerit alterum occidere et colpus et fallierit.' (Lex Salica, tit 19) Colpus is a contrd. form of cólăpus, tound in the Lex Alamannorum. For the regular loss of atomic a see § 51. Colapus in its turn is a secondary form of Lat colaphus, by a change not unusual in popular Lat. of ph into p: thus at Rome men said stropa, ampora, for stropha, amphora, as an old Lat grammarian tells us. For change of O. Fr. colp into coup see § 157 .- Der couper (properly to give a blow with a cutting instrument).

To the initial sounds so (scribere), sm (smaragdus), sp (sperare), st (status), which were hard to pronounce, the Roman people carly prefixed the letter i to divide the two consonants in pronunciation. As carly as the 4th cent we find in Roman inscriptions ispatium for spatium, istare for stare, istatua for statua, ispiritu for spiritu, istabilis for stabilis, ismaragdus for smaragdus. This i soon became o (see \$ 71), and in the 5th cent. we find in Christian inscriptions the forms estatua, espatium; in Mcrov. Diplomas especiem, esperare, estudium. change of se into esc, sm into esm, sp into ey, st into est, went on in Fr. in such words as spitium, espace. Since the 16th cent, many of these words have been again modified by loss of the s, see § 147, and the suppression is marked by the acute accent on the initial e, as in statum, état. Even farther, a false assimilation led to the prefixing of e before words which had no Latin 8; whence we find corticem, écorce; carbúnculus, escarboncle, etc.—Der, ésperance, désepérer,

Espiègle, adj. frolicsome; of hist, origin, see § 33. Espiègle is a word of the 16th cent., at which time a very popular German tale (Euleuspiègel) was translated and introduced into Fr. under the title of 'L'Histoire joyeuse de Till U'espiègle.' In this story the hero performs a number of waggeris and tricks. This 'Histoire de Tiel Ulespiègle,' or, as it was written, 'Histoire de l'Espiègle,' soon became popular, and the word espiègle came to be used of a tricky, mischievous spirit. ETRE, v. subst. to be. The Lat. esse being defective borrowed six tenses (fur, fueram, fuero, fuerim, fuissem, forem) from unused fuere. The Fr être is composed of three verbs: (1) fuo, whence pret. fus (fui), and subj. fuse (fuissem); (2) stare, whence the p.p. eté, O. Fr. esté (status); (3) esse, whence all other tenses, and specially the mf. pres. être, O. Fr. estre.

To such defective verbs as velle, posse, offere, inferre, esse, too short to provide the usual infinitives, the vilgar Lat added a termination re, and thus assimilated them falsely to verbs of the second conjugation. Thus in the 6th cent, we may find in Mcroy, documents volére for velle, potere for posse, offerrere for offerre, inferrere for inferre, essore for esse.

Essero was regularly contrd. (see § 51) into ess'ro; sr became str (see accroître), whence estre, now être; for loss of s see § 147. This etymology is farther confirmed by the form the verb takes in the other Romance languages, as It, essere, Sp ser, Port, ser, Prov. esser. If any doubt whether essero ever existed we may reply by producing documentary proofs. In Gruter's Collection of Roman Inscriptions may be read the following epitaph found in Rome in 2 7th-cent, church, 'Cod estis fur

et quod sum essere abetis,' i. e. 'quod estis. tur: et quod snm, esse habetis.' In a senes of Carolingian Diplomas we have A.D. 820, 'quod essere debuissent'; A.D. 821, 'essere de beneficio'; A.D. 836, 'quod de ista ecclesia Vulfaldo episcopus essere debuisset. The same suffix ro is to be seen in compds, of esse, such as adesse, etc., as e.g. in a chartulary of A.D. 818. 'quam meemus adessere.' Faither proof is unnecessary. No one now beheves that être is from L. stare. How could stare (accented on the a) have become être? And again, how could stare produce the other Romance forms. Prov. ever. It. evere, Sp. and Port. ver? Lastly, we know exactly that stare has given us the Fr. ester, which still remains in the phrase ester en justice ('stare in justitia'). Ester still remains in certain compds as rester, re-state, arrêter, ad-re-state (() Fr arrester).

LE, pers. pron. m. the; formerly lo, Sp. lo, from L. illum. For the use of the pron. ille as an article sec Hist, Gram, p. 160. Il-lum becomes le just as 11-la becomes la, il los les, il-luic (-illi-line) lia, illorum leur, by the loss of the first syllable (which is short in the Lat, comedians). Ille, illa, illum are almost enchire, as we see by the compounds ellum, ellam in Terence, contractions for en-illum, en-illam, by dropping il, en(il)lum, cu(il)lam; whence en'lum, en'lam. ille, not being accented, lost its first swlable in Fr.

1. Il-lum, thus reduced to 'lum, becomes lo by losing m (see ja) and by u=0 (see § 93). O. Fr. lo becomes le just as jo and go become je and ce.

2. Il-los, reduced to los, becomes les by the same softening of o into e.

3. Illi-huic, contrd. to ill'huic, whence illuic by loss of h (see § 135), becomes Légitime, adj legitimate; from L. legiti-

illui, to be seen in an inscription in Imperial times (Mur. 2088, 6): 'pltimum illui spiritum.' Illur losing its initial syllable becomes lui.

Roman, adj Romance; sm. a romance, novel; properly a tile, true or false, told in romance, i.e. in Old French. The Lat. phrase 'lingua romana' in Carolingian times meant the growing Fr. language, the 'rustic Latin,' as opposed to the 'lingua latma,' which was the name for the Class. Lat. We read in the Life of S. Adalbert, Abbot of Corbie (A.D. 750), that he treached in the vulgar tongue with a sweet abundance' ('Quem si vulgo audisses, dulcifinus cinanabat'); and his biographer distinguishes still more plainly between the learned Lat. and the Romance or vulgar tongue: 'Qui si vulgari, id est romana lingua, loqueretur, omnium aliarum putaretur inscius, si vero teutonica, enitebat perfectius; si latina, in nulla omnino

From this form romana comes the adv. romanice\*, in the phrase 'romanice RONFLER, vn. to snore. Origin unknown; loqui.'
